Ohme chargers offer an EV smart charging solution for your home that protects your car, your purse and our planet.

Ohme chargers offer intelligent tech that integrates with your energy tariff allowing you to charge at the cheapest times. They're reliable, easy to use and cost effective and charges your electric EV for cheaper, which in-turn saves you £££'s per year\*\*.

Ohme chargers communicate with your car, our servers, and the National Grid, so that it can stop and start to align with periods of low demand on the grid, when prices are generally cheaper. And for extra peace of mind, their EV chargers also comply with Smart Charger Regulations.

Both Ohme chargers – Epod & our latest edition to the family the Pro use their own Ohme app to use with your Ohme charger allowing you to control the charge at your finger tip. This allows you to keep control of your costs with Ohme's max price cap setting and tracks your CO2 consumption with their 'Green Score' feature. Track your EV charging costs and energy consumption, and let clever features like 'favour greener energy' maximise both your CO2 and cost savings.

**Save money. Greener. Remote Management. Grid Balancing. Ohme Chargers.**

\*\*For most current information on the Ohme EV charger, please ask your Green Leaf EV installer or see the manufacturers website.

The Ohme app allows you to be in control of your charge at the touch of a screen.
