nuvano GRIP

SPRAY, OPTIMIZED.

WHAT IT DOES:
Nuvano Grip is a premium, 2-in-1 drift-controlling methylated seed oil (MSO) formulated to optimize spray distribution, enhance coverage, and improve application efficiency. By combining a heavy-duty penetrant and a drift retardant agent (DRA) into a single jug, Grip eliminates the need for bulky, multi-product tank mixes. It reduces off-target spray fines to ensure more active ingredient hits the canopy, while its high-quality oil and surfactant blend breaks down waxy cuticles to drive chemistries deep into the leaf tissue.

WHEN TO USE:
Every liquid application of crop protection products where a Methylated Seed Oil (MSO), Crop Oil Concentrate (COC), or Drift Control Agent is required or recommended by the pesticide label.

GRIP TECHNOLOGIES:

The 2-in-1 Efficiency Advantage: Replaces the traditional "commodity MSO + standalone DRA" two-jug mix, saving you handling time, storage space, and per-acre costs without sacrificing performance.

100% Active Formulation: A highly concentrated, premium blend with 0% ineffective constituents.

Targeted Drift Control: Optimizes droplet size as the spray exits the nozzle, significantly reducing the number of driftable fines to keep your application on target and compliant.

Methylated Soybean Oil (MSO): Provides aggressive cuticular penetration to accelerate the uptake of systemic herbicides, fungicides, and insecticides.

Soy Lecithin & Surfactant Blend: Formulated with polyoxyethylene sorbitan fatty acid ester and soy lecithin to naturally improve droplet spreading, adhesion, and rainfastness.

RATE:
3–4 oz / acre
(Standard High-Efficiency Rate)
Highly concentrated for maximum performance at low use rates.

General label application range:
2–16 oz per acre.

Use in accordance with specific pesticide labeling or recommendations of a certified crop advisor.
