

# Buyer Series – Session 3: Customizing Search Results

Course Notes

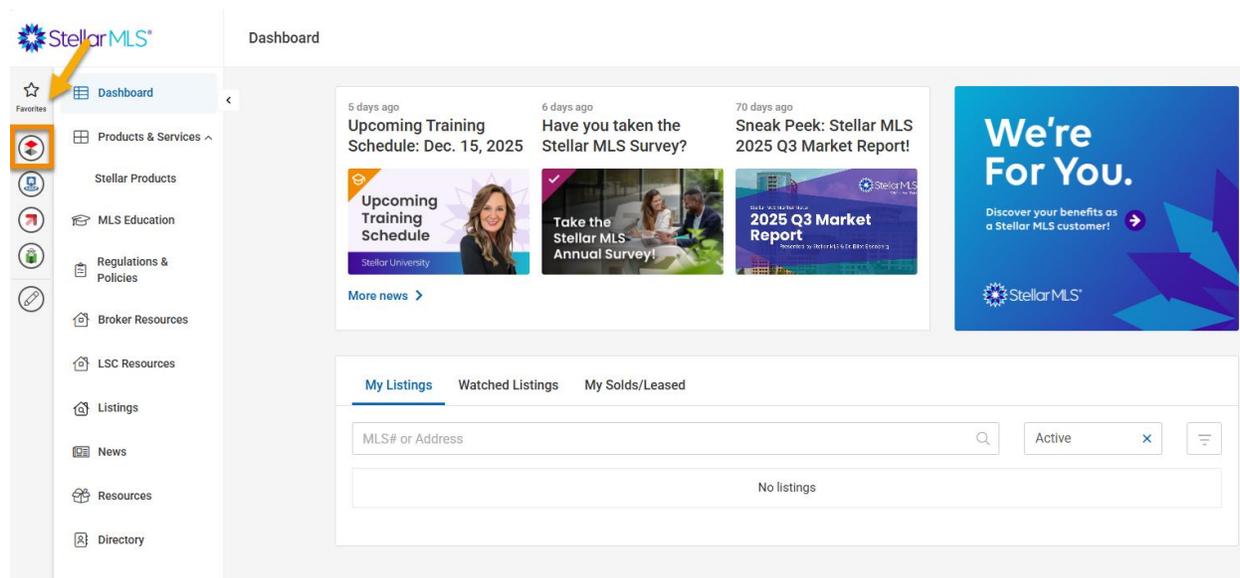

In this session, you will explore how to personalize your searching and reporting experience within Matrix. You'll learn how to set default settings for property classification searches and interactive maps, as well as how to create custom displays for your search results. By the end of the course, you'll have the tools to tailor Matrix to better fit your workflow and enhance your efficiency.

