

WHAT IS CHAT GPT?

By Jake McTyre

July 9, 2023

Need a great new recipe for the friends you're hosting this evening, but you have no idea what to make? Trying to master a new hobby, but you have no clue what you are doing? Maybe you need to start writing a special letter to someone, but you are having trouble getting the ball rolling?

Don't worry. ChatGPT has you covered.

This revolutionary artificial intelligence language model has taken the world by storm. Its features and capabilities have already made it one of the most unique and useful tools ever developed. The landscape of modern business has already been changed by its ability to provide customer support, content creation, marketing, programming, and sales. With so much change happening so quickly, artificial intelligence has become one of the most controversial topics of discussion in 2023. Many people worry about its abilities to automate entire sections of the workforce, but others dream about the role it will play in developing better medicine, solving some of the planet's toughest problems, and even getting our astronauts to Mars. This tool has world-changing potential, but it can be just as useful in your everyday life as well! Here are some fun ideas to try with ChatGPT!

1. **Write a creative and original story.**

ChatGPT is an AI Language model capable of generating incredible stories or prompts for stories. Want to see what it would be like for Luke Skywalker to team up with Rihanna and James Bond on an incredible adventure? Ask Chat GPT to write a fun story for you that you can change and customize as you go.

2. **Write a letter or email.** ChatGPT can be extremely useful for communicating with others. It can draft any kind of written message you need within the parameters you set for it. It can write messages in a casual or professional tone, but make sure you try asking it to write in the voice of Edgar Allen Poe or an early Louisiana socialite as well!
3. **Learn about something incredibly specific.** If there is ever a historical event or skill you would like to learn more about, ChatGPT can eliminate all the time you would spend surfing the internet by condensing your search into exactly what you want to learn about. The conversational nature allows you to continue learning more about your chosen topic and ask questions along the way. Learn more about the potential for life on Jupiter's moon Europa or find out more about George Washington's favorite hobbies within just a few seconds.
4. **Solve a math problem.** If there is ever a calculation you are having a tough time solving, ChatGPT can likely solve it for you. It is a competent calculator, and by having a conversation with it, artificial intelligence will be able to process solutions and how to apply them.
5. **Cooking a flavorful, new dish.** ChatGPT can serve as the ultimate digital sous' chef in your kitchen. It can prompt you with new recipe ideas or give you sophisticated instructions when cooking something more challenging. Try asking it for ideas on how to make frittata with your leftover pasta.
6. **Planning your vacation.** ChatGPT can tell you just about anything you want to know about every vacation spot in the world. It can also assist you in preparing for your vacation with expense tracking, creating an itinerary, and general planning recommendations.

- 7. Learn a new language.** ChatGPT can help you learn a language by practicing your conversational skills and pronunciation. It can also help you expand your vocabulary and provide you with various options that express the same meaning. Ask it to teach you five ways to order food in Spanish!

Go ahead and give ChatGPT a try! By visiting <https://chat.openai.com/auth/login>, you can create an account for free and dive into some new learning and fun with this revolutionary resource. Like having a text message exchange with someone on your phone, ChatGPT will respond to your messages with messages of its own. The conversational format makes this tool engaging and easy to use. The next time we schedule you for a review meeting, try having ChatGPT write your response in the voice of Thomas Jefferson or Mickey Mouse!
