Performance since inception	379.29 %		
Annual performance since inception	12.47 %		

**Monthly comment**

Sissener Canopus was up by 3.8% in August, bringing the year-to-date return to just over 18%.

In August, the U.S. equity market was up more than the European market, driven by the performance of large technology companies. Despite weak employment data, central bank signals of upcoming rate cuts lifted sentiment, particularly among smaller companies. In Europe, sentiment was mixed. Political uncertainty in France and ongoing diplomatic initiatives in Ukraine added to market uncertainty.

Sissener Canopus made a few adjustments in August. The fund fully exited its position in uranium supplier Cameco after a period of strong performance. The position in IWS was also sold. In addition, the fund initiated a small position in the solar energy company Scatec.

During the month, the fund entered into a short position in Equinor. The fund still maintains significant oil exposure and views this as a hedge against the oil companies we own, which are both more attractively priced and have stronger corporate governance.

Shelf Drilling was the fund's top contributor in August. The Saudi Arabian rig company ADES International Holding submitted a bid for the company at NOK 14 per share – a 61% premium to the closing price the day before the offer was announced. The acquisition was recommended by the board and will result in the company being delisted. Although the potential transaction is not expected to close until the fourth quarter, the share price traded close to the offer. We considered the outcome asymmetrical and chose to sell all shares.

Viaplay was also a solid contributor in August. Following the acquisition of the remaining 50% of Allente and several strategic initiatives, optimism around the company has continued. The share price was up strongly throughout the month, driven by increased confidence that Viaplay is on its way back to previous levels.

We continue to capitalize on market opportunities through carefully selected investments. Given the generally high valuation of equity markets, we have chosen to realize profits in several positions. Still, we continue to find attractive opportunities and maintain our active investment strategy with a clear focus on risk management.
