

A R C H I T E C T S

HDA Architects, Inc. is a family of like-minded professionals passionate about the practice of Architecture and the efficient and cost effective delivery of animal health care. Founded in 1998 and headquartered in

Rome, Georgia, with a satellite office in Dawsonville, Georgia, we bring an unmatched depth of experience to every project. With over 500 completed animal health projects nationwide, including humane societies, boarding facilities, and veterinary hospitals, we bring expertise, leadership, and vision to every project. Our practice focuses on the creation of safe, humane, sustainable environments that support the needs of animals, staff, and the communities they serve. We understand that today's animal shelters and care facilities are public-facing centers of education, adoption, and community engagement. We design with this philosophy at the forefront, crafting environments that foster wellness, operational efficiency, and public trust.

HDA Architects initially supplemented its animal health design work by designing various building types from dental offices to multifamily housing, as well as by working with municipalities across the Southeast. Our faithful dedication to excellence has earned us long-standing relationships with more than 100 cities, counties, and public agencies, in addition to our private clients nationwide. We take great pride in consistently delivering outstanding work, regardless of a project's size or complexity. Notably, HDA Architects has never defaulted, been terminated by a client, or failed to complete a project.

Our goal at HDA Architects is to provide complete architectural services that exceed our clients' expectations. We respond to the particular circumstances of each situation, addressing the subtleties of each client and end-user, through the character of space and the means of construction. Of course we strive to meet the aesthetic, functional and financial requirements of our clients, but those are the basics. We want to get to know you and your practice. What makes your facility unique? What sets you apart from your peers? Our firm lives and dies upon relationships. That is what we are all about.

Our Principal, Peter J. Hill, Sr., AIA, NCARB, is an architect with a long-standing commitment to the design of animal care environments. Peter is a nationally recognized speaker in the field, presenting regularly at events such as the North American Veterinary Conference, the Southern Veterinary Conference, and the International Veterinary Emergency and Critical Care Symposium, in addition to numerous state conferences. Peter is also a regular speaker at professional design forums including the Georgia Convention of the American Institute of Architects.

Our firm's principal and staff of architects, interior designers, project managers, and construction administrators are truly experts in the field of animal care. Our collective expertise brings unmatched depth and breadth of knowledge. We are supported by a trusted network of engineering and specialty consultants and are experienced in assembling collaborative teams tailored to each project's location, delivery method, and technical requirements.

We are ready to serve you and will be with you every step of the way, from the first brainstorming sessions to that first step through the door of your new practice. When you're ready to make your dream a reality, we'll be here to make it happen.

Our job as architects is to be your advocate throughout the entire process of creating your new building.

We are here to not only translate your wishes into state-of-the-art designs, but to ensure that those designs are code compliant, built to a high standard of quality, and completed within your allotted time and budget.

Here we have outlined every phase of the commercial building process and our services through each step.

DESIGN STAGE (6 months)

INITIAL FACILITY PROGRAMMING

Our approach to designing animal health facilities is methodical and deliberate. Generally, the first step in this process is understanding your needs and enhancing your vision. We know that no architect is capable of understanding the project better than the owner. Therefore, our first job is to listen to and learn from you. We start off with a document we call our Veterinary Design Questionnaire, which asks you key guiding questions regarding the proposed construction. Once you fill out the Questionnaire, we hold a kick-off meeting where we can get to know each other and establish channels of communication. At this meeting, we will establish a tentative project schedule and budget, discuss goals and objectives, and begin interviews with individual users. These interviews allow us an opportunity to study the current staff and space demands and make growth and needs projections. Also during the Programming phase, HDA performs evaluations of the available sites for the project. All good architecture is rooted in and optimized for its site. With this in mind, we will visit each site you are considering, evaluate each based on its circulation, utilities, visibility, grading requirements, and overall suitability, and make recommendations to help you make your selection.

2 weeks

SCHEMATIC DESIGN

Based on our initial meetings and interviews, the architectural team will begin generating schematic floor plans (the layout of the building) and building elevations (its exterior and facade). We will also develop a schematic site layout and perform a rough grading study. During the Schematic Design process, the owner's involvement is absolutely critical. Design is an evolutionary process and there are no 'one size fits all' solutions. Each design choice is custom tailored to your specific needs and we are happy to make any alterations you request so that you can get everything you want and need out of your new building. We also provide integrated interior design services, ensuring that the materiality, look, and feel of your space matches your vision. Once we have settled on the plans and elevations, we begin the task of creating the graphic and written instructions used by contractors during construction.

6 weeks

CONSTRUCTION DOCUMENTS

This phase is the end of the design portion of the contract, and marks the transition to construction. We and our team of consultants (which typically includes mechanical, plumbing, electrical, and structural engineers) create all the necessary drawings, specifications, and technical documents to construct your building. HDA will carefully review each of these documents for clarity, continuity, and quality. Once we have a complete construction document package, the design team conducts a formal quality control meeting with all team members and the owner. This is simply a final opportunity to make certain that the project design and documentation agrees with your vision. When the architectural team and owner deem the documents satisfactory, we submit them to the City or County code review agencies and the local Fire Marshal for comments. Any and all comments are addressed promptly before our final walk-through of the documents with these agencies to show complete code compliance.

12 weeks

BIDDING & CONSTRUCTION ADMINISTRATION

HDA's involvement does not end with the design phases. We continue our meticulous, detail-oriented approach through bidding and administration of the construction contract. During the bid phase, we will ensure that the project gets maximum exposure, sending numerous invitations to general contractors to stimulate interest in your project and facilitate competitive bidding. The Project Architect in charge will be your representative, maintaining strong communication and understanding throughout the bidding, and issuing any requested clarifying addenda expediently and concisely. Once the project is awarded and the General Contractor is underway, we will remain involved from the preconstruction conference through the closeout documentation and warranty inspection. Our job is to protect the owner's best interests while remaining fair and unbiased to all parties. We always endeavor to promote a sense of cooperation and teamwork. If and when a problem arises, we address it quickly and fairly. At the same time, we do not accept any substandard work, no matter how minor. HDA demands that the contractor and subcontractors fulfill the terms of their contract to the letter, with no exceptions. As the contract approaches its completion, we are involved in compiling the closeout documents expected of the contractor. We also revise our CAD files to exactly match the as-built conditions. Finally, we perform the punch list inspection requested by the contractor, where all of the design consultants perform a thorough examination of the built conditions and verify that it is built as it was designed.

9-10 months

Debbie Boone

Veterinary Practice Management
Consultant, speaker, trainer

“ Peter and I worked together planning a 10,000 sq. ft. veterinary facility. I enjoyed the fact that he was extremely knowledgeable but yet took my suggestions and questions into consideration. He truly listens to his clients needs and works with them to produce the best outcome.

Dr. Cassandra Cruzen

Animal Health Care Center

“ HDA Architects is a high-quality, first rate design firm. Peter, Jim, and staff have anticipated and met every need and requirement during our veterinary resort design/build project. They have provided responsive, personal, and professional support during every phase. I highly recommend HDA to anyone looking to build and/or expand their business.

Mike Lowe

Flint River Animal Hospital and
Bed 'n Biscuit Boarding

“ We have total satisfaction with HDA Architects. Our veterinary supply vendors have sent several veterinarians contemplating new facility construction for a tour of our facilities. With our recommendation they have all used HDA for their projects. No better endorsement can be made than word of mouth from satisfied customers!

Dr. Russell Sprinkles

Grace Animal Hospital

“ HDA Architects was the best investment of our entire journey into building our dream hospital. Pete, Jim, and the team were always there to guide us along the way. Several times during the build, HDA went toe to toe with the builders to assure that we got the exact hospital we were promised without compromise. Every phone call was promptly answered and results were immediate. I could not have been happier with our choice of architects and continue to have an excellent relationship with their team even after the build.

A R C H I T E C T S

Now that you've gotten to know us and our process, we'd like to introduce you to some of our work.

What follows are overviews of seven of our favorite projects from the past decade.

OUR PROJECTS

In late summer 2021, the leadership team at Kind Animal Care identified the pressing need to expand their facilities to better serve their community. The existing structure could no longer accommodate the growing demand for high-quality veterinary care and boarding services. Recognizing this challenge, they trusted HDA to design a solution that would not only meet their immediate needs but also allow for long-term growth and adaptability.

