

VIGOR, OPTIMIZED.

WHAT IT DOES:

Nuvano BCu is designed to enhance plant vigor and reproductive performance as either a standalone application or in combination with fungicides. The complementary approach supports crop health during key developmental stages while integrating seamlessly into existing spray programs.

WHEN TO USE:

During reproductive phase or during times of disease pressure.

OPTIMIZER TECHNOLOGIES:

Chelix Technology is engineered to deliver nutrients more efficiently, loading over 200 ions per Chelix structure to keep more nutrients active, net neutral and usable in the solution.

Meld Technology uses lipophilic carriers that mimic the plant cell membranes. This allows the carrier to quickly move nutrients, crop chemistries, and biologicals across cell membranes, enhancing uptake through both leaves and roots.

Stimuli Technology is a unique biostimulant blend that helps liquid and dry fertilizers perform more efficiently, even at lower use rates. Its proprietary ingredients support root development, stress tolerance, nutrient and water efficiency, microbial activity, and greater yield potential with fewer inputs.

For more info on each technology, visit nuvano.ag.
