

At Limelight Medical Aesthetics, patient safety, treatment integrity, and product authenticity are central to everything we do. We are committed to providing care using verified products, medically approved devices, and evidence-based techniques.

### **Authentic Retail Products**

All skincare and retail products offered at Limelight Medical Aesthetics are purchased directly from the manufacturer or authorized distributors. This ensures product authenticity, proper storage conditions, and full traceability. We do not source products from third-party marketplaces, diversion channels, or unauthorized resellers. This protects patients from counterfeit, expired, or improperly handled products that are increasingly present in online retail environments.

### **Medical-Grade Devices & Treatments**

All in-office treatments at Limelight Medical Aesthetics are performed using FDA-cleared or FDA-approved medical devices and products, according to manufacturer guidelines and accepted clinical standards. Devices are maintained, calibrated, and operated by trained professionals in accordance with safety protocols and regulatory requirements.

### **FDA Clearance & Off-Label Use**

Many aesthetic treatments involve products or devices that are FDA-cleared or approved for specific indications or treatment areas. In medical aesthetics, it is also common and accepted practice for qualified providers to use these products or devices in off-label applications.

Off-label use refers to the application of an FDA-cleared or approved product or device in a manner not specifically listed in its labeling. This practice is legal, widely accepted in medicine, and supported by clinical research and professional consensus when performed by appropriately trained providers.

At Limelight Medical Aesthetics, any off-label use is guided by:

- Published clinical evidence
- Established safety data
- Professional guidelines
- Provider expertise and training

### **Evidence-Based Care**

Treatment protocols at Limelight Medical Aesthetics are based on:

- Current medical literature
- Clinical experience
- Professional education and training
- Manufacturer guidance
- Ongoing continuing education

Dosing, technique, and treatment planning are tailored to each patient's anatomy, goals, and safety considerations.

### **Provider Oversight & Training**

All treatments are performed under appropriate medical oversight. Providers receive ongoing training in:

- Device operation and safety
- Injectable techniques
- Complication prevention and management
- Aesthetic anatomy
- Evidence-based treatment planning

Patient safety and ethical practice guide all treatment decisions.

### **Transparency Commitment**

Additional information regarding FDA clearance or approval indications for devices and products used at Limelight Medical Aesthetics is available upon request.
