Performance last 12 months	-4.80 %	Sortino Ratio	1.2
Performance since inception	280.91 %		
Annual performance since inception	10.83 %		

Monthly comment

April proved to be a turbulent month for global markets, triggered by renewed geopolitical uncertainty as U.S. President Donald Trump followed through on his tariff threats against key trading partners. This led to a broad risk-off sentiment, resulting in widespread selling across asset classes. Oil markets were also affected, with the oil price dropping by \$12 during the month. The combination of macro headwinds contributed to a 4.2% decline for April. Volatility remains elevated, but this month has started on a stronger footing, and the fund has already regained a significant portion of the April drawdown.

We made a few selective adjustments to the portfolio during the month. Toward the end of April, we initiated a new position in Roche Holding AG. The company has a strong pipeline and a growing portfolio of newer drugs, now accounting for close to 60% of sales. Moreover, Roche is a global leader in diagnostic solutions for hospitals and labs—an increasingly important area within healthcare. Although its diagnostics division faces temporary pressure from recent healthcare reforms in China, we believe the stock is undervalued relative to its fundamentals and long-term prospects.

Among the top contributors in April were our short positions on the S&P 500, as well as our holding in Schibsted. Siemens Energy also delivered solid performance after issuing preliminary second-quarter results well ahead of expectations. Operating margins improved, revenue grew by more than 20%, and the company raised its full-year guidance substantially. The rally was driven by strong demand in the gas and grid services divisions, while the wind segment continues its turnaround efforts.

On the negative side, the energy sector—led by BP—was the weakest contributor in April. Oil prices fell by 16%, marking the steepest drop since 2021. The decline was primarily due to signals of increased output from OPEC and concerns over weaker demand amid global trade tensions. This had a negative impact on both our direct and indirect oil exposure. We believe Saudi Arabia has now pushed prices low enough that supply-side adjustments are likely to follow in relatively short order.

Nordic Semiconductor underperformed in April following a quarterly report that was poorly received by the market. While Q1 sales growth came in ahead of expectations, the forward guidance disappointed somewhat. Given the current uncertainty, we believe cautious guidance is reasonable. The company continues to maintain market share, which we view as a positive signal—especially as its main product, the nRF52, approaches the end of its life cycle. We expect growth and customer activity to pick up later in the year as the nRF54 product family gains traction and volumes increase.

The portfolio remains positioned in what we view as attractively priced companies—many of which are now trading at even more compelling levels than a month ago. We remain fundamentally optimistic on a company level and continue to use our flexible mandate to manage downside risk, recognizing that sentiment can shift quickly.
