Introducing *e*Built®

**The highest-performing, most
energy-efficient home Rockwell
has ever built – standard.**

Clayton Home Building Group and Clayton Rockwell are committed to creating affordable homes for homeowners, not only through our home prices, but also by minimizing day-to-day energy expenses. In 2021, the average homeowner saw an increase of 15% in electricity costs alone. Our goal is to help homeowners be more energy efficient and save up to 50% on annual utility costs through our new housing initiative: eBuilt® Homes.

Built to the US Department of Energy's Zero Energy Ready Home™ manufactured home standards, eBuilt® homes are high-performing, energy efficient, and come ready to add a ground-based renewable solar energy system if homeowners choose to do so after purchase.
