

PENETRATION TESTING PROGRAM

ABOUT OUR PEN TESTING & MONITORING PROGRAM

Our penetration testing and monitoring program will help customers understand the operational and technical vulnerabilities of their IT infrastructure and support any of their compliance requirements.

OUR PROGRAM DELIVERS

- **INITIAL PEN TEST** - We use real-world simulations to test the strength of your current cybersecurity solutions and IT security stance.
- **VULNERABILITY MONITORING** — Ongoing monitoring of your vulnerabilities and remediation tasks to shore-up the identified vulnerabilities.
- **DARK WEB SCANNING** - Ongoing monitoring of your domain and the identification of email addresses that are found on the dark web.
- **VULNERABILITY MANAGEMENT** - If elected, Sedona provides management solutions that remediate vulnerabilities discovered in near-real time.

CUSTOMERS WHO USE OUR PEN TESTING SOLUTIONS

AVAILABLE PENETRATION TESTS

EXTERNAL IP TESTING

In this test we explore the vulnerability of accessing your network from outside the firewall.

INTERNAL NETWORK & SEGMENTATION

This test we explore the vulnerabilities from inside the firewall and across sub-networks. In particular, we look at the ability to move laterally across your internal network.

MICROSOFT 365 & AZURE

In these tests we explore the vulnerabilities of your Microsoft 365 Tenant and Azure cloud environment.

WEB APPLICATION

In this test we explore the vulnerabilities of your web applications and the accessibility of the data behind these applications.

PUBLIC API TESTING

In this test we explore the vulnerabilities of your Public APIs and the accessibility of the data behind these APIs.

PHYSICAL TESTING (BLACK TEAM)

This test goes on site to explore the vulnerabilities of your facilities and access to sensitive data.