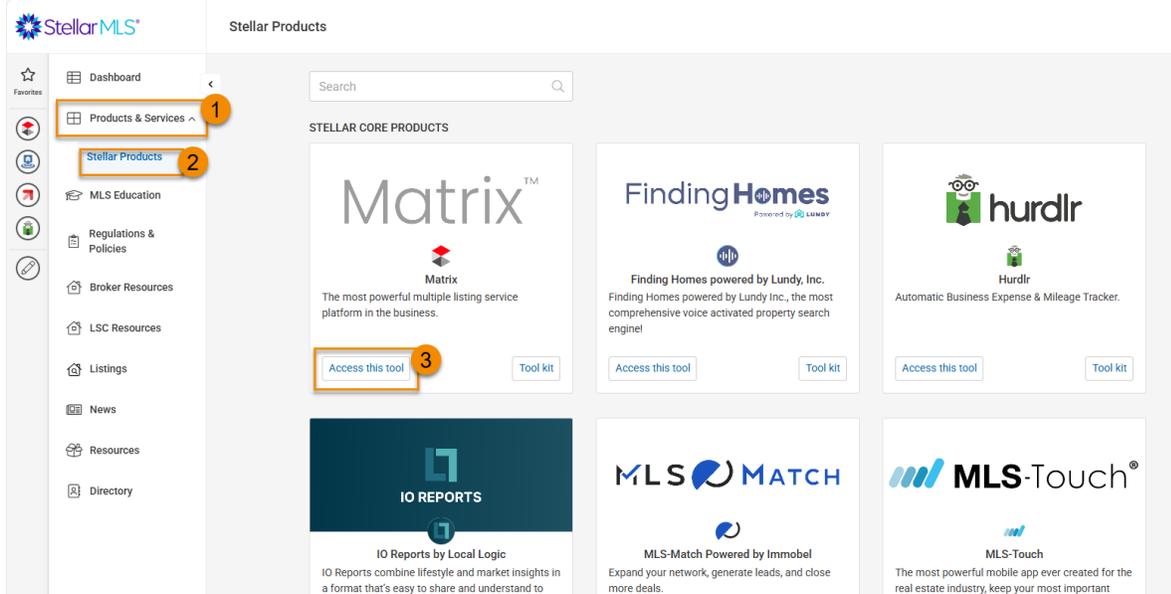

## Table of Contents

SETTING SEARCH DEFAULTS USING THE SEARCH FORM .....	2
SETTING SEARCH DEFAULTS USING THE INTERACTIVE MAP .....	4
SETTING CUSTOM DISPLAYS IN THE MATRIX RESULTS VIEW .....	9

To begin the course, you must access the Matrix platform. Once you are logged into your Stellar Central, you can access Matrix via the Favorite shortcut on the left-hand favorites menu, or by selecting Products and Services, then Stellar Products.

From there, you will see the Matrix product tile to the right of the menu. To launch the product, simply select the Access this Tool button in the bottom left corner of the tile.

This will bring you to the Matrix dashboard and ready to get started with the course curriculum. Let's dive in and explore some ways to streamline your daily work.

## Setting Search Defaults using the Search Form

Setting search defaults within Matrix is a great way to save time when you are working in a particular area. You can set the defaults using any of the search criteria available on the property classification search form. It is important to note that it is necessary to set your defaults separately to each property classification search form that you wish to have them set to. The default settings do not transfer from one search form to the other or from one property classification to another. For example, if you set a default on the Residential property search, it will not carry over to the Income property search.

To set selected criteria as your starting default, you will first want to select the type of search form you would like to use. Next, you will select the desired criteria you wish to make your defaulted options. After selecting the criteria you would like to set as your starting defaults, you will use the gear icon located in the upper right corner of the search form found under the results tab. Once you select the gear icon, you will choose the option that states, "set currently selected search criteria as my starting default". This will lock in the currently selected criteria as your starting search defaults each time you begin a new search using that search form.

