

An aerial photograph of a long, straight dirt road cutting through a vast olive grove. The rows of olive trees are neatly spaced on both sides of the road. In the center of the road, a herd of dark-colored Wagyu cattle is gathered. Two utility vehicles, possibly ATVs or small trucks, are driving on the road; one is further ahead near the cattle, and the other is closer to the foreground. The sky is bright blue with scattered white clouds. A large, dark brown circular graphic with a thin gold border is centered in the upper half of the image, containing the text 'OLIVE GROVE' and 'WAGYU'.

WELCOME TO OLIVE GROVE WAGYU

OUR STORY

Olive Grove Wagyu began on the Meron family farm, “Bonni Foi”, located along the picturesque Macintyre Brook River. The Meron family manages the grove holistically, producing premium Wagyu cattle. Family-owned and operated since 2016, they are dedicated to creating a sustainable way of life for generations to come. Through hard work and a passion for farming, the Olive Grove Wagyu herd has expanded across South-East Queensland and Northern New South Wales, with a focus on breeding exceptional Wagyu cattle.

Olive Grove Wagyu is proudly family-owned and operated by the Meron family, who hail from the Goondiwindi region. The team includes Johanne and Yigal Meron, along with their two sons and their families: Boaz and Sam, with their children Tilly, Freddy & Wally, and Jonathan and Letitia, with their son Alfie.

Situated along the banks of the Macintyre Brook River, Olive Grove Wagyu was founded on a deep commitment to producing exceptional Wagyu beef. The Meron family has long been immersed in agriculture, with a profound respect for the land and its produce. This legacy of hard work, integrity, and a shared vision to create a brand synonymous with premium quality inspired the establishment of Olive Grove Wagyu.

