

Customer Information to SCIP

As a distributor of fasteners and connecting elements, we take our obligations as a distributor and/or importer under the REACH Regulation (EC 1907/2006) very seriously. This includes providing comprehensive information on substances of very high concern (SVHCs) and informing our business partners. We fulfill this obligation through labeling within the supply chain (Art. 33 REACH). Please refer to our customer information on REACH.

Products that contain or may contain substances of very high concern (SVHCs) in excess of 0.1% by weight, as listed in the current SVHC list, must also be labeled not only within the supply chain but also identified in waste management in accordance with Article 9(2) of the Waste Framework Directive. This is done by reporting to the ECHA's SCIP database.

The SCIP database stores information from all companies that supply or import products containing 0.1% by weight of SVHCs within the EU. Consumers and waste management companies can thus access this information. This ensures that SVHCs can be used and disposed of in an environmentally sound manner and with the greatest possible protection of health throughout the entire product lifecycle and during disposal.

We maintain a database containing this information and include SCIP information on our commercial documents. You also have the option of submitting a separate request.

According to Article 6(1) of the REACH Regulation No. 1907/2006, a minimum quantity of 1 ton of manufactured or imported substances per year is required to trigger an obligation to register in the SCIP database or to qualify for registration. We source our products on the global market, though we prefer SVHC-free goods or those from European importers. Therefore, Schrauben-Preisinger GmbH is currently under no legal obligation to register with the SCIP database.

We also interpret sustainability and environmental protection (ISO 14001) to mean that we are increasingly adding lead-free products to our product range and offer consulting on lead-free alternatives.
