

Poultry Feed

Woods Laying Pellet

Product Description

Woods Laying Pellet is a complete poultry feed suitable for adult hens over 20 weeks of age, or at the point of lay, kept as a backyard flock or for commercial production. It is nutritionally balanced for protein, energy, minerals, and essential amino acids which are necessary for good hen health and egg production.

This pellet is composed of milled grains, protein meals, (soybean meal and canola meal), food by-products, (biscuit meal, millrun, etc) macro-minerals, trace minerals and fat soluble and B complex vitamins. Hens can also be fed vegetable and garden scraps.

Feeding Guidelines

Poultry should be provided with free access to feed. Typically a laying hen will consume 100 - 130 grams per day. This will vary depending on the size and breed of the poultry and general seasonal environmental conditions. Ensure that fresh, clean water is available at all times.

Typical Result* – As Fed Basis

ANALYTICAL DATA	RESULT
Crude Protein	15.0%
Moisture	11.0%
Fibre	6.53%
Fat	3.49%