KIND ANIMAL CARE

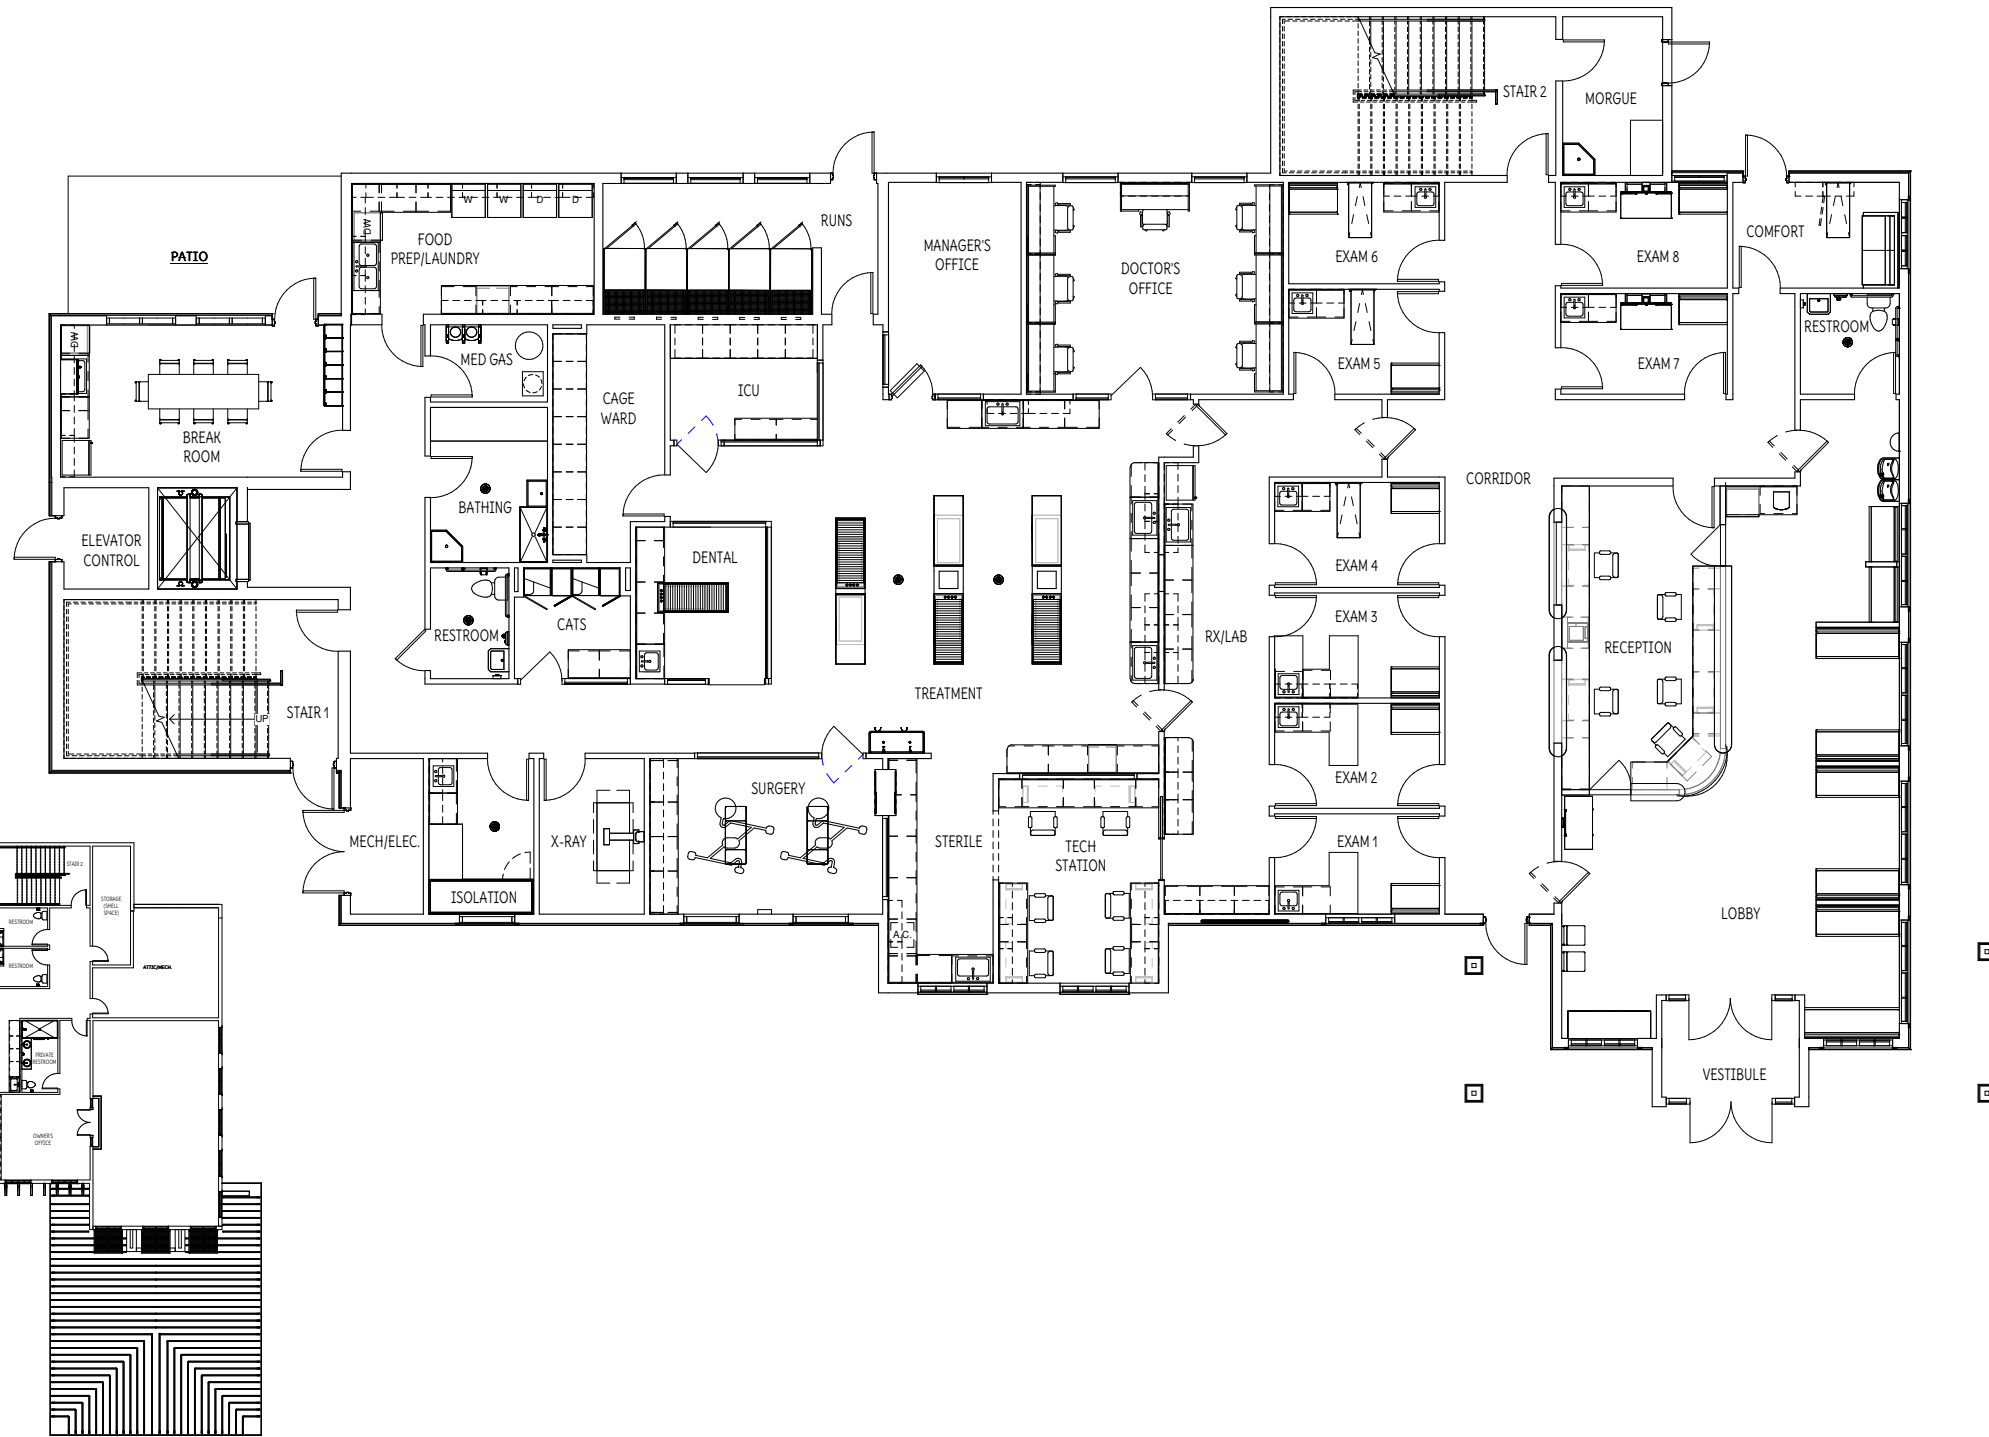

Spring Hill, Florida

2024

\$4,821,375

Drs. Mike & Julie
Noyes
(352) 688-9911

Kind Animal Care
2460 Anderson
Snow Rd,
Spring Hill, FL
34609

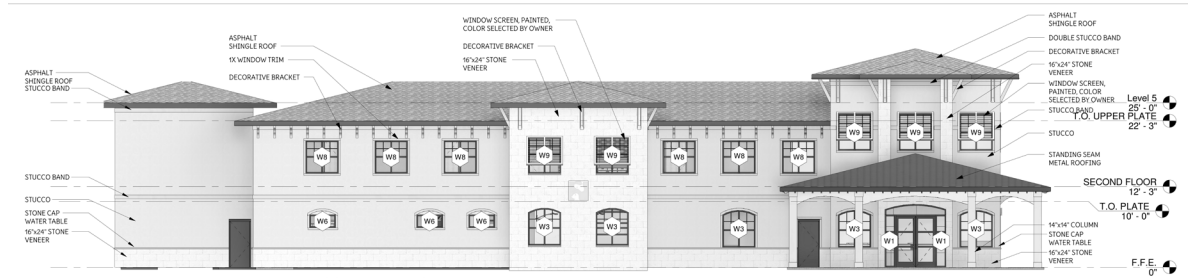

The resulting design features two state-of-the-art buildings: an 11,000-square-foot, two-story animal hospital and a 10,000-square-foot, single-story boarding facility. The hospital's vertical layout optimizes space, offering advanced medical treatment areas, surgical suites, diagnostic facilities, and administrative offices. This configuration ensures efficient workflows while supporting a higher patient volume and the latest veterinary technologies.

