AS RATE HIKES END, HISTORIC INVESTOR OPPORTUNITY MAY BEGIN

INVESTMENT INSIGHTS FROM THE CAPITAL GROUP

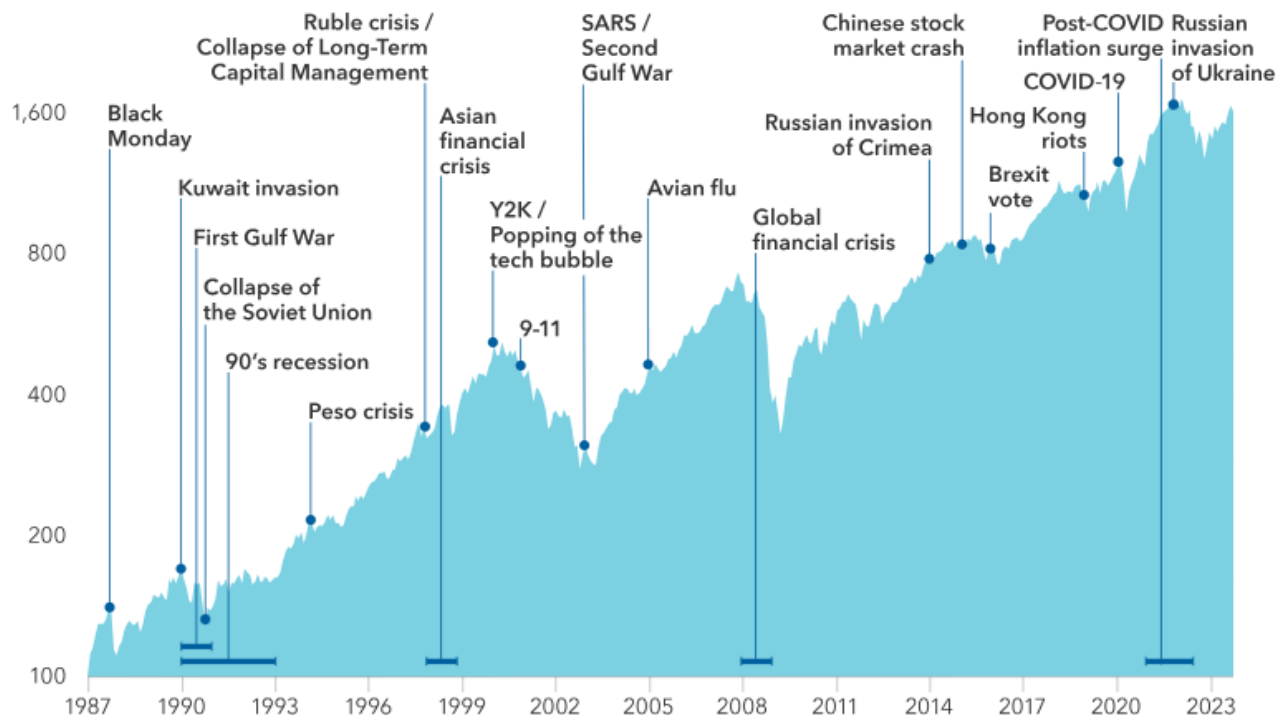

To say this has been an interesting year in financial markets is an understatement. Equities have been stronger than most expected, and the 10-year U.S. Treasury yield is up 37 basis points as of September 13. So where are we now as we head into the homestretch of 2023? I believe we're on the cusp of a major transition, one where long-term investors can find attractive income opportunities as central banks pivot from restrictive monetary policy to something that looks much more benign.

Last year was shocking to many in the investment community: It marked the first time in at least 45 years that both stocks and bonds posted negative returns in a calendar year. Battling high inflation, the Federal Reserve raised interest rates aggressively. Those hikes hurt absolute results across the board. The usual role of high-quality bonds to provide diversification from stock market volatility — something investors rely on — broke down.
