

Customer Information to TSCA

The Toxic Substances Control Act (TSCA, in force since 1976) regulates the manufacture and use of hazardous chemicals in the USA. It gives the Environmental Protection Agency (EPA) the authority to assess chemical substances and minimise risks to health and the environment. Manufacturers and importers are required to provide information on chemical properties and potential risks. TSCA enables the EPA to restrict or ban hazardous chemicals¹. It is crucial for professional users to understand the TSCA requirements in order to avoid legal consequences.

The TSCA list is updated regularly, usually every 6 months.

To the best of our knowledge and based on current information, our product range does not contain any of the five listed PBT substances (persistent, bioaccumulative and toxic – see Section 6(h) of TSCA): PIP 3:1, DecaBDE, 2,4,6 TTBP, HCBd and PCTP.

Where lead is used as an alloying element, this is not prohibited².

We recommend regularly checking the latest data with the relevant authorities.