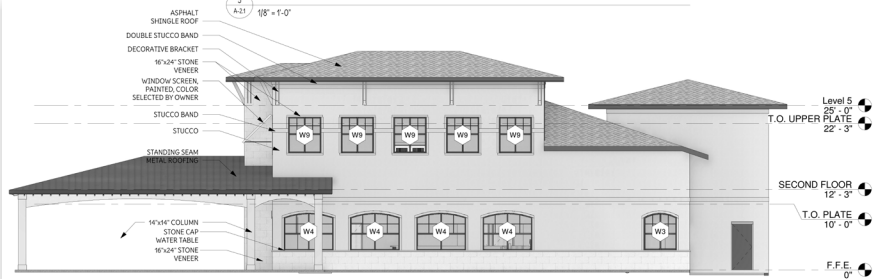

The boarding facility was designed to provide pets with a secure, comfortable, and stress-free environment during their stay. With spacious kennels, separate zones for different species, and engaging play areas, the building prioritizes the animals' well-being, creating a tranquil and nurturing atmosphere.

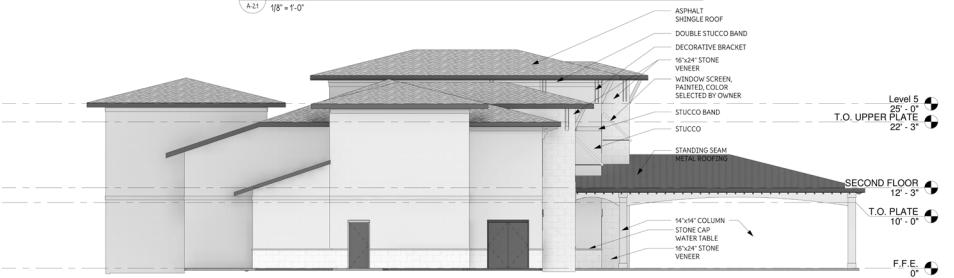

This project underscores Kind Animal Care's commitment to meeting the evolving needs of their community, ensuring both pets and their owners receive the highest level of care and service.

Nance Rd,

Huntsville, AL
35811

Designed with care in mind, this Alabama practice offers high end workspaces in a creative atmosphere. After several years of working for other doctors, Dr. Kevin Lowe decided it was time to set up shop for himself. Knowing he would need help, the first person he recruited was his father Mike Lowe.

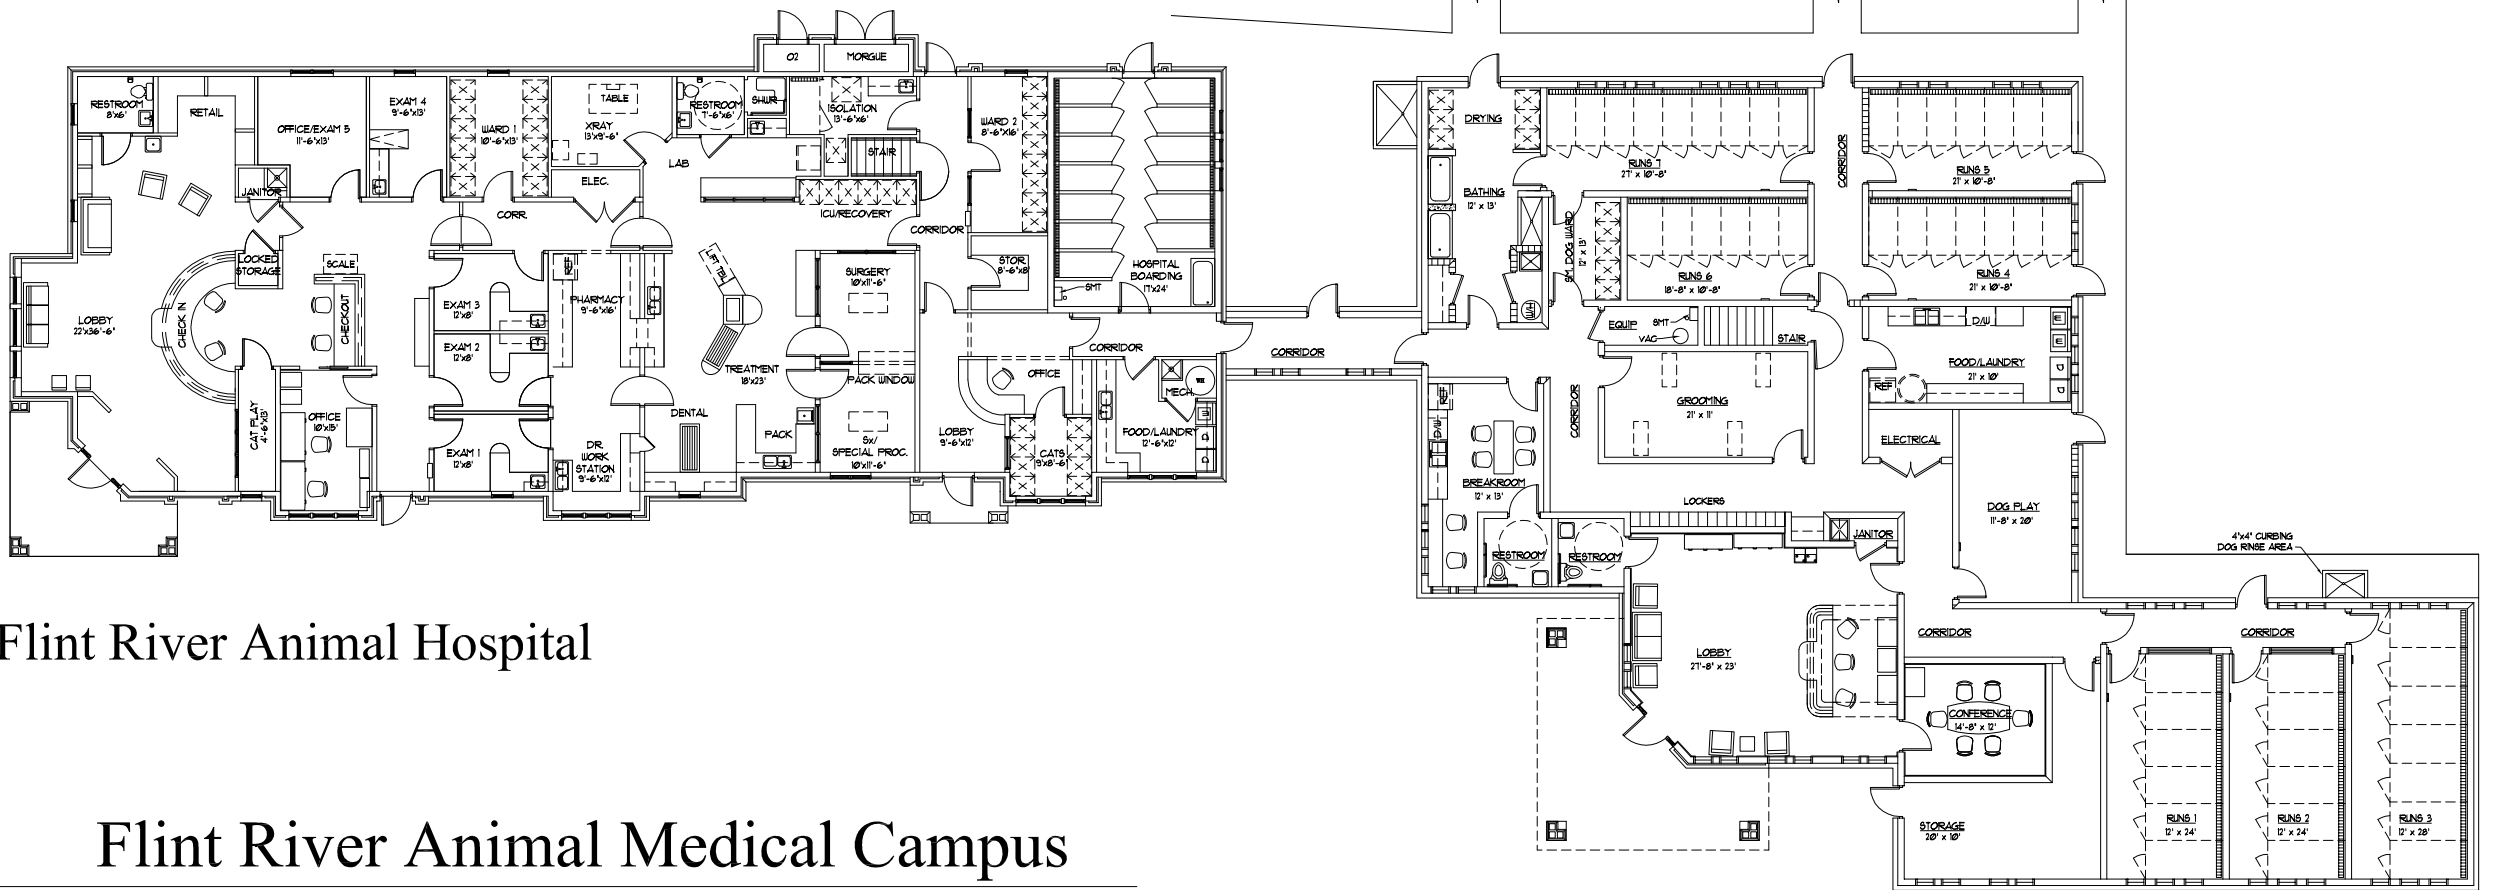

FLINT RIVER ANIMAL HOSPITAL

Huntsville, Alabama

The project that would become the next chapter in Dr. Lowe's career began at a dinner table with himself, his father, and the design team at HDA Architects.

