**Guide to document:**

This is all one table set with the properties to add the main header in YELLOW to every page as the table grows. So be sure when editing the document to just continue adding rows to the table rather than starting a whole new table. The dotted lines below reflect the borders I removed so that it looks like the table is separated in the above tables.

Feel free to use this area to test things out. Otherwise you can send it back over to me to make any other edits 😊

To separate different countries/regions:

1. Right click on the row you want to separate.
2. Click “Insert” Row below.
3. Highlight the top row, then Click “Merge & Center”
4. Remove left and right borders:
  - a. In the HOME tab, you will see a paint bucket button, right next to that is a grid box with a solid line on the right for borders. Make sure that the only boxes checked are the top and bottom borders; **OR...**
  - b. You can also find this option when you click on the table, in the main navigation bar next to “Review” and “View”, there will be “Table Design” button to choose. On the very left side you will see a Borders button and you can do the same thing there as well.