WHERE WE ARE

DIRECTIONS

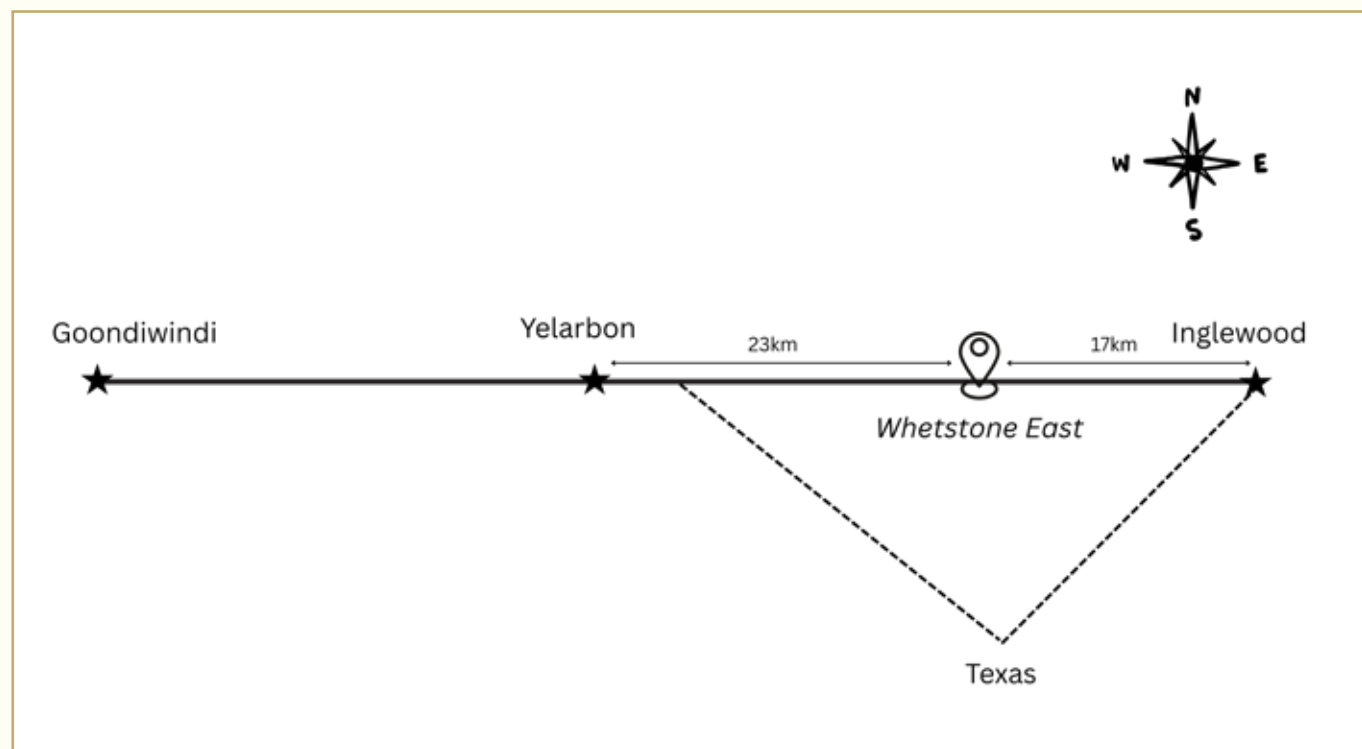

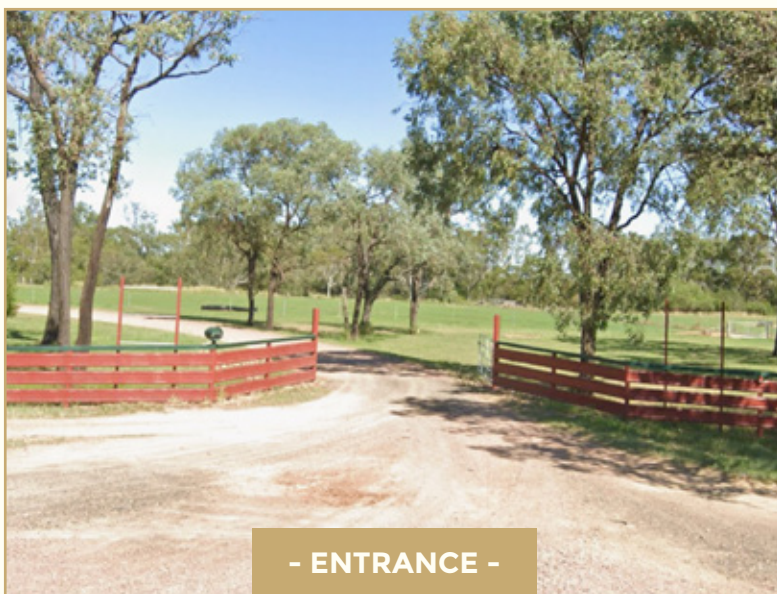

ADDRESS

Whetstone East

26076 Cunningham Hwy
Whetstone QLD 4387

Notes:

- Entrance is right on the highway
- Maps will indicate that the road is temporarily closed (this is the entrance to the property).

SELLING AGENTS

APL GROUP

Bruce Birch: APL Group

0428 363 063

bruce@birchrural.com.au

Ben Johnstone : APL Warwick

0455 964 487

ben.johnston@aplgroup.net.au

ONLINE PLATFORM

StockLive

Libby Tyrell

0400 265 915

Libby.Hufton@stocklive.com.au

- **SELLING METHOD**

The sale will be held on our farm facilitated by APL Group. The sale will also be interfaced through StockLive for those who cannot make the sale or wish to bid online. Please register in advance with one of our agents or online as the first lot commences at 2:00pm.

- **DELIVERY**

We are happy to assist with delivery of your bulls. We can deliver to your farm, major selling centres or collection centres free of charge up to 500km. Deliveries over 500km will incur \$/km rate to cover the cost of fuel.

- **PURCHASING AND INSURANCE**

Ownership of the bull is passed once the animal is sold at the fall of the hammer. The sale price of each bull is Excluding GST and 10% GST will be added to all sale amounts.

- **HERD HEALTH**

All bulls are up to date with their vaccination: 7in1, Pestiguard, Vibriovax and have been tested negative for pestivirus.

All bulls have undergone a semen test and morphology with results available upon request and with the purchase of each bull.

- **SAFETY NOTICE**

We take great pride in the temperament of our cattle and ensure the utmost effort has gone into keeping our bulls docile and friendly. However, the unfamiliar sight of a sale day may cause the bulls to have out of character reactions due to sound and movements of multiple people. Entry into sale pens is at your own risk and please ensure you are respectful to the animals. No children are allowed in the pens with the bulls.

- **MEDIA**

There will be videos for each bull published on our website and STOCKLIVE. Photo lots will also be available.

Steps To Register

Using your chosen device visit www.stocklive.com.au.

Click **BID** located next to the sale you wish to participate in.

New Users

To create an account click **REGISTER**. Fill in your details, then click **CREATE BIDDER REGISTRATION**.

You will receive an email prompting you to confirm your account, create a password, accept Bidder Account T&C's & Privacy Policy.

Congratulations! Your StockLive account has been created.

Existing Users

LOGIN & find the sale you wish to bid on, click **Request to bid** & **Accept terms to bid**.

Notified via email when your agent has approved you for bidding.

On Sale Day

Visit www.stocklive.com.au, when the sale is flashing **LIVE**, click **BID** to watch, listen & purchase.

Invoicing & delivery will be carried out as per your registration & account details by the respective selling agents.

