

TOUCHLESS CHECK-IN HERE!

1. Place your assigned QR code in front of the kiosk camera.

- Make sure that the QR code is fully in frame, approximately 1-foot distance from the camera, and is parallel to the surface of the camera.
- The QR code should be well lit. Avoid any glare or heavy shadows across the code.
- If you are experiencing issues scanning your code on an electronic device, try turning up your screen brightness.
- For any issues scanning a printed code, make sure the code is not chipped or obstructed.

2. Once your QR code is scanned, you are done!
