Watch First

Help Center

SkyShepherd Components

- Collar Strap
- GPS Unit
- Yard Monitor Antenna
- Yard Monitor
- Power Cord x 2
- Wall Adapter x 2

GPS unit + collar strap = SkyShepherd collar

Next Step

Set Up

01

Pro Tips:
Position the collar high up on your dog's neck beneath the base of the ears. It should be tight without restricting your dog's breathing. When threading the collar strap through the GPS unit, make sure the metal grid is facing toward your dog's neck.

Getting Started

- **Review all literature in Help Center**
  - Scan QR codes on previous page
- **Review SkyShepherd Terms of Service**
  - Scan QR code below
- **Charge GPS unit** and plug in Yard Monitor, near a window
- Download **SkyShepherd app** and **create a SkyShepherd account**
- **Add your GPS unit**(s) to your account in the app
  - Scan QR code below
- **Connect** your Yard Monitor to your **Wi-Fi network**
  - Scan QR code below
- **Fit collar strap** on your dog **without** GPS unit attached (one finger should fit under strap)
- Take collar strap off and **attach GPS unit** to strap
- Put collar strap with GPS unit on your dog and **verify fit** (tight without restricting breathing, up high on neck, above other collars, nestled into fur)
- **Do not leave SkyShepherd on your dog indoors; plug into charger when not in use for best experience**

Terms of Service

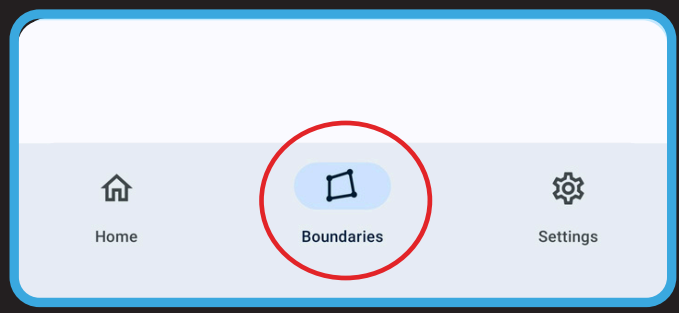

Add GPS unit to your account

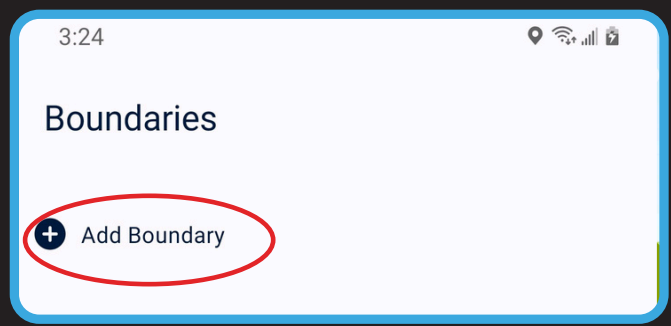

Connect Yard Monitor to Wi-Fi Network

Creating a New Boundary

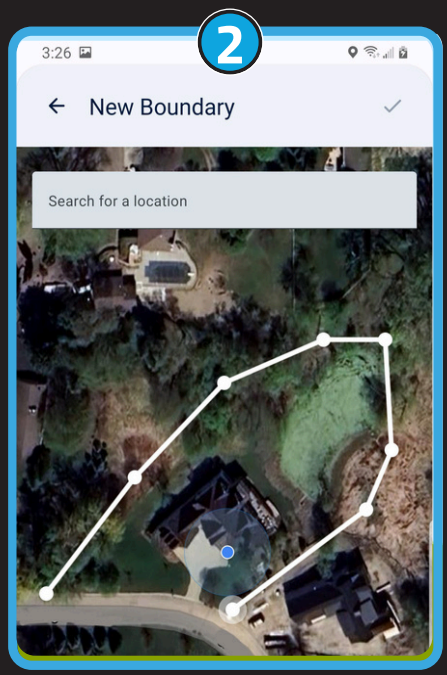

02

GPS varies, so leave room.
Allow: 10 ft from dangers like roads, etc. 50 ft between your house and boundary perimeter; taller houses need more. Dense tree cover will also affect location accuracy.