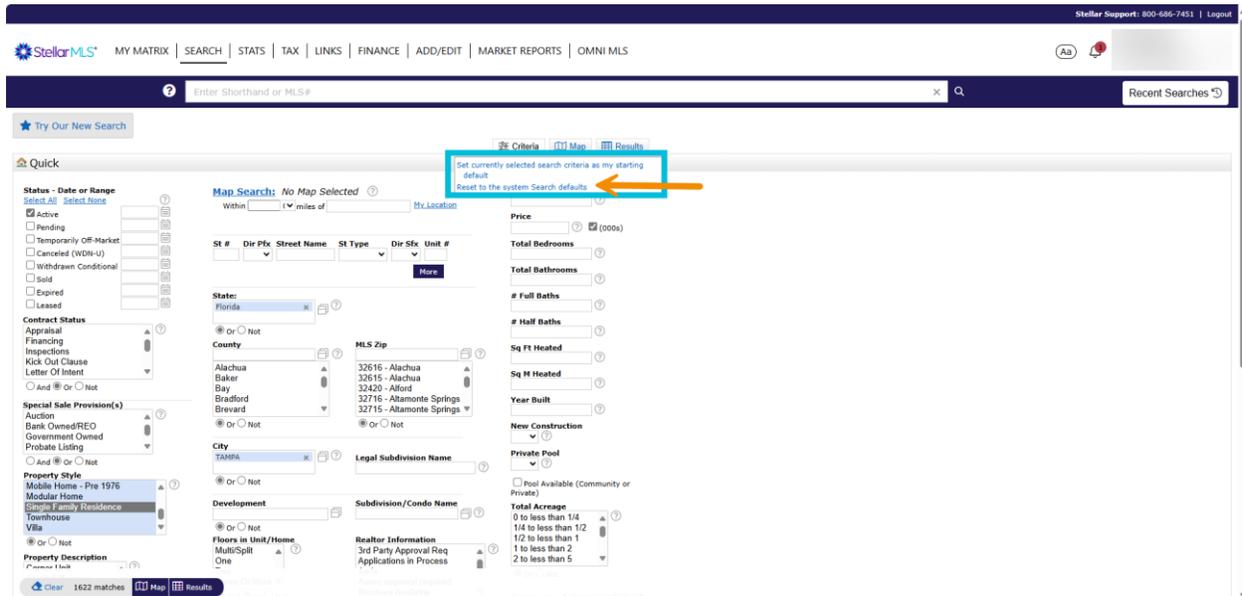

# Buyer Series – Session 3: Customizing Search Results

## Course Notes

This screenshot shows the StellarMLS search interface. The top navigation bar includes 'MY MATRIX', 'SEARCH', 'STATS', 'TAX', 'LINKS', 'FINANCE', 'ADD/EDIT', 'MARKET REPORTS', and 'OMNI MLS'. A search bar is present with the placeholder 'Enter Shorthand or MLS#'. Below the navigation, there are tabs for 'Criteria', 'Map', and 'Results'. The 'Criteria' tab is active, showing various search filters. A blue box highlights the 'City' dropdown menu, which is set to 'TAMPA'. An orange arrow points to the 'Results' tab icon in the top right corner of the search area.

This screenshot is similar to the one above, but with a tooltip visible over the 'Results' tab icon. The tooltip contains the text: 'Get currently selected search criteria as my starting default' and 'Reset to the system Search defaults'. An orange arrow points to the 'Results' tab icon.

You can reset back to the system default settings at any time. You will select the same gear icon and choose the option that states, “Reset to System Search Defaults”. This will revert to the original search defaults.

Setting these defaults can assist in streamlining your search process and save you time in the long run, however, these should ultimately be used when working in one designated location/area.

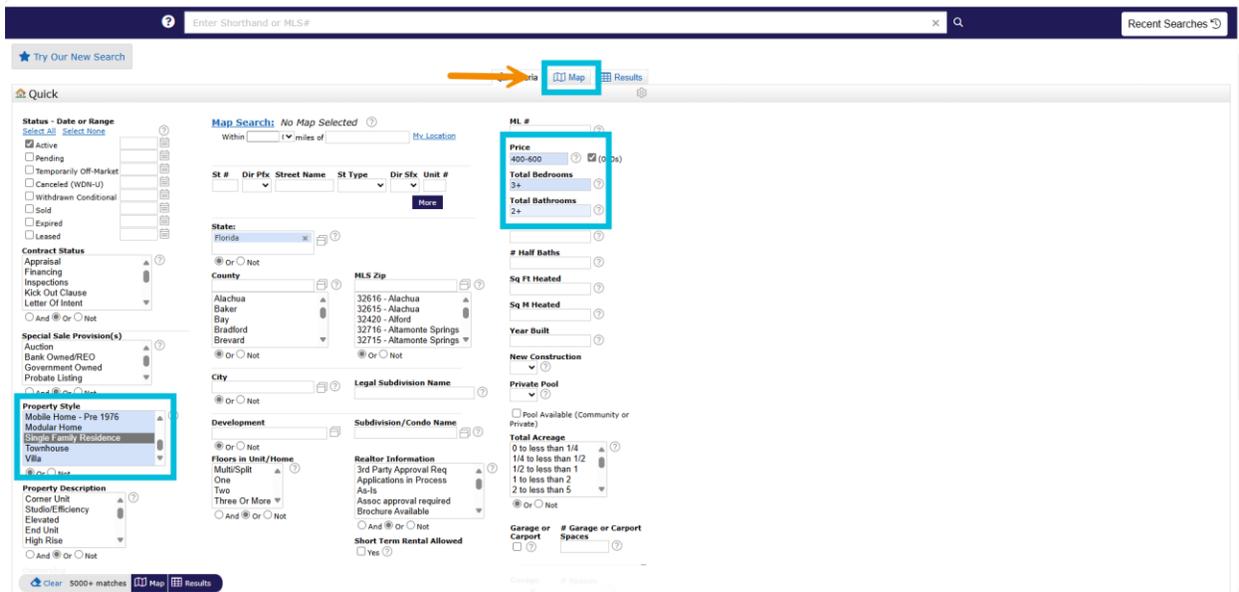

## Setting Search Defaults using the Interactive Map

Setting your search defaults can also be accomplished using the Interactive Map. Once you have determined what criteria you want to select for your search, it's as easy as setting a specific map view when viewing results.