From the very beginning, the project was centered around the details. Dr. Lowe and his father were of course involved in the overall design, but also in the electrical and HVAC systems.

The goal was to construct a building campus that would support their tagline: "Best Care for Pets and their People," in other words, a commitment to superior veterinary service.

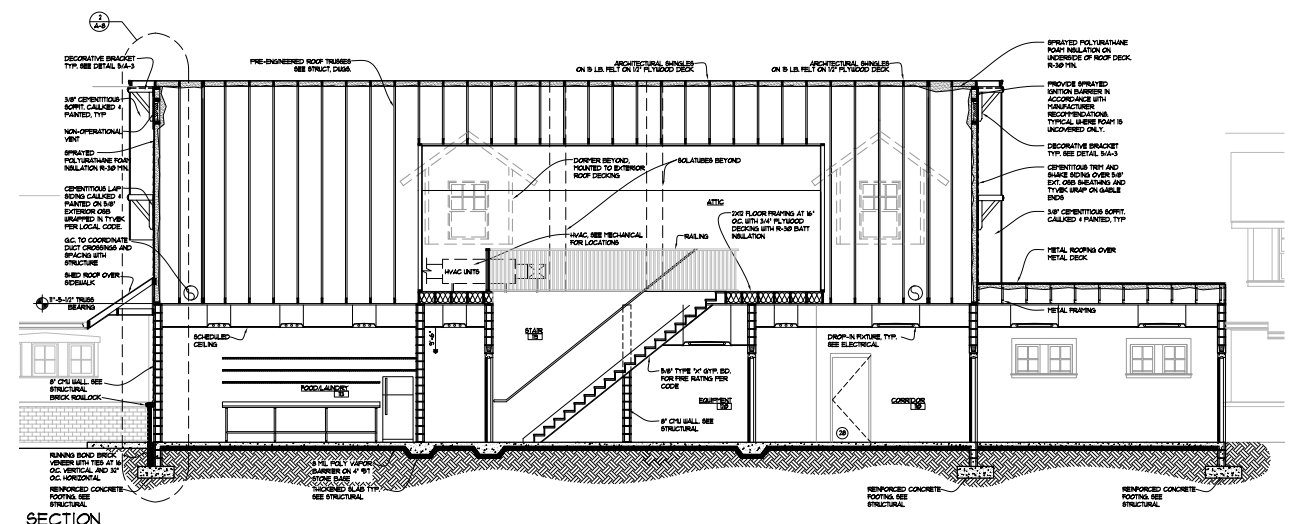

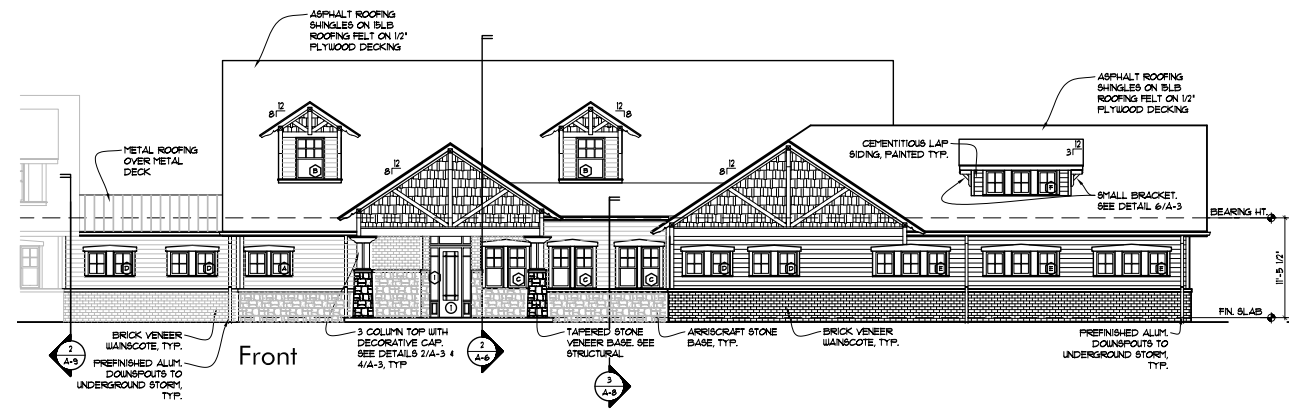

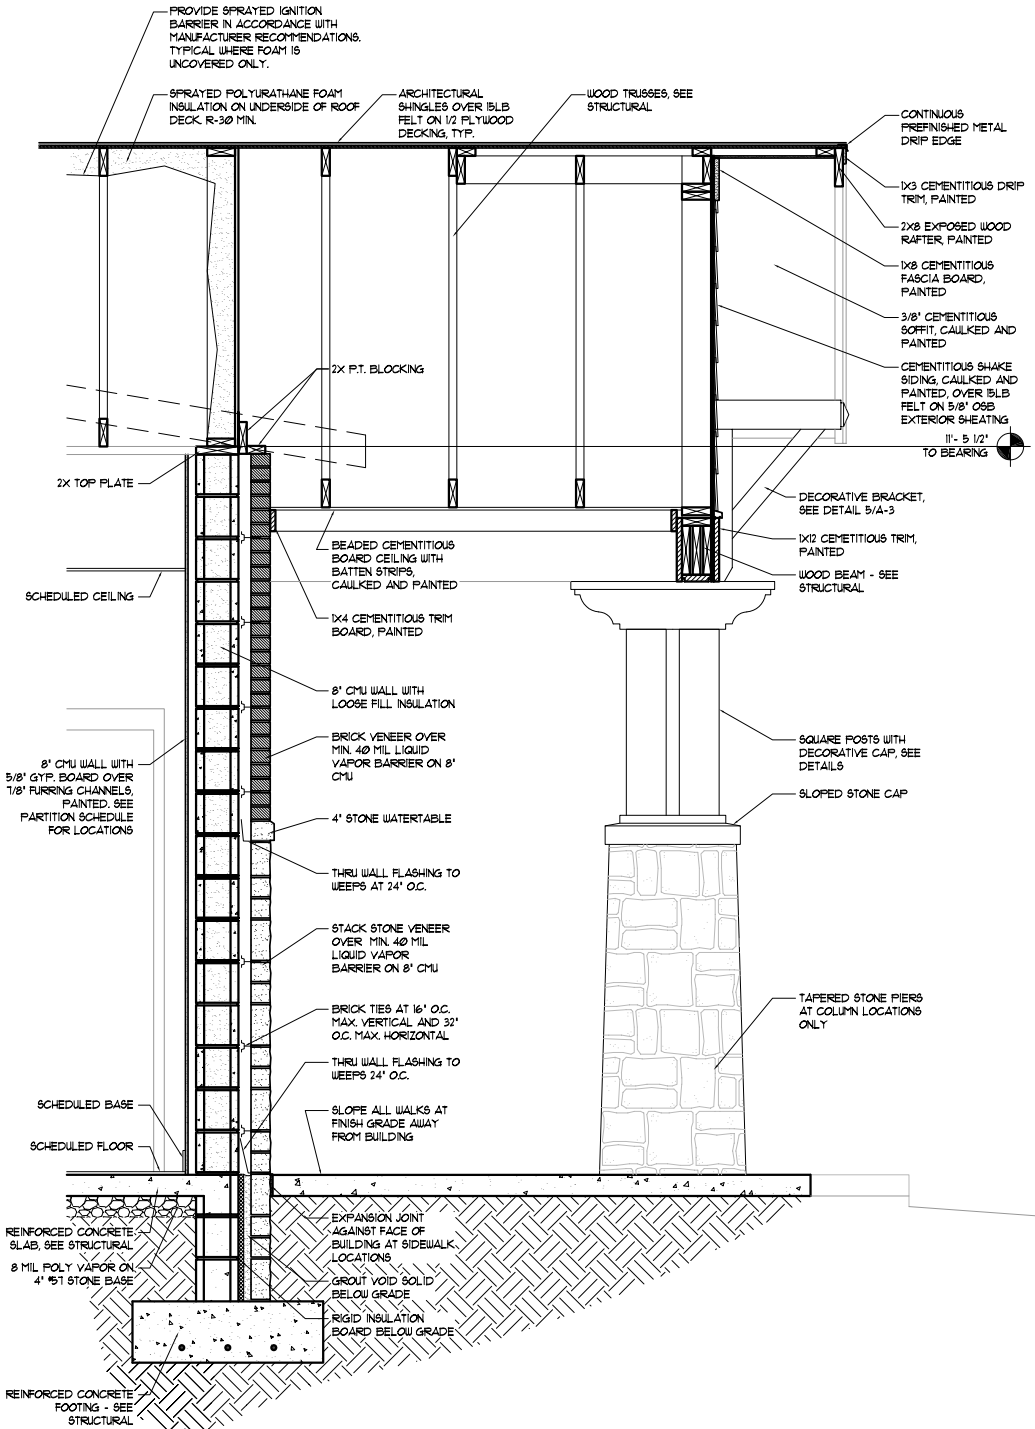

Flint River Animal Hospital

Flint River Animal Medical Campus

Bed 'n Biscuit Boarding Facility

They wanted their clients to have a complete “WOW” experience when visiting the full-service campus. We delivered this in the form of a uniquely inviting exterior aesthetic, a warm and homey feel in the floor plan and color palette, spaces for client education, and state-of-the-art high-performance technology to support both facility operation and medical service. This project is a 2015 HD Merit Award Winner.

