

Vaccine Policy

At Henrietta Pediatrics we believe that vaccinations are one of the most important health-promoting intervention we perform as medical professionals, and one of the most important healthcare choices you make for your family.

Our patients follow the immunization schedule provided by the American Academy of Pediatrics. Vaccines are safe, they prevent serious illness and they save lives.

For your health and protection our entire staff is also fully immunized with all currently recommended vaccines.

If vaccinating your child on time is not part of your healthcare goal then we will not be a good fit for you.
