

Invisalign®
integrated buttons.
The flexibility you want.
The precision you need.

Precision buttons are integrated directly with our aligners and are designed to help streamline your workflow and empower you to treat your case, your way.

**At Align Technology,
true partnership
with doctors like you
means listening to
your needs and
delivering what you
expect—and more.**

As part of our commitment to provide you with the ability to treat more complex cases—we designed the Invisalign® integrated buttons for a more flexible, precise and efficient bite correction.

Increased clinical control

Buttons can be placed buccally and/or lingually on anterior and posterior teeth including interproximal regions, enabling more customized elastic configurations and predictable treatment mechanics for a broader range of cases.

Greater practice efficiency

Buttons come welded directly onto Invisalign® aligners, eliminating the need to bond buttons on teeth—reducing chair time and streamlining treatment.

Elevated patient experience

With new integrated buttons, you can continue to provide your patients with the comfortable, seamless and efficient patient experience you expect from Invisalign treatment.