Dr. Carla Hubbard

(703) 501-6070

Critter Care

749 15th Street

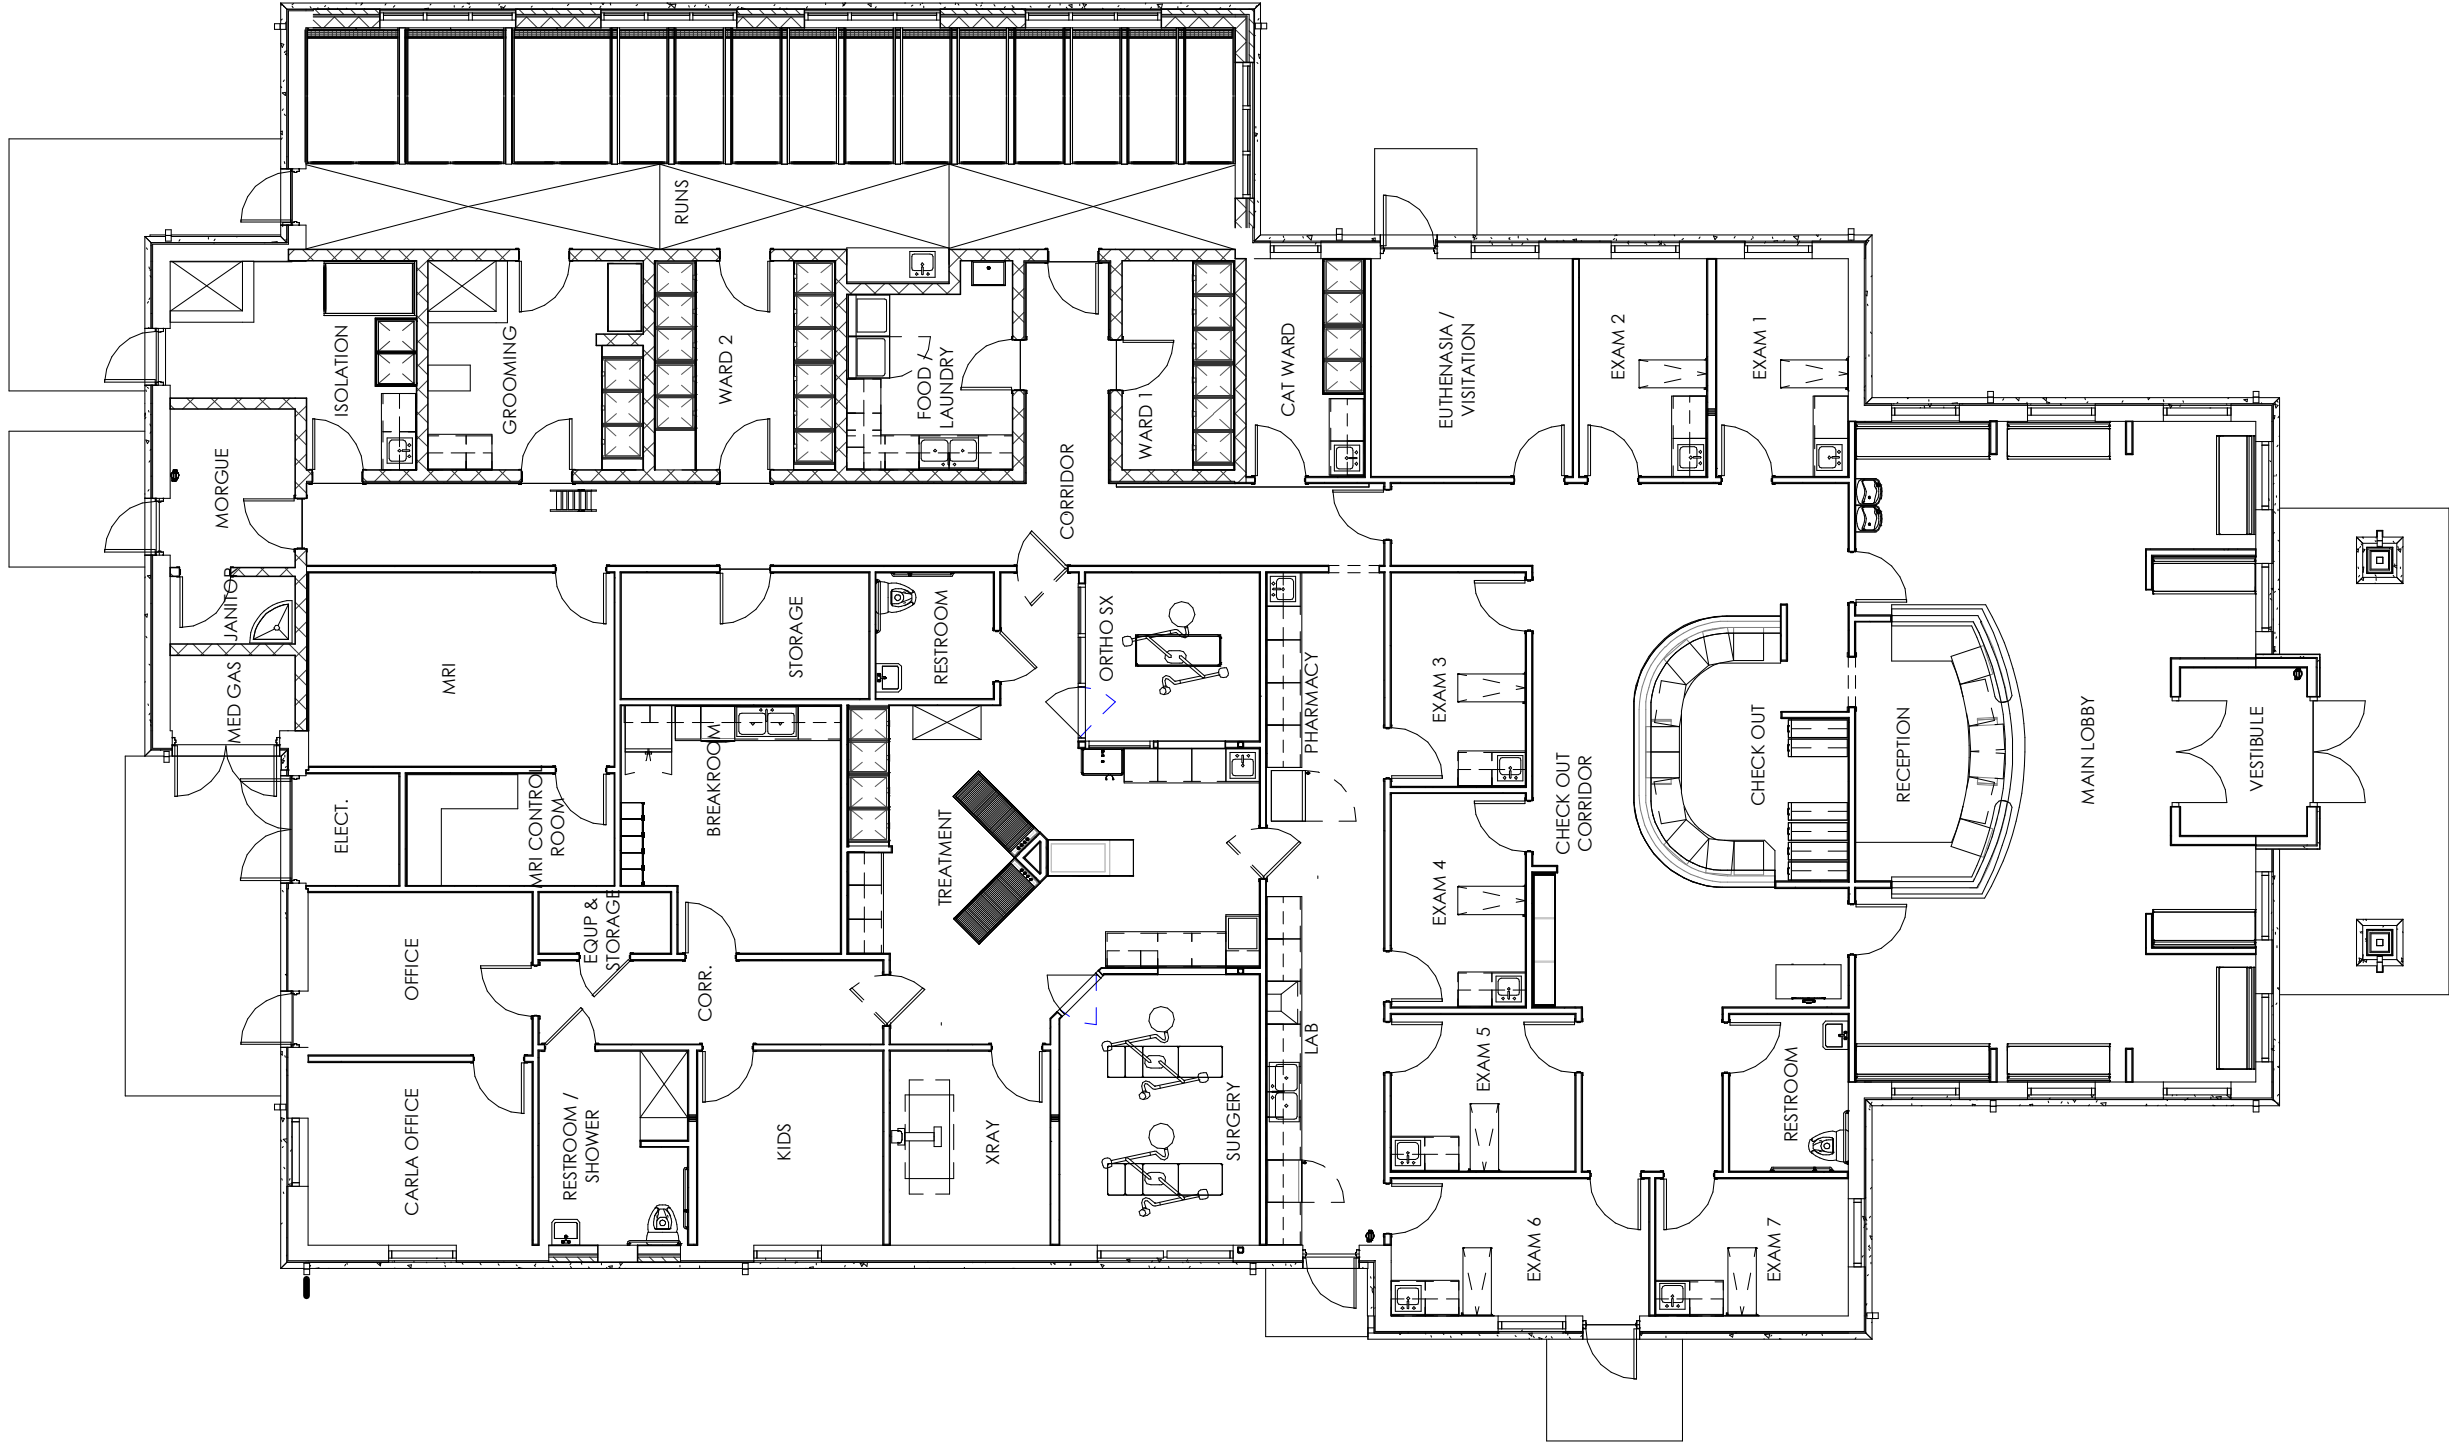

Panama City, FL
32405

Critter Care is a veterinary clinic with a heart and love for animals. Their overarching goal is to offer affordable and extensive healthcare for all animals in the Panama City area. The practice started in 2015 and quickly grew. After three years, they increased their staff, and soon realized they needed more space.

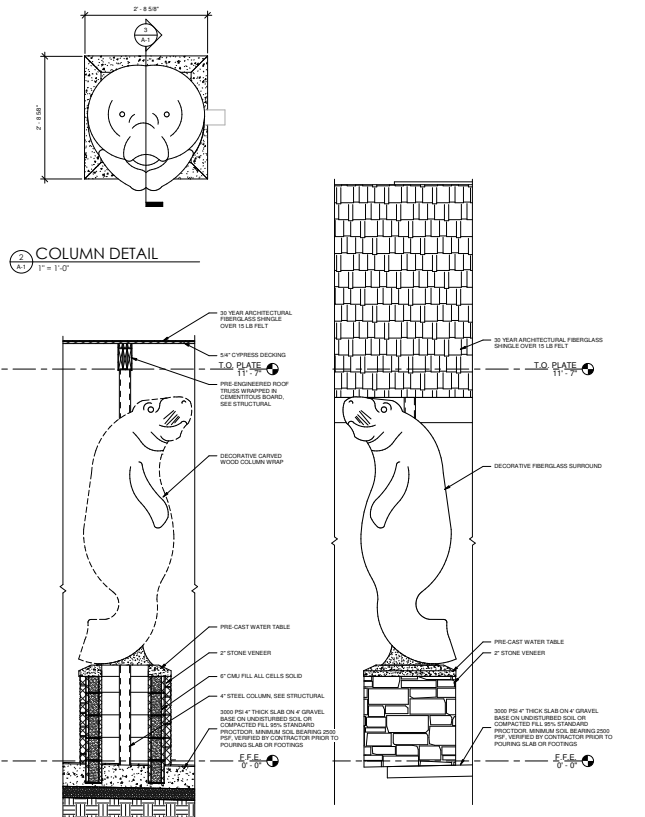

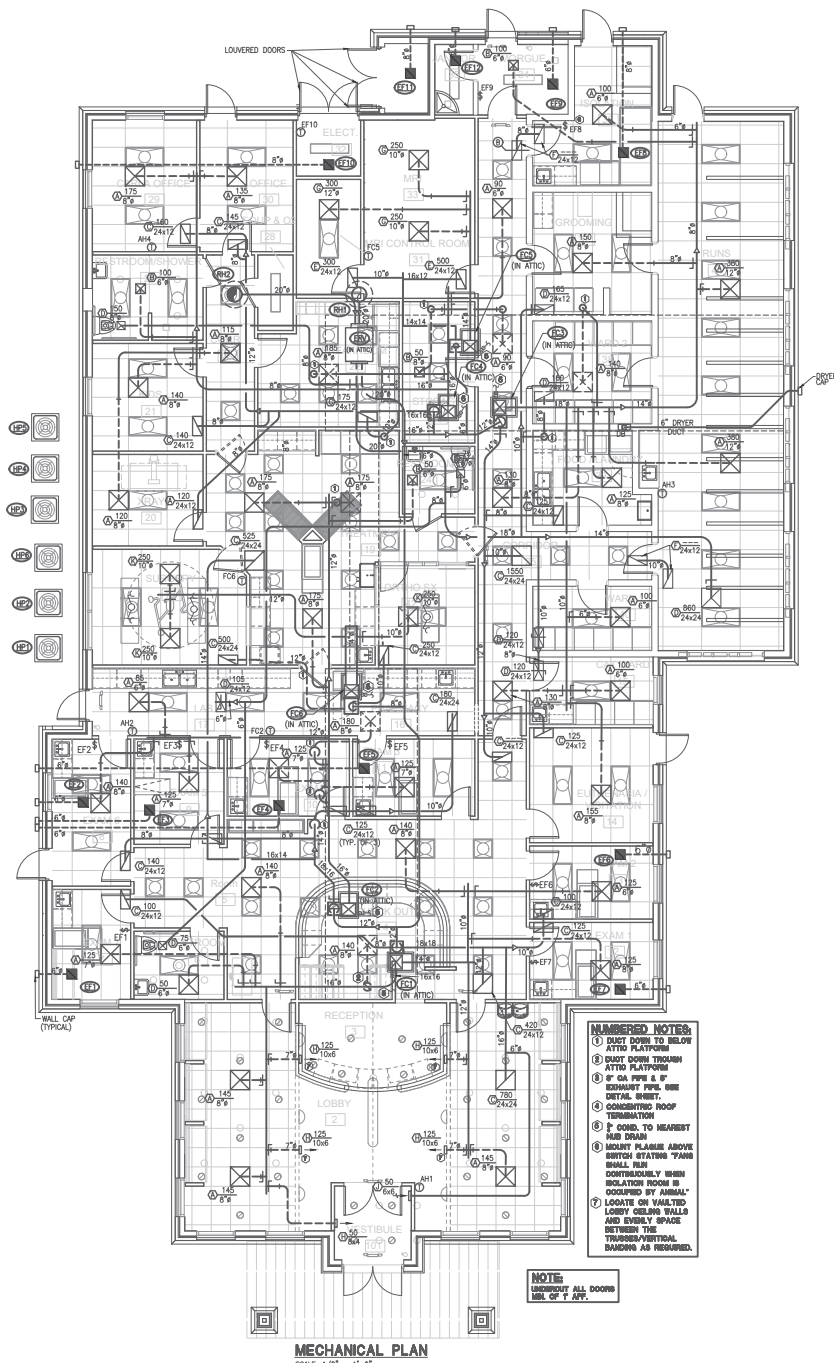

Dr. Carla Hubbard came to HDA hoping to build an animal hospital that could grow into a multi-building campus. After getting to know Dr. Hubbard and her goals, HDA got to work