

Custom trimline option

Quick start guide

More control at the gingival margin—tailored to your treatment approach.

Introducing a custom trimline option that gives doctors greater control over aligner trimline length to support versatility with aesthetic preferences, comfort, and clinical flexibility.

Integrated directly into the ClinCheck® digital treatment planning workflow, extended trimline allows doctors to customize aligner design based on individual patient anatomy and retention needs.

Now in limited market release for select markets, a 1 mm extended scalloped trimline is available*.

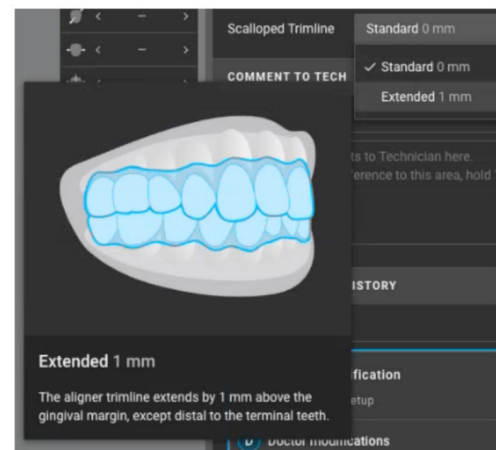

When to consider extended trimline

In cases where doctors feel there is insufficient retention, they can consider extended trimline for:

- Short clinical crowns
- Erupting dentition cases
- Preference for fewer attachments
- Extended tooth coverage in gingival recession
- Extending to include the undercut of the clinical crowns

Benefits

- **Greater control** over aligner trimline length.
- Supports versatility with aesthetic preferences, comfort and **clinical flexibility**.
- **Customization** for individual patient anatomy and retention needs.

*The 1 mm extended scalloped trimline option is currently in limited market release (LMR). Availability may vary by market and is subject to applicable regulatory approvals and clearances. Contact your local Align representative for further information.

How to order

01 Select **Modify plan**

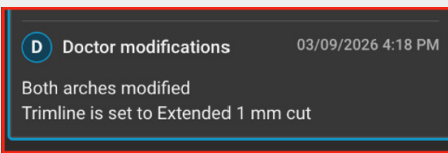

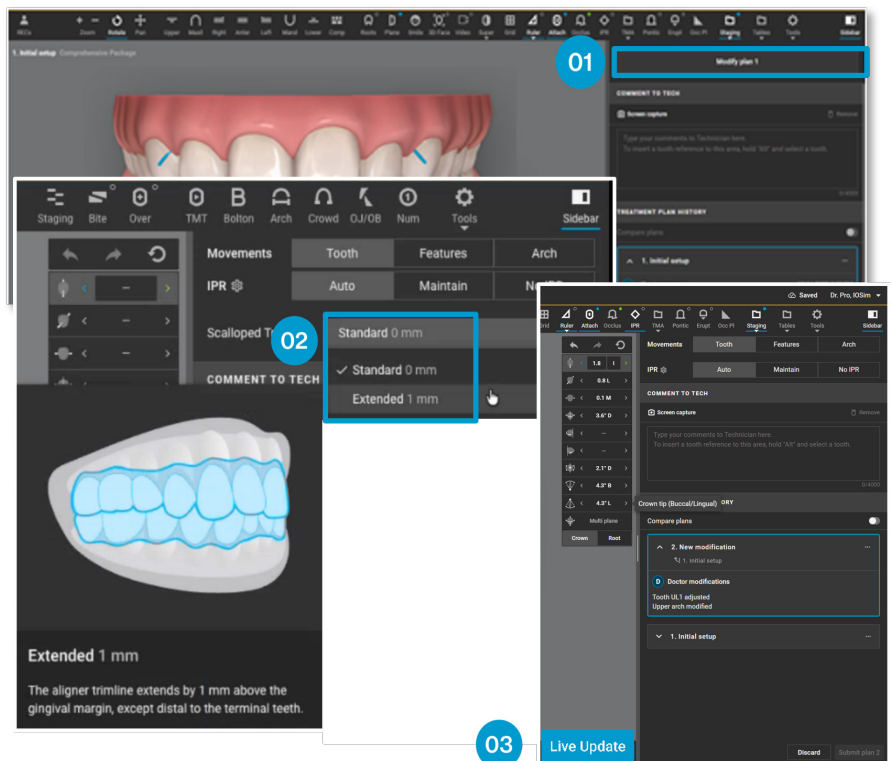

02 Select your **scalloped trimline**

- Standard (default)
 - Extended 1 mm longer* (optional)
- *applies to both arches

03 Run ClinCheck® Live Update

- **Click the Live Update button** (or send comment to CAD designer) to apply trimline option before submission or further modification.

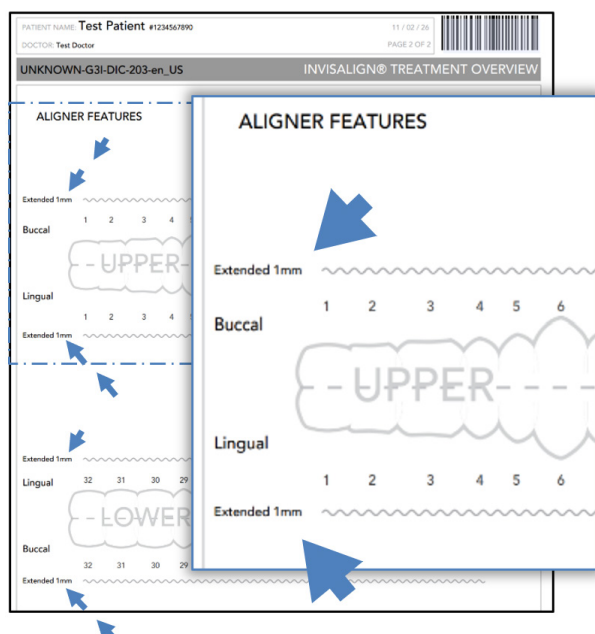

Live Update

Important note: Extended trimline is confirmed with a comment.

The extended trimline takes effect after ClinCheck Live Update is run, or a comment is sent to the CAD designer.

Trimline is indicated on the treatment overview document (see arrows below).
