Monthly comment

Sissener Canopus was up 3.8% in April, bringing the fund's year-to-date return to 10.8%, a strong start to 2026.

April was characterized by a strong rally in global equity markets, with new all-time highs in U.S. technology indices and one of the strongest monthly returns in years. European markets followed, despite weak macro data and rising concerns around growth. Long-term European government bond yields moved further higher and are now trading at multi-year highs. Geopolitics continued to dominate the news flow, and the conflict in the Middle East evolved over the course of the month. In mid-April, the U.S. signaled a blockade of the Strait of Hormuz to push Iran back to the negotiating table, but talks stalled and the oil price rose sharply before retracing somewhat into month-end. The rally in equities was at the same time driven by a relatively narrow group of companies, with the largest U.S. technology firms dominating returns and also delivering solid quarterly results.

Infineon was one of the fund's top contributors in April. The stock rose sharply during the month, driven by increased demand for power management and power semiconductor components linked to AI infrastructure. The company's position in power semiconductors makes it a central player in the transition to higher power density in data centers, as well as in vehicle electrification longer term. Our thesis on Infineon is based on its leading position in silicon carbide and industrial semiconductor content, combined with a moderate valuation relative to pure AI-exposed semiconductor names.

Marvell Technology also performed strongly in April. The stock was up more than 65%, driven by increased attention around its networking solutions and rising investments in custom silicon for the largest hyperscalers. As a pure data center play with 30-35% revenue growth and strategic partnerships with Nvidia, we continue to see Marvell well positioned in the value chain.

On the other side, Rheinmetall was among the largest detractors in April. The stock declined almost continuously through the month, despite rising tensions in the Middle East and ongoing rearmament in Europe. The main reason was market concern around the company's first quarter report, which is to some extent understandable. Our view, however, has been that fears around delays in converting the order book into actual revenue are overdone and not material to the long-term valuation of the company. We remain positive on Rheinmetall's positioning given sustained military investments in Europe, and Germany in particular.

Following the strong rally in April, market sentiment is very positive, and further upside will likely require new positive catalysts. The fund's net exposure at month-end was around 40%, largely driven by hedging positions. At the same time, we have a balanced portfolio with exposure to structural growth drivers in semiconductors and European defense, solid companies in financials and energy, and protection should volatility rise from currently low levels. We believe this is a sound strategy, and although 2026 has started strongly, we remain positive on the fund's outlook for the remainder of the year.
