

LINDYSPRING^{Reg.} SYSTEMS

CC Series

Highly Efficient Softeners for the most demanding household needs

The **CC Series** water softeners represent an advanced line of water treatment systems designed to handle the most demanding household needs. Whether the water is from a municipal source or a private well, the CC Series is highly effective in removing unwanted hardness and minerals. Use it alone or in combination with a filter or neutralizer to tackle some of the most challenging water problems.

System Features:

- Modular Design
- Adjustable Regeneration Cycle Sequences
- Push-Button Simplicity
- Full Flow Bypass Valve
- Upflow Regeneration

Benefits:

- Cleaner Laundry
- Sparkling Dishes
- Improved Dining
- Plumbing Protection
- Bottom Line Savings
- Upflow Valve

For all your household water conditioning
and treatment needs, count on LindySpring.

CC Series

The **CC Series** water softeners bring household water to a new level of quality with the convenience of advanced controls and proven system performance. The metered, microprocessor-based controller and LCD display simplify system programming and operation. The CC Series does the rest.

An advanced system designed to handle the most demanding household needs.

An Advanced Control Head

The CC Series control head electronically meters water consumption and automatically initiates the regeneration cycle only when needed. The “brains” of the CC Series adjusts to your lifestyle and changing water usage, minimizing system salt and water consumption, while monitoring and recording system performance, including:

- Upflow regeneration
- Days since last regeneration
- Gallons since last regeneration
- Water flow rates
- Peak flow over last seven days
- Total days since start-up
- Total regenerations since start-up
- Total gallons used since start-up
- Program cycle times and sequence of cycles

The advanced control head also features an easy-to-read LCD display, convenient push-button interface and a manual regeneration mode.

- **Modular Design.** Provides quick servicing of the control valve. No bolts or screws mean most repairs can be done with a single wrench.
- **Adjustable Regeneration Cycle Sequences.** Programming can be adjusted to handle your exact water conditions.
- **Push-Button Simplicity.** All settings and information retrievable at your fingertips.
- **Full Flow Bypass Valve.** Easy to use, two handle bypass allows you to water the garden or yard with raw water. Large porting reduces noticeable pressure drop.
