**Contribution - is based on the fact that an investment is classified as either long/short strategy and excludes costs in the fund.

Monthly comment

Sissener Canopus continued its upward trend in February and was up by 1.8%. The fund is now up around 5.4% year to date.

February was marked by clear regional differences. US indices struggled with a sharp rotation out of technology companies, while European markets continued their strong development. Asia stood out in particular, driven by structural demand for AI and political support that lifted several markets.

Technology heavy indices in the US had a weak month, particularly within software, where rising concerns about competition from AI based solutions weighed on companies. At the same time, market breadth improved, and more cyclical and equally weighted indices showed strength. In Europe, the positive trend continued, supported by signs of improving economic activity, especially in Germany where increased public spending is starting to have an effect. The ECB kept rates unchanged, but attention was focused on a possible leadership change.

Trade policy returned to focus after the US Supreme Court ruled that the president cannot impose tariffs unilaterally without approval from Congress, while new global tariff measures were also announced. Geopolitical tensions increased between the US and Iran following a stronger military presence and an attack carried out together with Israel. The situation remains unresolved but has pushed oil prices higher as shipping through the Strait of Hormuz has been reduced for security reasons.

Storebrand was the fund's best contributor in February. The company reported higher earnings in the fourth quarter and improvement throughout the year, driven by stronger operating results, improved margins in insurance, and growth in asset management. Assets under management increased, and return on equity improved. The company proposed a higher dividend and an expanded share buyback program, supported by a strong capital position. The share also benefited from the market rotation away from technology and into European financial and value stocks.

Deutsche Telekom was also among the largest positive contributors in February. The share was up by more than 20% during the month after the company reported better quarterly results than expected, and T Mobile's capital markets day eased concerns about increased competition in the US mobile market. We also believe that ongoing consolidation discussions in Europe and general safe haven flows supported the share price development. Our thesis on Deutsche Telekom is based on the company's unique combination of stable European telecom operations and the growth potential of T Mobile in the US.

Amazon and Vend Marketplaces were among the weakest performers in February. Both companies delivered solid quarterly results early in the month, but the share prices still came under pressure as the technology sector weakened and investors reduced exposure to growth and platform companies. We observed increasing concerns that new AI based solutions could challenge well established business models. In our view, these concerns appear exaggerated given the companies' strong market positions.

We made several adjustments to the portfolio during February. Among other changes, we fully exited our position in LVMH early in the month. The decision was driven by continued uncertainty around the Chinese consumer, particularly ahead of Chinese New Year, and an increasingly uncertain timeline for when a real recovery in Chinese consumer demand may materialize. This view was reinforced by comments from competing companies during their quarterly presentations.

Markets are currently characterized by considerable uncertainty, particularly due to the escalating conflict in the Middle East. In this context, our exposure to the energy sector has contributed positively, as higher oil prices have supported portfolio returns in recent weeks. In periods of increased market uncertainty and volatility, we believe Sissener Canopus is well positioned. The fund's hedging positions are designed specifically to handle such situations and allow us to navigate uncertainty, and potentially benefit from it, in ways that more directional portfolios cannot. At the same time, we are also ready to increase risk when we believe the timing is right.