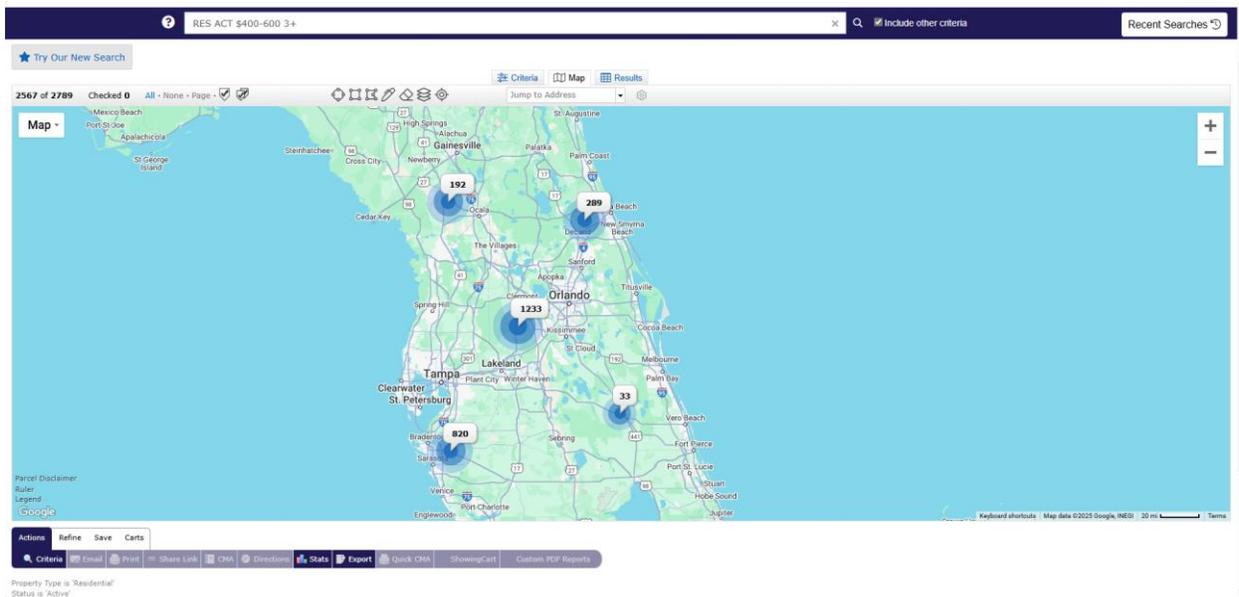

You will first want to add the criteria to your search form that matches the properties you are looking for without adding in a specific location. You will then access the Map tab along the top right side of your search form.

