**Contribution - is based on the fact that an investment is classified as either long/short strategy and excludes costs in the fund.

Monthly comment

Sissener Canopus continued the positive momentum from last year, and the fund was up by 3.6% in January.

The month was characterized by stronger performance in European equities than in US equities, while US markets recovered after a weaker period toward the end of last year. Geopolitical tensions and political statements from the US dominated the news flow and supported increased demand for safe havens such as gold, as well as higher oil prices. This drove particularly strong performance among energy and commodity related companies.

Equity markets posted a broader advance, with solid performance from mid-sized cyclical companies, supported by a still constructive macro backdrop and expectations of lower interest rates ahead. Within technology, performance was mixed. Semiconductor stocks delivered strong returns, while software companies were pressured by increased competition and structural changes linked to artificial intelligence.

During the month, we made several portfolio adjustments. We exited the shipping company Frontline after a month of both rising freight rates and share prices. We also realized gains in Microsoft, which has been a significant holding in the fund over time. Our assessment is that much of the optimism around artificial intelligence is now reflected in valuations, while competition in cloud services is intensifying and several players are showing higher relative growth within this core area.

ASML delivered a strong performance in January, supported by increasing optimism around global semiconductor investments driven by artificial intelligence. Solid quarterly results and clear investment signals from TSMC, the company's largest customer, pointed to high activity in next generation manufacturing capacity and provided further tailwinds for ASML's leading lithography systems. This was further confirmed in ASML's own quarterly report, which showed a clear reacceleration toward the end of 2025, with record high orders in the fourth quarter, strong interest in the company's most advanced technology, and a solid order backlog extending into 2026. Guidance points to continued growth, supported by increased adoption of new technology nodes and persistent capacity constraints across the value chain.

On the negative side in January, LVMH was among the largest negative contributors. The share price was down due to increased uncertainty around demand in the luxury segment, primarily driven by weaker consumption in China. At the same time, demand in the US and Europe showed signs of normalization.

We used the strong performance in January to reduce the fund's market exposure somewhat. The hedging positions help manage a potential increase in volatility. At the same time, we remain positive on the market outlook in the coming months, but further developments will largely depend on corporate earnings and the market's reaction.
