

ENVIRONMENTAL MANAGEMENT POLICY

Urbnbild is committed to conducting business operations in an environmentally conscientious and sustainable manner which satisfies customer and community expectations.

Environmental management practices are incorporated into our operations with the objective of balancing operational requirements while minimizing impacts on the surrounding environment.

This will be accomplished through:

- Visible leadership and open communication throughout the business to promote environmental awareness and responsibility.
- Practical and effective systems of work which protect the environment, compliant with applicable legal obligations and client expectations.
- Induction and training that provides awareness of project requirements and individual obligations towards proactive environmental management and the potential effects of departure from procedure.
- Strong risk management practices to ensure environmental aspects are identified, assessed and managed.
- Determining our, and our customers, climate change risks and, if relevant, manage consequential risk accordingly.

Urbnbild management demonstrates commitment to this Policy through the provision of skilled, appropriately trained and qualified employees and subcontractors.