# Buyer Series – Session 3: Customizing Search Results

## Course Notes

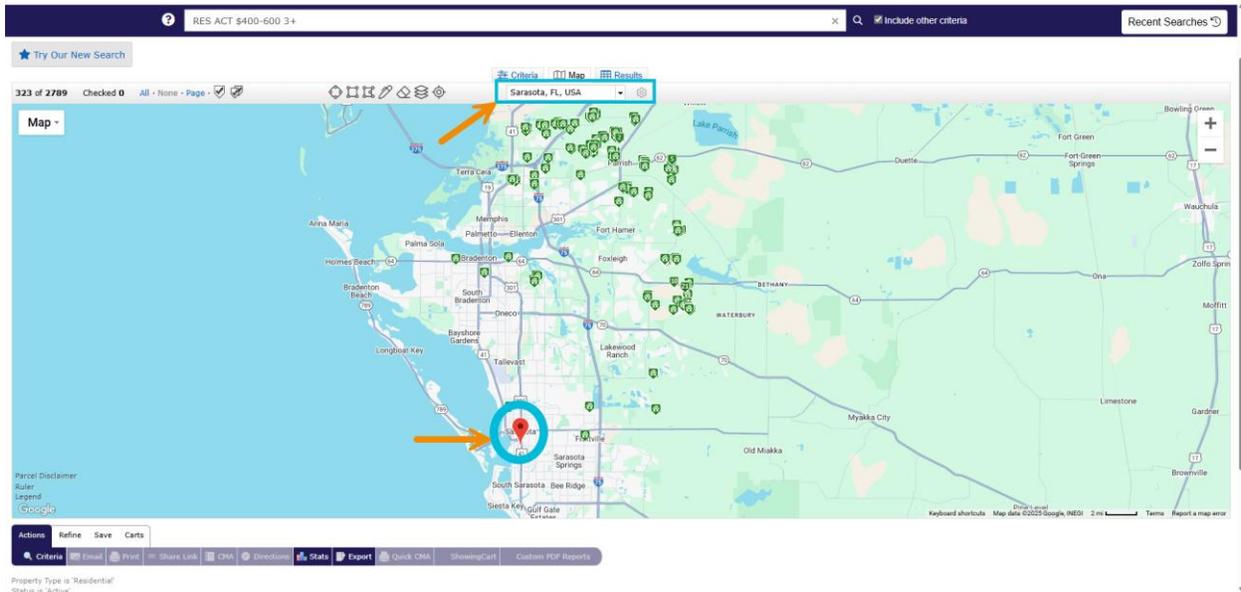

When opening to the map tab without selecting a specific area, the map will populate to the entire Stellar MLS coverage area.

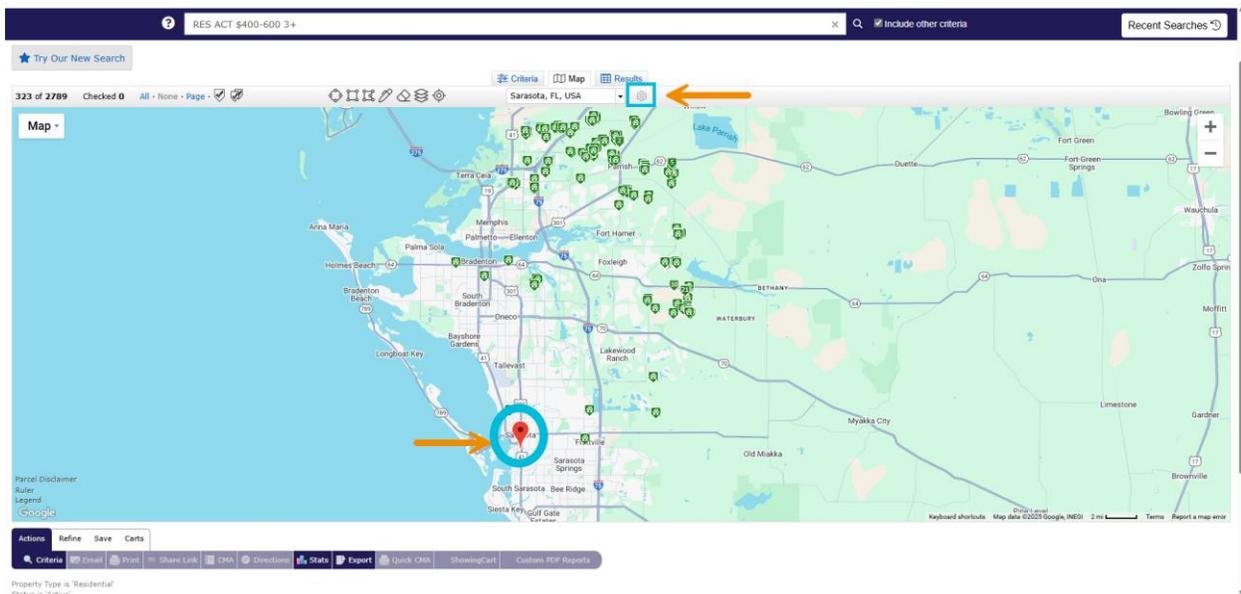

To select a particular area, use the Jump to Address function. You can select a desired search area in two different ways. First, you can type in a specific address into the Jump to Address search bar. This will place a location marker onto the interactive map for that chosen location.