on the first stage of her dream campus in late 2018. The hospital is equipped with multiple surgery suites, exam rooms, and critical care rooms, a euthanasia suite, dental suite, lab, and waiting room built with clients and patients in mind. We also foregrounded energy efficiency in the design, creating a cost-efficient and more environmentally-friendly facility. The hospital primarily serves dogs and cats, but has accommodations to serve large and exotic animals as well.

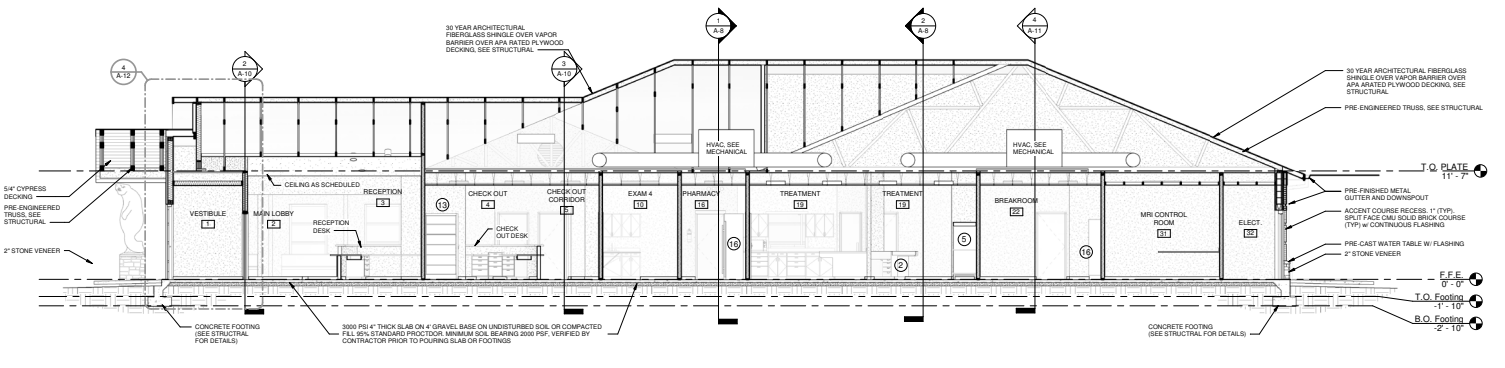

Construction of the Critter Care animal hospital began in 2020, and after some pandemic-related delays, Dr. Hubbard's new hospital is open and has become a staple service to her community.

