

## Product Description

The EvacONE is designed to aid in the evacuation of non-ambulant persons from child to adult, whether bedbound, sitting or collapsed, in premises where space is limited, congested hospital wards and buildings with narrow corridors or single width fire doors and fire escapes. Premises that are too narrow to allow the movement of the person on either a bed or mattress, such as nursing homes, hospitals, airplanes, trains, pubs, clubs, schools and hotels in the event of a fire or similar emergency. The EvacONE is designed to evacuate vertically both up and down staircases when lifts cannot be accessed in an emergency.

The EvacONE has a durable plastic base that allows it to move easily over nearly all types of internal floor surfaces and is robust enough to ensure patients can be moved to a safe distance over any external surfaces. The heavy-duty, Flame Retardant PVC upper is hard wearing and cleanable, an insulating 10mm layer of ALV30 foam padding between the plastic base and PVC upper ensures patient comfort. Available with optional Blizzard “Reflexcell” thermal blanket for additional protection from the elements or just to maintain patient dignity. Operator comfort and safety is ensured with the “soft touch” Hi Visibility yellow ergonomic pull straps accommodating up to 4 or more operatives. Colour coded securing cross straps with manual handling loops for repositioning and adjustable patient friendly plastic buckles. The integral foot pocket also stores the folded and rolled up EvacONE in a compact position ready for immediate deployment in an emergency.

## Features

- Wipe clean wall mounted storage.
- Durable hard plastic base to move easily over nearly all types of floor surface.
- Wipe clean Flame Retardant PVC construction.