# Buyer Series – Session 3: Customizing Search Results

## Course Notes

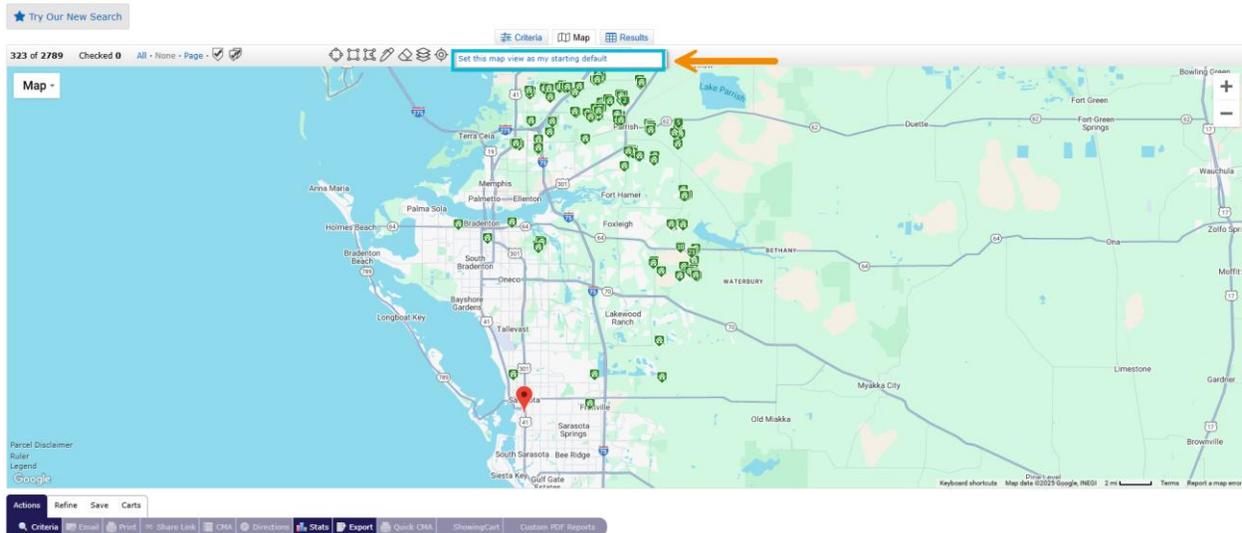

Once the location marker has been placed onto the map, if this is your desired starting default location, you can set this as your location default. To do so, you will select the gear icon that is found directly to the right of the Jump to Address bar and under the Results tab.

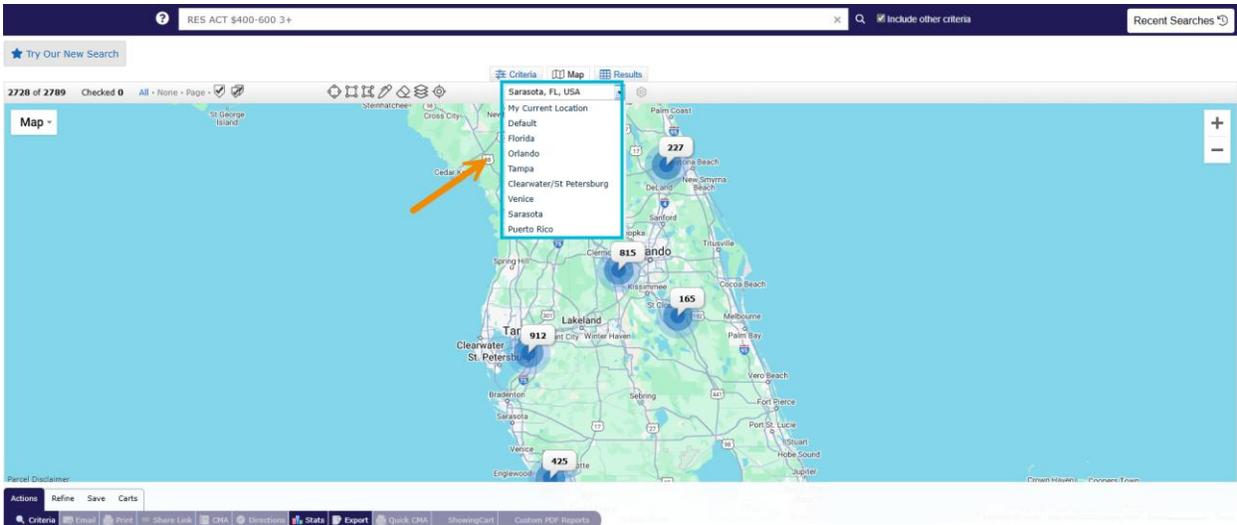

After clicking onto the gear icon, a pop-up message will appear allowing you to “Set this map view as my starting default.” Once you select this option, the map will now automatically revert to your location default when searching new properties.