WAGYU BREEDPLAN EBVs

AUSTRALIAN WAGYU GENETIC ANALYSIS

Wagyu BREEDPLAN is the genetic evaluation program implemented by the Australian Wagyu Association, which uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of performance and pedigree recorded cattle for a range of economically important production traits (e.g. weight, carcase, fertility). More than 600 scientific publications have been produced describing BREEDPLAN and its implementation for driving genetic progress across cattle breeds.

Wagyu BREEDPLAN includes pedigree, performance and genomic information from the Australian Wagyu Association's database, which is the largest globally available Japanese Black database used for the evaluation of the genetic merit of Wagyu cattle.

The Wagyu BREEDPLAN analysis provides the most thorough and accurate assessment of fullblood Wagyu genetics available outside Japan. The analysis includes over 300,000 registered Wagyu animals. Phenotypic records include 83,000 animals with birth weights, 100,000 with weaning (200-Day) weights and 65,000 with 400-Day weights. Carcase data includes 50,000 carcase weights, eye muscle areas and AUSMeat marble scores, camera marbling percent and camera fineness index measures.

ESTIMATED BREEDING VALUES (EBVS)

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, it is possible to make good estimates based on the performance of the animal and its progeny. These are called Estimated Breeding Values (EBVs) and these are the best estimate of an animal's genetic merit.

Estimated Breeding Values for an animal may change as additional performance data or genotype information is provided for that animal or animals within that animal's pedigree. It is not unusual for EBVs to change, particularly where the EBVs are low accuracy (<50%). For hard to measure, or traits that can only be measured late in life, such as carcase and meat quality traits, EBVs provide the best estimate of an individual's genetic merit early in life to help inform management decisions.

Submission of performance data can have a large bearing on the estimate of an animal's genetic merit over its life and this will impact the genetic merit of the animal's progeny.

As the accuracy of an EBV improves over time (along with more data and genotype information), EBV values will be more constant. Please refer to the section on Accuracy within this guide for additional information.

USING EBVS TO COMPARE ANIMALS

Wagyu BREEDPLAN EBVs can be used to estimate the expected difference in the genetics of two animals. The expected difference equals half the difference in the EBVs of the animals, assuming they are used in the same way (i.e. they are joined to the same animal/s). For example, a bull with a 200 Day Growth EBV of +20 would be expected to produce progeny that are, on average, 5 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +10 kg (i.e. 10 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

BENCHMARKING AN ANIMAL WITHIN THE BREED

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Wagyu animals. To benchmark an animal's genetics relative to other Wagyu animals, the EBV can be compared to the breed average EBV for the trait or the percentile table.

The current breed average EBV is listed in the Wagyu Breeding Guide while the current percentile table can be found on page 10.

ACCURACY

An accuracy value is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy, the lower the likelihood of significant change in the animal's EBV as more information is analysed for that animal or its relatives.

ACCURACY RANGE INTERPRETATION

Less than 50% = Low accuracy and should be considered a preliminary estimate. The EBV could change substantially as more performance information becomes available, however the EBV is still the best guide for genetic merit of the animal at that point.

50 - 74% = Medium accuracy, usually based on the animal's own performance records, genomics and pedigree.

75 - 90% = Medium-high accuracy and also includes some progeny information. Becoming a more reliable indicator of the animal's true value as a parent.

90% and above = High accuracy associated with a large amount of performance and progeny information.

FERTILITY AND BIRTH EBVS

Scrotal Size EBV (SS) (cm) an indicator of male fertility (semen quality and quantity) in Western breeds of cattle. Higher (positive) EBVs indicate higher fertility. There is also a small negative correlation (desirable) with the age of puberty and fertility in female progeny. The relationship between scrotal size and fertility in Wagyu is assumed, but not proven.

Gestation Length EBV (GL) (days) based on AI records. Lower (negative) GL EBVs indicate shorter gestation lengths which generally relate to lighter birth weights and easier calving.

Birth Weight EBV (BW) (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

GROWTH EBVS

200-Day Milk EBV (MILK) (kg) is an estimate of an animal's milking ability based on the calculated maternal input into the 200-Day Weight of a calf. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200-day weight of their calves.

200-Day Growth EBV (200) (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (400) (kg) is calculated from the weight of animals taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (600) (kg) is calculated from the weight of animals taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (MCW) (kg) is based on the weight of the cow when the calf is weighed for weaning, adjusted to five years of age. This EBV is an estimate of the

genetic difference in cow weight at five years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Breeders of steers wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

CARCASE EBVS

Carcase Weight EBV (CWt) (kg) is based on abattoir carcase records and live weight measurements (particularly 600 Day weight) and is an indicator of the genetic differences in carcase weight at the industry average slaughter age of 990 days. Larger positive values are more favourable.

