

Henk de Jong

March, 2024

Henk is co-founder of 4 recently started ventures in Sweden and the US. Also, board advisor to over 10 globally operating companies. Added to that, Henk has advisory and investment board positions at 4 Venture Capital investment firms.

He started his first “venture” in 1979, at the age of 12. His school’s principal allowed him the use of the school’s first and only computer. Fascinated by this new world of coding he spent endless after-school hours on this pre IBM-PC machine. This resulted in being able to demonstrate his own created early educational software at a Dutch national conference at that age.

A decade - plus a high school diploma and an MBA - later, he co-founded straight from university an ERP (Enterprise Resource Planning) platform company. This inhouse developed platform, including a proprietary database engine, served many ‘high data intensity’ industries with software and hardware solutions.

Recent activities cover multiple industries like aviation and unmanned aerial flight, traceability and circular systems, smart cities, and semi-conductors. All with AI as an omni present factor.
