

FOR IMMEDIATE RELEASE

Click Networks Secures Government of Canada Supply Arrangement for the Secure Endpoint Initiative

Ottawa, ON – October 7, 2024 – Click Networks, a leading Ottawa-based provider of cybersecurity and network management solutions, is proud to announce its successful qualification to the Government of Canada's Secure Endpoint Initiative (SEI) under Shared Services Canada (SSC). The SEI Supply Arrangement will enable Click Networks to provide advanced secure endpoint solutions, contributing to safeguarding Canada's digital infrastructure.

As part of the SEI program, Click Networks will deliver advanced, next-generation solutions for Endpoint Protection Platforms (EPP) and Endpoint Detection and Response (EDR) capabilities to SSC, its partners, and other government departments. The SEI is a critical element of the Government of Canada's National Cyber Security Strategy (NCSS), which aims to strengthen federal cyber systems and protect critical infrastructure while fostering economic growth and protecting Canadians online.

The Secure Endpoint Initiative (SEI) addresses the growing need for a unified and resilient cyber defense system. Currently, government departments utilize fragmented endpoint security tools, leading to inefficient and ineffective security measures across various departments and agencies. By leveraging cutting-edge technologies, including SentinelOne and Trellix, Click Networks will help centralize and streamline endpoint security for the Government of Canada, ensuring a robust defense against evolving cyber threats.

"This award is a tremendous recognition of Click Networks' capabilities and commitment to delivering cutting-edge cybersecurity solutions," said Ryan Fox, COO of Click Networks. "We are excited to support SSC and other government departments as they take critical steps to protect Canada's digital landscape. Our proven technologies, including SentinelOne and Trellix, are designed to provide seamless protection against emerging cyber threats."

SSC Contract Award Information

BPM20172 – RFSA for Secure Endpoint Initiative (SEI)

Supply Arrangement #: K000031390

Secure Endpoint Initiative Supply Arrangement for Sentinel One and Trellix Solutions

The SEI program has qualified the latest market-leading technologies to enhance SSC's enterprise-wide cybersecurity posture. It reflects Canada's continued pursuit of excellence in digital defense. By integrating SEI solutions from Click Networks', the Crown will advance its ability to detect, prevent, and respond to security incidents more effectively, addressing the most significant threat surface - the endpoint.

About Click Networks:

Click Networks is a trusted provider of innovative cybersecurity and network management solutions for the Canadian federal government. Based in Ottawa, Click Networks delivers secure and scalable solutions that meet the unique needs of its clients, helping to protect the nation's critical digital infrastructure.