Eye Muscle Area EBV (EMA) (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 420kg dressed carcase. A higher positive EBV indicates larger eye muscle area and therefore higher retail beef yields. Ultrasound, AUSMeat and Japanese Digital Image Camera measured Eye Muscle Areas from slaughter animals contribute to this EBV.

Rump Fat EBV (RUMP) (mm) estimates the genetic differences in fat depth at the P8 site of a 420kg dressed carcase. A higher positive EBV indicates more subcutaneous fat and earlier maturity.

Retail Beef Yield Percent EBV (RBY) (%) estimates the genetic differences in total (boned out) meat yield as a percentage of a 420kg dressed carcase. A higher positive EBV indicates higher percentage yield for the 420kg carcase weight.

Marble Score EBV (MS) (AUSMeat Marble Score) is an estimate of the genetic difference in the AUSMeat Marble Score in a 420kg carcase. Marble Score EBV utilises AUSMeat Marble score on a scale of 1 to 10 where 10 is equivalent to an AUSMeat Marble Score grading of 9+. Where results from the Meat Image Japan digital carcase camera are available, Camera Marbling Percentage and Marble Fineness are also used to calculate Marble Score EBV as the genetic correlations between these measures and AUSMeat Marble Score are very high. Larger positive values are more favourable.

Marble Fineness EBV (MF) (Marbling Fineness Index) estimates the genetic differences in the Marbling Fineness Index (degree of fineness of marbling fat) as measured by the Japanese Digital Image Camera. A higher more positive EBV indicates higher levels of marbling fineness.

INDEPENDENT AGENTS. UNCOMPROMISING RESULTS.

At APL Group, our independence is our strength. Free from corporate influence, we tailor every livestock sale to deliver what matters most to you – whether that's price, speed, discretion or peace of mind.

Armed with local knowledge and a strong network, we work efficiently and with integrity – always focused on the outcome that matters most to you.

WHATEVER YOUR 'BEST RESULT' LOOKS
LIKE – WE'LL HELP YOU GET THERE.

REFERENCE SIRES

OGWFR046

No longer alive this bull had it all. His first lot of F1 angus/wagyu carcass data came back with all marble score 8 carcasses and an average carcass weight of 458kg HSCW. R46 was a bull bred for maternal strength from a line of well structured and good milking females. He has passed this onto his progeny with the addition of excellent carcass qualities.

Top 1% BFI, +5 milk, double breed average for growth, +3.1 Marblescore

OGWFR046

OGWFS033

Your resident G113 son. S033 was bred out of our best donor cow at the time. Q049. S033 has three generations of high performing carcass producing sires. S033 is in 15 different registered herds with 187 registered progeny, 95% of his progeny are in the top 10% for the Breeder Feeder index. Highlighting the confidence we have in him to become the next generation super sire as the 3 sires in his pedigree are.

Top 1% BFI, +53 Carcass weight, +3.5 marble score

OGWFS033

IGWFM0352

A bull we have used early on in our breeding program trusting his pedigree has now proven himself to be one of the leading carcass performing bulls in the country. With his EBV accuracy for all his traits in the 90percentile, we have no doubt the young bulls in our catalogue sired by M0352 will go on to be true carcass performing bulls.

IGWFM0352

MYMFP0342

P0342 'United' needs no introduction into the wagyu world. He has stamped his authority on being a powerful bull bringing excellent phenotype and size into his offspring.

MYMFP0342

ADBFL0010

L10 is a son of arguably the best bull in the world outside of Japan for consistent high marbling and high EMA. L10 has also proved itself to produce exceptional carcass quality and has over 90% accuracy EBVs. The 4 main reasons we have used L10 was firstly his EMA, Marble score and overall balance in his progeny. Lastly, his fertility. In the hundreds of embryos we have made over the years, L10's fertility in the Artificial reproduction arena has been second to none and he has been an exceptional bull for us in all facets.

MYMFP0342

EBV PERCENTILES SUMMARY

Percentile bands for 2023 born Wagyu calves

For benchmarking, the average Wagyu BREEDPLAN EBVs for the 2023 born calves are tabled.

V184 is a son of one of our super sires R046 with great balance. V184 has been bred for fullblood or purebred herds. He would suit any production system. V184's dam shows great maternal ability and R046 compliments this cow with strong marbling and maternal traits. V184 is in the top 5% for all indexes and is well above average for growth and milk traits.

V297 is a Heterozygous polled bull out of our polled bull T037. T037 is bred for marbling with all of his genetics stemming from the Poll Wagyu herd. These potent marbling genetics that produced T037 have been crossed with our high growth heterozygous heifer to produce a balanced bull in V297. V297 is suited for any crossbred program from F2 up to purebreds.