# Buyer Series – Session 3: Customizing Search Results

## Course Notes

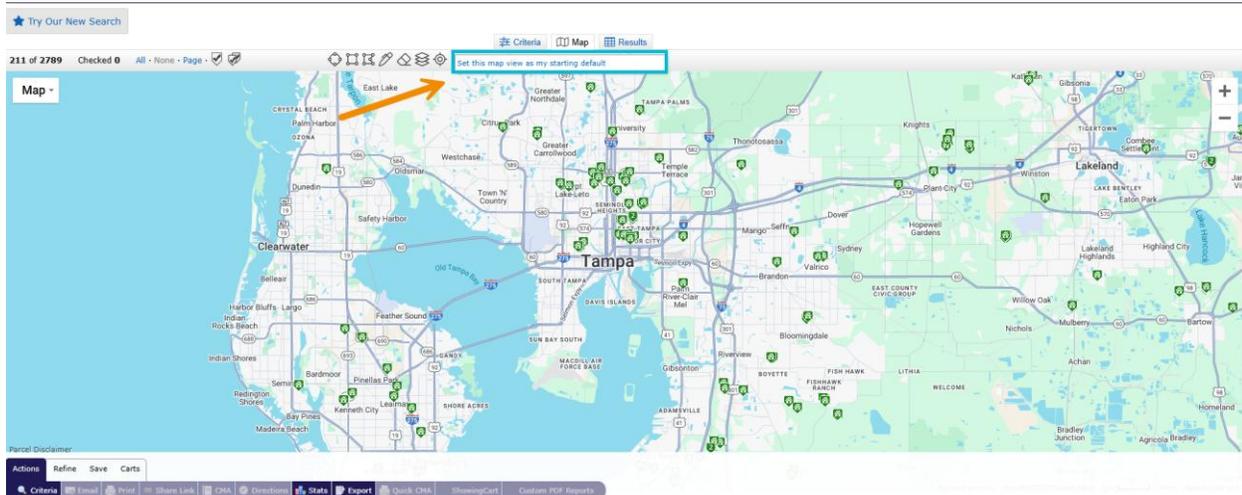

Another option when selecting your desired area is to use the drop-down menu and choose an option from there. You can select your current location, a preset default location, and from a variety of predetermined areas within the Stellar MLS coverage area.

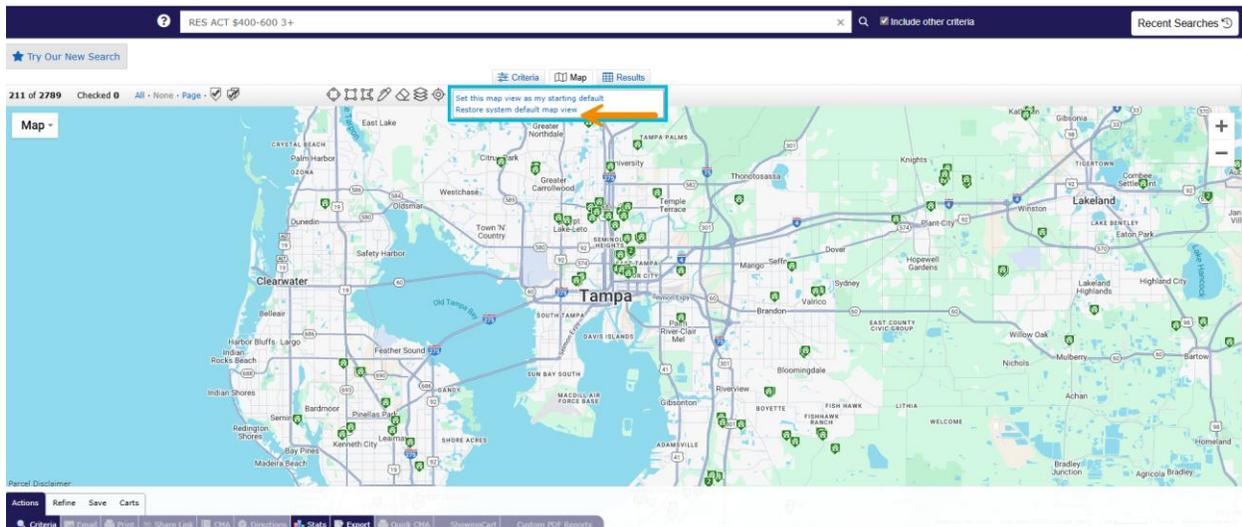

Again, once the area you wish to select as your default is being shown on the map, select the gear icon located under the results tab next to the Jump to Address search bar and select the option to “set the current map view as your starting default”.

