

Welcome to Lake City! Our exceptional night skies are an added feature of our beautiful mountain community. Lake City Skies will provide information on “what’s up in the sky” regarding astronomy, weather, birdwatching, and more.

During the summer season and at different times of the year, Lake City Skies will hold stargazing sessions for the public. These sessions last approximately 1½ to 2 hours. Local amateur astronomer and long-time Lake City resident Phillip Virden will show visitors what is up in the night sky as well as providing telescopic views of the Moon, planets, and other wonders of the universe.

For more information on stargazing events, please call Phillip Virden at 970-944-2548. Lake City Skies website will be available in May, 2021.