The new Grace Animal Hospital was thoughtfully designed to provide exceptional care in a warm, welcoming environment. While working with Dr. Russell Sprinkles and his wife Rosan, we recognized that their primary focus was to promote the health and wellbeing of companion animals while strengthening the bond between pet and owner.

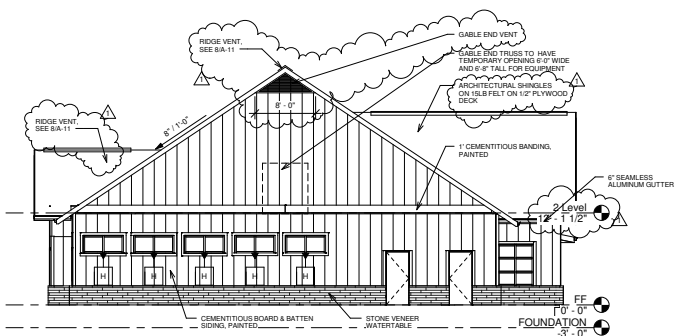

Dr. Sprinkles wanted his love for animals to shine through the doors of his new practice in a way that makes everyone inside feel like family. The hospital was built to reflect his compassionate, family-centered approach, and showcases our ability to combine technical complexity with aesthetics.

The design blends state-of-the-art medical capabilities with a comforting aesthetic that helps pets and their owners feel at ease the moment they enter. Natural light, calming colors, and comfortable seating create a soothing atmosphere, while efficient layouts and modern exam rooms support the hospital's focus on quality care. The curb appeal and signage are gifts that keep giving to Dr. Sprinkles.

Dr. Ron Betteker
(470) 209-7222

AECOB
2095 Hwy 211, NW
Braselton, GA
30517

In February 2021, the leadership team at Animal Emergency Care of Braselton (AECOB) initiated plans for a major expansion. As their patient base increased, it became clear that their existing facilities were no longer sufficient to meet the demand.

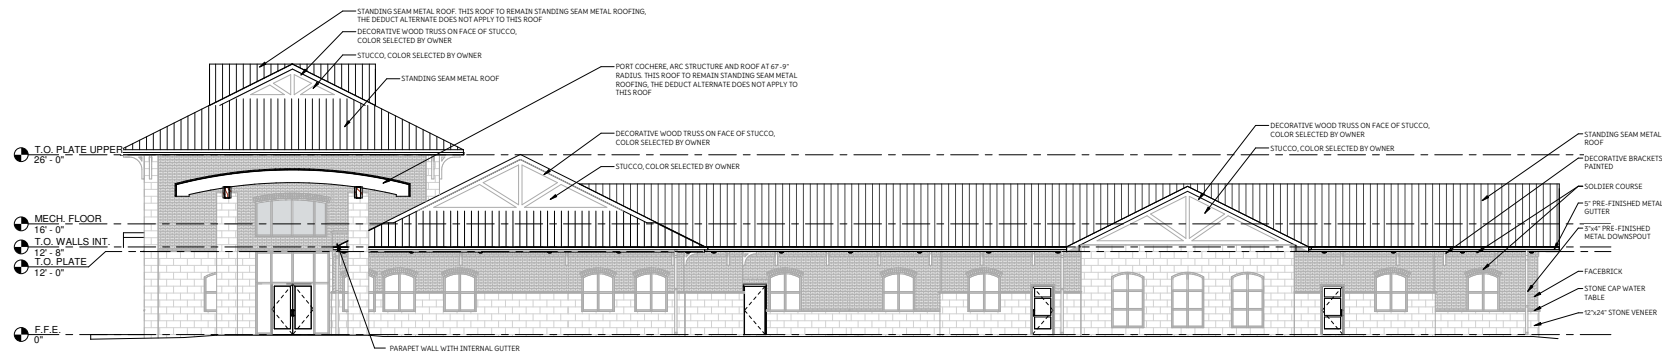

To address this, AECOB began the construction of a new, state-of-the-art emergency hospital designed to provide comprehensive and specialized care for critical animal cases. This new facility, totaling 10,000 square feet, is split into two distinct components.

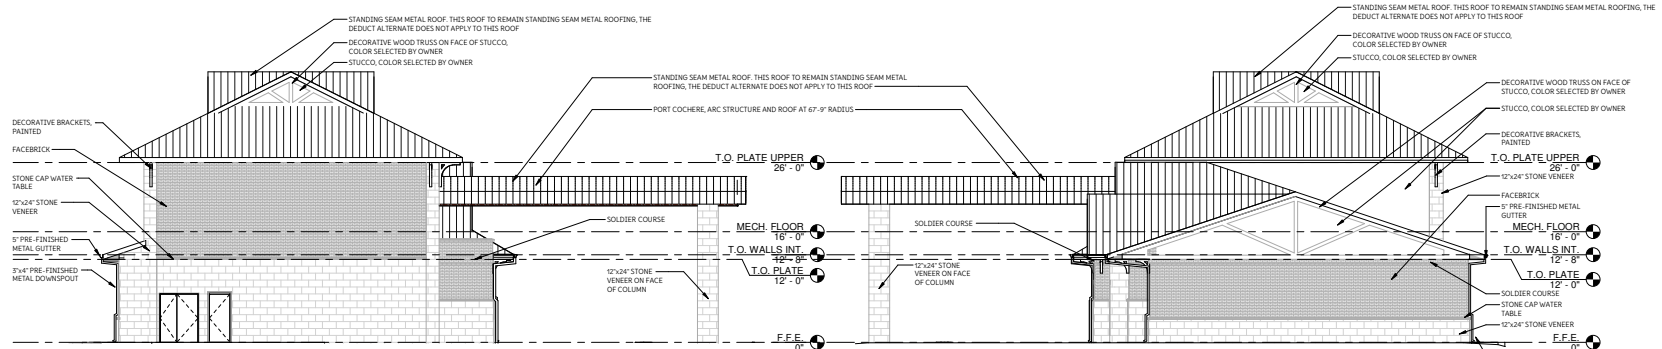

The first is a 5,000 square foot emergency hospital, which houses cutting-edge treatment areas, advanced diagnostic technology, surgery suites, and recovery zones. The second component is a 5,000 square foot shell space, designed to accommodate future expansion.

This flexibility ensures that AECOB can seamlessly grow its services in the years to come, responding to the evolving needs of the community without disruption. The emergency hospital itself was designed to streamline operations and create a welcoming, efficient environment for both the medical staff and the pet owners in crisis.

A.2.1 1/8" = 1'-0"

RIGHT SIDE ELEVATION
A.2.1 1/8" = 1'-0"

REAR ELEVATION
A.2.1 1/8" = 1'-0"

Each aspect of the facility, from the flow of patient intake to the design of the surgery rooms, has been meticulously planned to support AECOB's mission of providing life-saving care. This expansion represents a significant milestone for AECOB as they continue to build on their reputation for excellence in emergency veterinary care, offering top-tier medical services in a facility designed for the future.

Dr. Cassandra Cruzen came to HDA Architects with a dream of building a full-service animal boarding, grooming, and daycare facility in Madison, AL. Dr. Cruzen acquired a piece of property next to the existing animal hospital to use for her project.

In September of 2018, Dr. Cruzen's dream started to take shape, as our team began designing the healthcare and boarding facility. Construction began in May of 2020 and was completed in January 2022. The beautiful design, state-of-the-art equipment, and spacious layout create a welcoming and peaceful environment for both pets and owners.

Dr. Cruzen and the team at AHCC opened their doors at the beginning of 2022, and could not be happier. As of March 2025, plans are nearly complete for a second boarding facility. This project serves as an example of ideal boarding facilities where fear-free animal comfort is the top priority.

PAMLICO ANIMAL HOSPITAL

Washington, North Carolina

In February 2019, the leadership at Pamlico Animal Hospital recognized that their existing facility was no longer sufficient to meet the growing demand for their services. A more organized layout and additional space were essential to continuing their mission of providing top-quality care.