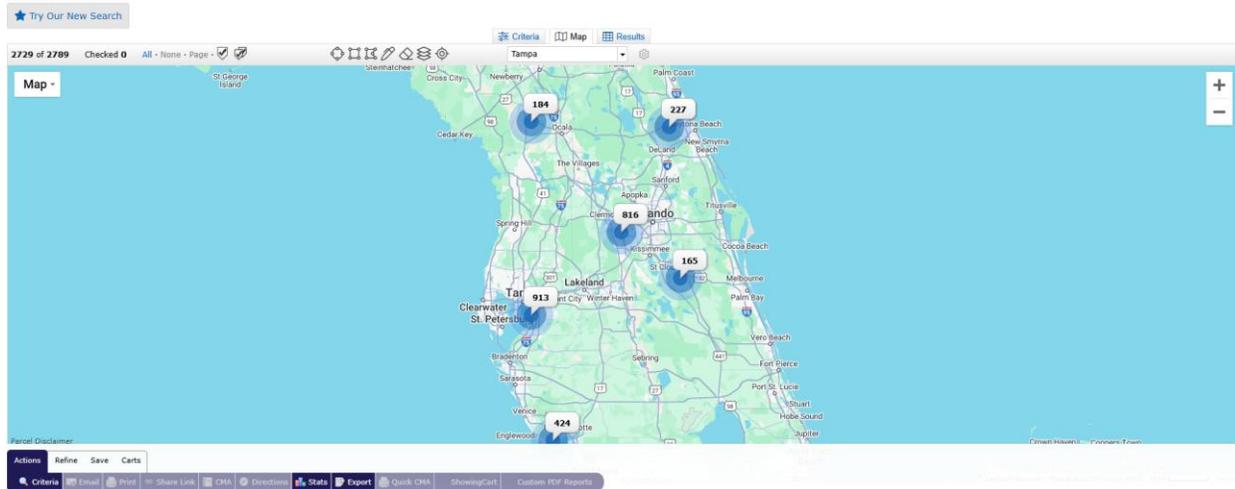

# Buyer Series – Session 3: Customizing Search Results

## Course Notes

Reverting to the system defaults is simple. You will return to the gear icon located to the right of the Jump to Address search bar and select “restore system default map view”. This will clear the previously selected defaults and return to the Stellar MLS view of the map.

## Setting Custom Displays in the Matrix Results View

When searching for specific criteria, it can be a challenge to compare the desired features of a potential listing for your buyer in one glance. There is a limited amount of information provided in the Agent Single Line Display (your default results view), and you may not want to eliminate potential matches by selecting the criteria from the search form. In these instances, you have the option to create custom displays that allow you to report numerous additional features of the listings.

One of the easiest ways to implement this strategy is to select from the predetermined list of additional display options. For example, you may want to view the first listing photo for each property. You can go to the Display drop-down menu and select the Agent Single Line w/Image display. The results will now be displayed using those defaulted options which will include the first listing photo for each property.

If you prefer, you can also customize your own display within the agent single line display to add additional fields to results that are not part of the current display you are working from.

For example, let's say you were looking up new construction properties in the Tampa area and you would like to have some additional information reported on the listings that have populated. You may want to know the Property Condition (Pre-, Under, Completed), Projected Completion Date, Builder Name, Floor Coverings, and Interior Features of each of the results. This information can be added to a custom display that you can save and use anytime you are looking at new construction homes.

The steps are easy. We will start from the Agent Single Line w/ Image display, and move to the upper right corner of the display window under the Results tab. Here, you will find the Manage Display icon (looks like a notepad and pencil). After selecting the icon, a pop-up window will appear allowing you to rename your display. For this training, I will name my display New Construction Display Training. After renaming the display, you will select the Save as a Copy option below the field.

Think of this kind of like an excel document where you can remove and/or add columns. You will take your cursor to the top of any of the columns where the column headings are listed. Your cursor will turn into a cross with arrows on the ends. Once the cursor has changed, you will left click your mouse, opening the edit menu. From here you can add or remove columns from your results display.

Once you have made all the adjustments to the display that you would like to, you can save the display to be used anytime you are looking at new construction properties. Saving the display saves you time later and allows you to create a variety of different displays to be used when reporting on various types of properties.

# Buyer Series – Session 3: Customizing Search Results

Course Notes

To save the display, you will select the same paper and pencil icon found under the Results tab. From there, you will select “Save the Changes”. This will look in the modifications that you made and will run these parameters each time you use the saved display.

Using these types and tricks can assist you in your search strategy but also help you to leverage important information about properties that allow you to convey this information to your customers.
