

2026 Pool Remodeling & Enhancement Guide

Transforming Your Backyard into a Luxury Oasis

1. Value vs. Price: The 2026 Outlook

In today's market, a pool remodel is more than a repair—it's an investment in your property's value and your lifestyle. While "budget" options exist, the true ROI comes from choosing materials and systems built to withstand Idaho's unique climate. At Idaho Pool Remodeling, we focus on **Life-Cycle Value**: spending slightly more upfront for technology that reduces chemical use, lowers energy bills, and lasts decades.

2. Core Remodeling & Resurfacing

The foundation of any transformation is the finish.

- **ecoFinish AquaBright:** The gold standard for 2026. Unlike traditional plaster, this thermal-sprayed finish is pH neutral, meaning you'll use 30%-40% fewer chemicals. It's crack-resistant, slip-resistant, and comes in designer colors that won't fade.
- **Structural Repairs:** We specialize in "mystery solving"—finding and fixing those nagging leaks or structural defects that general builders often overlook.
- **Materials:** Selection of the appropriate materials is a must! Many of the contractors from other states that don't have the experience with Idaho's weather may suggest material that is incompatible. Idaho Pool Remodeling has 25+ years of working in and around Idaho and know the materials suited for our unique environment.

3. The "Backyard Transformation" Upgrades

Modern pools are smart, efficient, and contributes to the backyard atmosphere. Consider these performance and luxury additions:

High-Performance Infrastructure

- **Variable Speed Pumps:** These are no longer optional for the savvy homeowner. They can reduce energy costs by up to 90% compared to old single-speed pumps, often paying for themselves in just a few swim seasons.
- **ProMinent Chemical Controls:** As an exclusive authorized dealer, we provide commercial-grade precision for residential pools. This system monitors your water 24/7, ensuring it's always safe and crystal clear without the "chlorine smell." Great for hotels, motels, HOA pools and apartments.

- **High-Efficiency Heaters:** Extend your swim season into the Idaho autumn with gas or electric heat pumps designed for rapid heating and low emissions.
- **Retractable Enclosures:** Why let your pool go unused 6 months out of the year? We offer retractable enclosures that add a layer of safety as well as allowing you to keep your pool open during the Idaho cold.

Atmosphere & Aesthetics

- **LED Lighting Systems:** Swap outdated bulbs for color-changing LED arrays. Create "scenes" for evening parties or quiet nights, all controlled from your phone.
- **Fire & Water Features:** Fire bowls and sheer descent waterfalls add a sensory layer to your pool. These features turn a swimming hole into a focal point of architectural beauty.
- **The Attendant Pool Automation:** The Attendant is a revolutionary automation system for residential pools. Its intuitive interface learns the patterns of your pool or spa and helps save money. With its optional chemical management system you can run your entire pool from your phone.
- **Outdoor Kitchens:** Why keep the heat of cooking inside the house during the hot summer weather? A quick upgrade is to add an outdoor kitchen. Many models are available for quick install or we can design your custom outdoor kitchen where the sky is the limit!

4. The Idaho Advantage

Why choose Idaho Pool Remodeling?

- **25+ Years of Local Expertise:** We understand how Idaho's freeze-thaw cycles affect masonry and equipment.
- **Renovation Specialists:** We aren't general builders. We focus on making existing pools better, safer, and more beautiful. It's in our name!
- **Certified Training:** We don't just fix pools; we are certified operators who understand the science of water chemistry and hydraulics.

5. Getting Started

Every backyard is unique. Our process starts with a comprehensive on-site consultation to ensure your "refresh" is built on a solid foundation.
