Sharpe Ratio	0.6	0.7
Sortino Ratio	0.6	0.6

Monthly comment

Sissener Canopus SEK-R delivered another positive month in September, as the fund was up by 0.7%, bringing the year-to-date return to 18.2%. Markets were characterized by increased macro volatility but also signs of improvement in the European economy, particularly in the euro area where activity has picked up. Central banks are nearing the end of their interest rate cut cycles, with several choosing to keep policy rates unchanged. Meanwhile, France continues to show weakness both economically and politically, while Germany stands out as a bright spot with rising public investment and expected growth. In the U.S., growth has surprised on the upside, but the labor market shows mixed signals and new tariff measures have added uncertainty to the trade outlook.

Several of the fund's positions contributed positively in September. ASML was the largest contributor, with a 30% share price increase driven by growing optimism in the semiconductor sector and strong demand related to artificial intelligence. ASML produces lithography machines used in semiconductor manufacturing, components that are essential for modern computing. The company's most advanced technology enables the production of extremely small and complex chips. The need for such semiconductors has led major producers to announce significant investments in production capacity. The largest technology companies including Microsoft, Amazon, Alphabet, and Meta are each expected to invest hundreds of billions of dollars in AI infrastructure in the coming years. ASML's unique position as the sole supplier of EUV technology makes it a key player in this development, and improvements in the supply chain have reduced uncertainty around future capacity.

Rolls Royce also delivered strong performance in September, supported by broad demand across aviation, defense, and energy systems, as well as progress within small modular reactors (SMR). Early in the month, speculation emerged regarding a potential IPO of its nuclear division after the company was selected to build the UK's first SMR project. This contributed to the share price increase, though Rolls Royce has since denied that an IPO of the SMR unit is currently being considered.

On the negative side, the main detractor from performance was the fund's hedges on Eurostoxx. This is a natural consequence of the European index rising significantly during the month.

The fund made some portfolio adjustments during September. After a long period of ownership, we chose to realize gains and fully exit Subsea 7. The investment has generated a solid return, but we now consider the stock fairly valued and see better risk-adjusted opportunities elsewhere in the energy sector. Additionally, we exited the tanker company Hafnia.

The fund's performance reflects a clear investment philosophy focused on companies with strong capital allocation, robust cash flow, and long-term strategic direction. In a market characterized by shifting sentiment and elevated volatility, the fund remains well positioned to capture both relative value opportunities and structural trends. We maintain our flexible approach and continue to seek attractive risk-adjusted returns through selective investments.