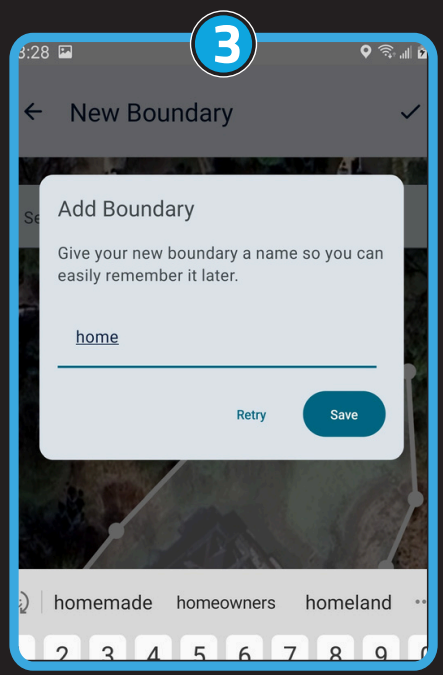

1 Make a boundary in the app by tapping points on the map

Tap the first point you made to complete the boundary shape

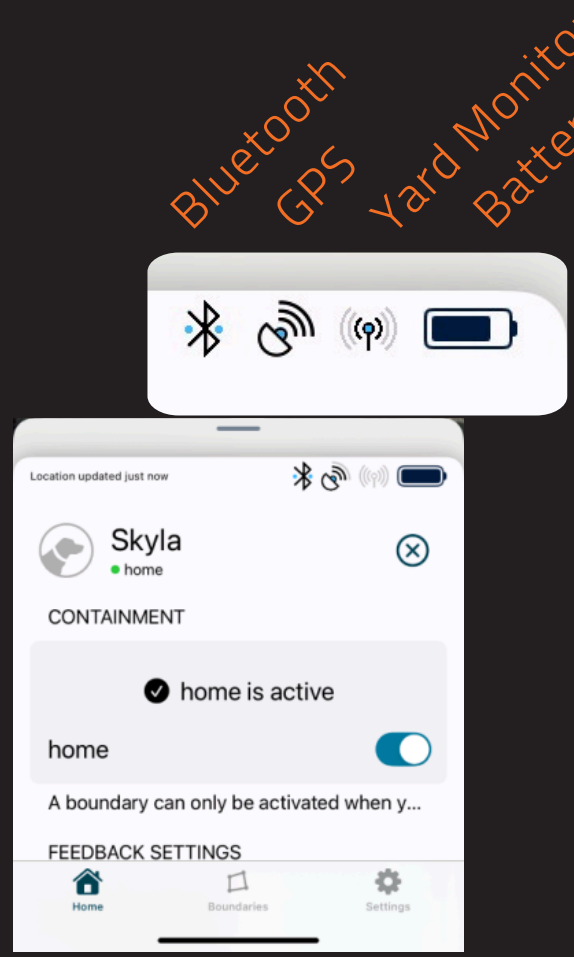

Name the boundary and save it once completed

03

Acquiring GPS Signal

- Go outside. Stand in an open area and hold up the collar (not by the GPS unit) so that your hand doesn't block the signal

04

Exploring Feedback Zones Without Your Dog

- Stand well inside the Safe Zone of your boundary
- Make sure the Feedback Mode is set to “Standard” in the app
- Activate the boundary
- Turn on Training Mode
- Walk in and out of the boundary to familiarize yourself with all the zones’ feedback, tones, and sensations
- Deactivate your boundary (you’ll activate it again for training, later)

SET-UP HAS BEEN COMPLETED

It's time to start training.

Find the "Training Guide"

Pro Tip:
Ask your local DogWatch dealer for your success plan

Pro Tip:
Do not leave the collar on your dog indoors

SKYSHEPHERD®
