

Lo-Raiser

The Lo-Raiser is an innovative device to help manually raise a patient who has some lower body strength. The Lo-Raiser can also help raise patients forward in a chair to either standing or transferred to a wheelchair. The Lo-Raiser helps reduce the risk of short cuts being taken and offers a quick safer solution to manually raise from the floor or move from a confined space.

Extension handles
helps where carers
are different height to
control the patient

Patient Elevation

● **Colour coded buckles**
to make it easier for
securing a patient

● **Safety harness**
to ensure patient
stability
