

## RideWithGPS links in Meetup Ride Listings

Previously, when you pasted a RideWithGPS URL into a Meetup Ride description, it was automatically detected and made active, but this is no longer the case. Here is what you should do so that the link is active when you post a ride.

1. Paste the link into the ride description.
2. Highlight and copy the link text in the description.
3. Click the link icon  in the toolbar at the top of the window.
4. Paste the link into the URL window and click OK.
