# Early prevention, guide and interception.

A holistic approach to early intervention, combining alignment strategies with functional features.

angel aligner KiD

FOR INTERNAL USE ONLY

# More Control, Broader Possibilities and a More Comprehensive Treatment Option

We understand the importance of addressing issues of growing patients at an early stage. With Angel Aligner KiD, orthodontists have more control over their treatments, providing solutions pushing the boundaries of traditional clear aligner therapy.

The solution is about starting sooner and doing more for your patients, from correcting misalignments to incorporating functional therapies within the aligners for a comprehensive approach.
With Angel Aligner KiD, you not only align~~ing~~ teeth; you are also building the foundation for lifelong healthy smiles.

## Prevent

Develop the arch form, maintain space and align teeth.

## Guide

Guide normal eruption of permanent teeth and guide the mandible.

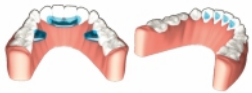

## Intercept

Discourage tongue thrust or improve tongue posture.

# More Control, Broader Possibilities and a More Comprehensive Treatment Option

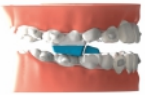

Available clinical features to incorporate into your KiD treatments.

Tongue elevator or tongue crib

Straight or inclined bite turbos

Mandibular advancement blocks

Buttons integrated into the aligner

Customizable trimline

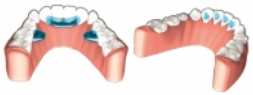

Eruption guide

Short clinical crown support

# More Control, Broader Possibilities and a More Comprehensive Treatment Option

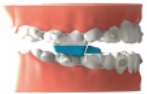

More details about the available clinical features and protocols, that you can incorporate into your KiD treatments.

Incorporate tongue crib or tongue elevator into your Angel aligners, without the need of any additional appliance or chairside procedure.

Straight bite turbos are conventionally available with clear aligner therapy, Angel Aligner inclined bite turbos are going to the next level by actively guiding the mandible forward.

A6 Mandibular advancement blocks are designed like traditional Twin Block appliances and can assist in advancing the mandible forward, without the need for an initial phase.

# More Control, Broader Possibilities and a More Comprehensive Treatment Option

More details about the available clinical features and protocols, that you can incorporate into your KiD treatments.

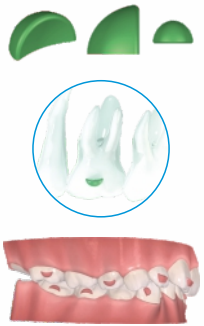

angelButton™ is integrated into the aligner and requires no chairside bonding. Because of its unique design, angelButton™ offers optimal force distribution and eliminating the compromise in aligner integrity while providing improved fit.

Customizable trimlines allow improved control over tooth movement, leading to a more personalized orthodontic treatment.

Eruption guides allow doctors to manage the alignment of erupting teeth proactively.

Dedicated KiD attachments provide optimized support for patients with short clinical crowns.

| Product System | KiD1 | KiD2* |
|---|---|---|
| Treatment Expiration Date | 2 years | 5 years |