3005 John Small Ave,

Washington, NC 27889

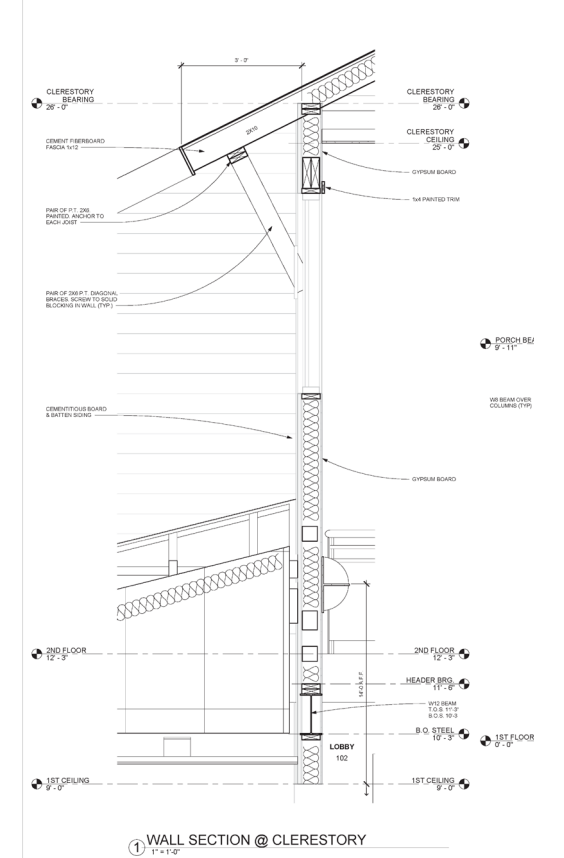

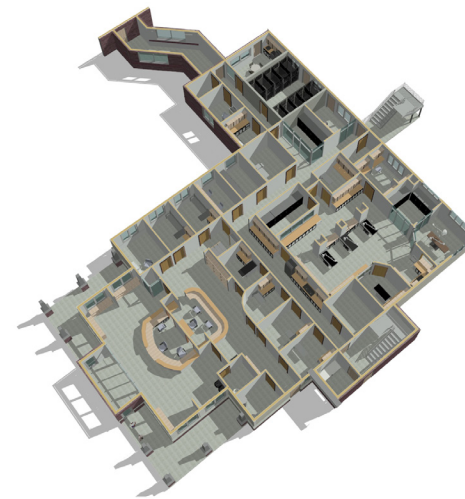

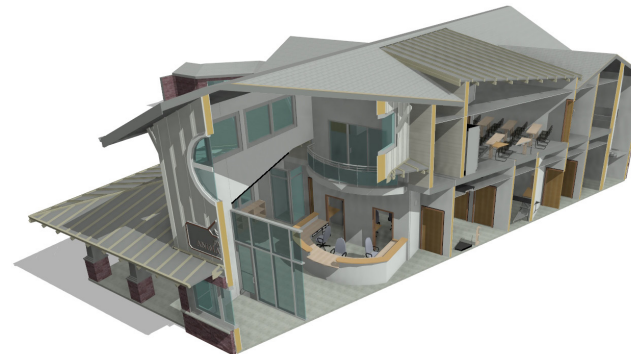

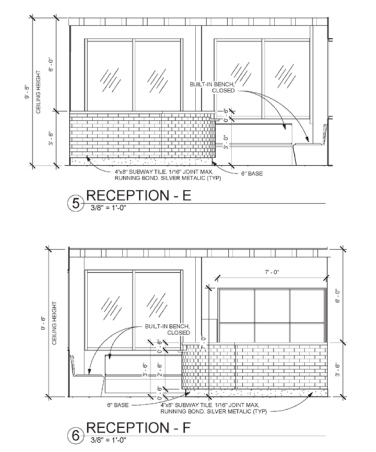

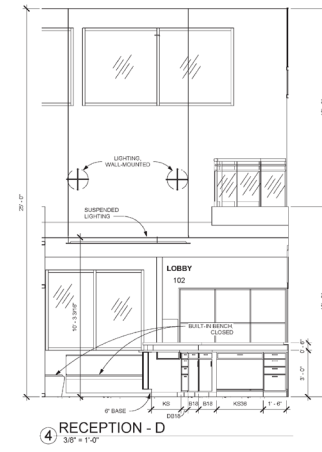

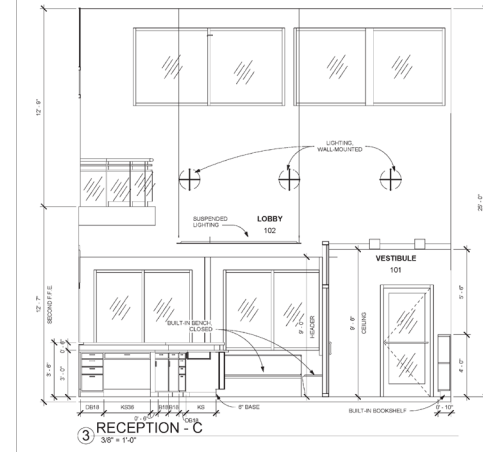

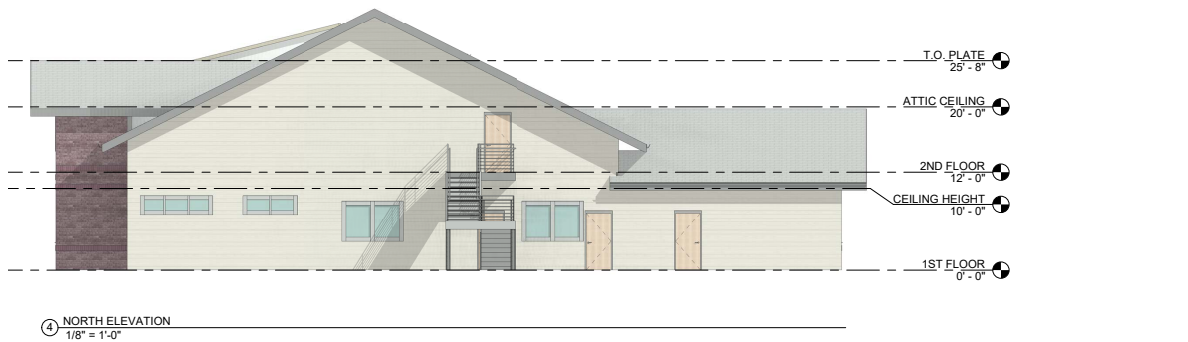

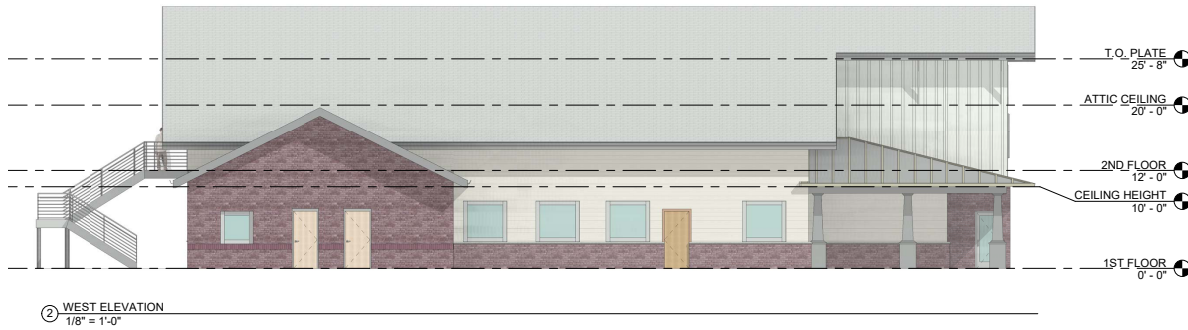

To address these challenges, they reached out to HDA Architects to develop a plan that would not only accommodate their current needs but also position them for future growth. The solution was a renovation of their existing building, transforming it into a modern, 6,000 square foot Boarding and Animal Day Care facility. This newly designed space is tailored to offer a comfortable, secure environment for pets while streamlining operations.

The renovation creates dedicated areas for boarding and day care, featuring spacious kennels, play zones, and specialized care areas to support animal well-being. Enhanced administrative spaces and optimized workflow designs allow staff to deliver high-quality service with greater efficiency.

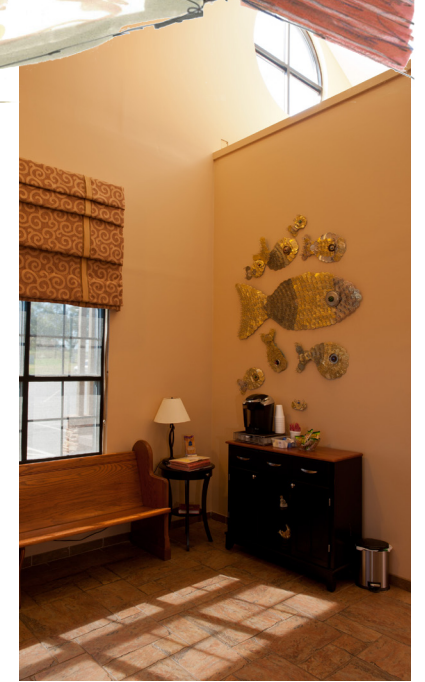

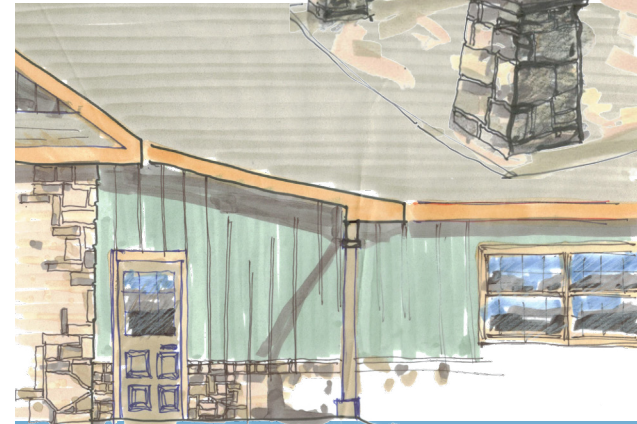

HDA Architects has decades of experience in animal health architecture. It has been our specialty since the 1990's, and one in which we take great pride.

You've now seen a selection of our more recent projects, but we wanted to take a moment to give you a look into our archive.

These are a few of our exceptional projects that exemplify the innovation, effectiveness, and longevity of our designs.
