

# The Bouquet Speculum

The **Bouquet Speculum** is an innovative medical device designed to enhance comfort, visualization, and ease of use during pelvic examinations and procedures. Its unique design features five flexible petals that open radially, providing an unobstructed view of the cervix while minimizing patient discomfort.

## Key Benefits

### IMPROVED VIEW OF THE CERVIX IN ALL CASES

- ✓ Eliminates the challenge of lateral vaginal wall collapse, leading to more consistent sampling.

### LESS DISCOMFORT FOR THE PATIENT

- ✓ Design allows for a radial and even distribution of internal forces, resulting in increased patient comfort.

### EASE OF USE

- ✓ Ergonomic design aids in visualization and removes the need for specialist tables or reinsertions.

## Components

**Speculum Dilator**

**Use:** Inserted into the Petaled component with forward direct to induce opening of the petals.

### Features

- Locking Mechanism
- Ability to move single handedly

**Handle with Speculum Petals**

**Use:** Dilates the vaginal canal.

### Features

- Five petals
- Insertion diameter of 12mm
- Designated pen light space
- Comfortable to both Right and Left handed users.

## Key Features

### Comfort Centric Design

The speculum's radial opening ensures evenly distributed forces, significantly reducing patient discomfort during procedures.

### Versatile Usage

The uniquely angled handle allows for flexible usage on any surface, providing convenience and adaptability.

### Integrated Penlight Holder

Thoughtfully designed gaps between the petals minimise the risk of pinching tissue, prioritising patient safety.

### Smooth & Precise Insertion

A slim insertion point (12mm) facilitates gentle and precise placement, enhancing patient comfort.

### Enhanced Safety

The speculum's radial opening ensures evenly distributed forces, significantly reducing patient discomfort during procedures.

### Universal Adjustable Fit

The dilator offers a versatile and customisable fit, ensuring ease of use and comfort for all patients.

### Unobstructed Cervical View

The five-petaled speculum, with its radial opening, guarantees an unobstructed and comprehensive view of the cervix, enhancing diagnostic and procedural accuracy.

### Innovative Radial Speculum

Featuring a five-petaled design with rounded edges that provide a revolutionary approach to cervical procedures by cupping the cervix.
