Performance last 12 months	10.44 %	Sortino Ratio	1.4
Performance since inception	361.82 %		
Annual performance since inception	12.23 %		

#### Monthly comment

Sissener Canopus was up by 3.4% in July, bringing the year-to-date return to 14.3%.

July was once again shaped by developments in U.S. trade policy. President Trump extended his 90-day pause on reciprocal tariffs to August 1st, but the threat of new tariffs of up to 50% against certain countries created uncertainty. This contributed to increased volatility toward the end of the month, particularly in technology stocks and commodity-based markets.

The second-quarter earnings season also shaped the month. Many companies, particularly in the U.S., reported results that exceeded expectations. At the same time, several companies in the industrial and retail sectors highlighted margin pressure caused by rising commodity prices and existing tariffs.

Among the portfolio highlights, Vend (formerly Schibsted) delivered a strong quarter. In its Q2 report, the company reported 25% year-over-year EBITDA growth, driven by lower operating costs and a higher average revenue per ad (ARPA) across its verticals. Both cost cuts and price increases were in line with management's previously stated ambitions and were therefore well received by the market. During the quarter, Vend returned over NOK 6 billion to shareholders through buybacks and dividends. With the company's significant stake in Adevinta, we continue to see potential for further capital returns ahead.

Europriis also delivered strong second-quarter results, with like-for-like growth in Norway of 11.8%, well above expectations. A late Easter contributed positively by increasing foot traffic and raising the average basket size. In Sweden, subsidiary ÖoB reported a significantly smaller loss than expected, and the turnaround is already showing promising results. Management maintains its target of NOK 5 billion in revenue and a 5% EBIT margin in Sweden. Looking forward, we consider Europriis well positioned, with favourable prospects driven by real wage growth in Norway, lower freight costs, an increasing number of stores, and improving profitability in Sweden.

On the energy side, both BWO and BP made solid contributions. Despite OPEC's decision to restore production capacity to the oil market, oil prices have remained relatively stable. This indicates that the market had largely priced in OPEC's decision and that global demand has been stronger than expected.

On the negative side, a profit warning from Novo Nordisk weighed on the fund's performance.

Sissener Canopus delivered another positive month, and we continue to take advantage of market opportunities through carefully selected investments. At the same time, due to uncertainty related to the effects of tariffs and a generally expensive equity market, we have chosen to strengthen the fund's downside protection. This comes despite still seeing attractive opportunities in several undervalued companies. The increased hedging reflects our clear focus on risk management while maintaining significant exposure to further upside in the market. We believe this balanced approach provides a solid foundation for continued value creation going forward.
