

# Marc Tewey | ExeGi Pharma

Marc Tewey is the Founder and CEO of ExeGi Pharma, founded in 2015 to advance scientifically validated, professionally recommended probiotic products for both human and veterinary health. Under his leadership, ExeGi has become one of the leading probiotic companies in the United States, manufacturing and distributing products grounded in rigorous clinical research and high-quality standards.

At ExeGi, Marc oversees Visbiome Vet, a top-tier veterinary supplement that is widely regarded as one of the most clinically studied and veterinarian-recommended probiotics in the animal health market. The company is also the manufacturer of one of the leading human probiotic medical food products, Visbiome, supported by over 100 human clinical trials, further underscoring ExeGi's commitment to evidence-based innovation.

In 2026, Visbiome Vet became the only probiotic blend with a formal clinical recommendation in the American College of Veterinary Internal Medicine Consensus Guideline.

ExeGi is an NASC-audited member in good standing, and Marc himself is an active member of the International Probiotics Association (IPA) as Co-Chair of the IPA Companion Animal Committee. His background includes more than two decades in probiotics, live biotherapeutics, medical foods, and rare disease therapies, including executive roles at Cambrooke Therapeutics, Cerium Pharmaceuticals, and Sigma-Tau Pharmaceuticals.

Marc holds an MBA and BA from Loyola University and is widely respected for his integrity, strategic vision, and dedication to science-backed health solutions.

## **Why I would like to serve on the NASC Board of Directors:**

I am pleased to submit my candidacy for the NASC Board of Directors. As Founder of ExeGi Pharma and the executive responsible for Visbiome Vet, I bring entrepreneurial leadership and experience in probiotics, quality standards, and regulatory strategy. ExeGi is proud to be an NASC-audited member in good standing and to contribute to innovation in both the human and veterinary probiotic sectors.

Since founding ExeGi in 2015, I have focused on developing professionally recommended probiotic products that meet high scientific, quality, and regulatory standards. Visbiome Vet has become a widely recommended and clinically evaluated veterinary probiotic, and our human probiotic medical food is supported by more than 100 clinical studies. These accomplishments reflect our commitment to quality, scientific rigor, and clinical credibility.

As an active member of the International Probiotics Association, I remain closely engaged with developments in probiotic, prebiotic, and postbiotic science, regulatory policy, and industry best practices. I believe this perspective would be valuable to NASC as the industry continues to evolve.

I am strongly aligned with NASC's mission and values and would be honored to serve on the Board of Directors. I would also welcome the opportunity to support NASC's advocacy efforts, including initiatives related to the Animal Health Supplement Act of 2026. My goal is to contribute constructively to NASC's work and help advance transparency, scientific rigor, and trust in the animal health supplement marketplace.
