

HYDRATION, OPTIMIZED.

WHAT IT DOES:
 Nuvano Flux features a proprietary blend of block co-polymers designed to enhance water efficiency in furrow, side-dress, broadcast, and pivot irrigation applications. Improved water movement and distribution help maximize nutrient delivery, increase application uniformity, and support consistent crop performance.

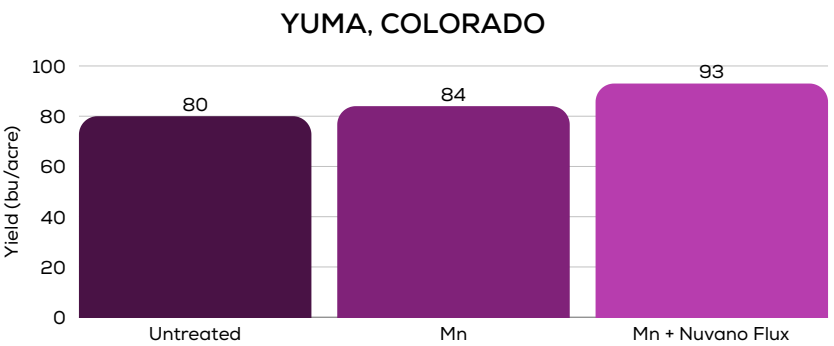

WHEN TO USE:
 When water and salt stress is a concern.

OPTIMIZER TECHNOLOGIES:

Halo.
 Halo Technology creates a microscopic film around the seed or soil particle that reduces the surface tension of soil water, allowing for superior seed-to-soil contact.

For more info on Halo technology, visit nuvano.ag.

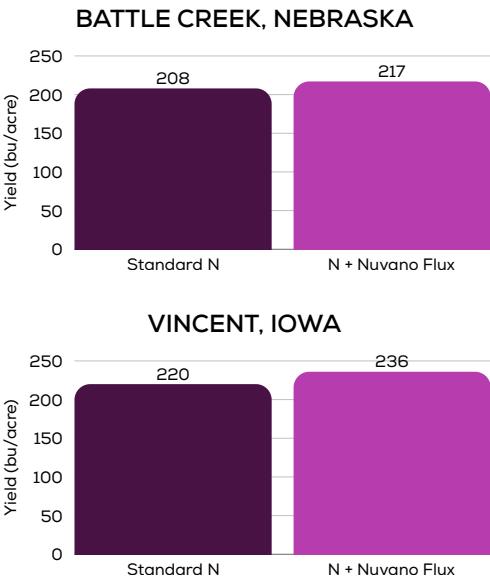

3RD PARTY DATA

RATE:

- 8-12 oz/acre in-furrow/side-dress
- 16-32 oz/acre broadcast or through pivot irrigation

NUVANO PAIRINGS:

AGRICULTURE, OPTIMIZED.
