Comment

Sissener Corporate Bond Fund NOK-R was up by 0.5% in October, bringing the year-to-date return to 7.9% in 2025.

The return was mainly driven by coupon payments but was slightly negatively affected by a repricing in one of the bonds we hold. The bond is now trading at very attractive levels, and as we are continuously considering increasing our position, we prefer not to disclose which company it concerns.

The primary market for high-yield bonds in the Nordics remains seemingly strong. In October, close to NOK 28bn of new bonds were issued, which is admittedly lower than the NOK 48bn issued in September. At the same time, we see signs that investors have become more selective on price and structure, illustrated by CMBT (formerly Euronav) choosing not to complete the refinancing of its bond as they were not satisfied with the terms offered by the market.

In the secondary market, several bonds have traded noticeably lower for various reasons, mainly among companies owned by private equity firms. They typically have negative cash flow and carry significant debt. As usual, we remain selective, and even at deep discounts, we see no reason to pick up these bonds given the current outlook for the respective companies.

We also continue to be selective in the primary market. In mid-October, Hofseth International sought to refinance a bond we held in order to issue a larger, fully secured bond. We found the new terms attractive and chose to participate, while the existing bond will be redeemed at a premium during the first week of November. Once the old bond is redeemed, our exposure to Hofseth will be just below 4% of the fund.

Over time, the Lundin-controlled oil company IPCO has been among our largest positions. When the company came to market to refinance, we chose not to participate as we did not find the compensation adequate relative to the structure and risk.

At the time of writing, the software company Infront is also in the market with a refinancing that we have chosen not to participate in, despite holding a meaningful position in the existing bond being redeemed. Infront has been part of the portfolio since the fund's inception in March 2019 and has been a strong contributor over the years. However, the company now faces challenges with organic growth, rising costs, and no longer generates positive cash flow. Combined with the fact that they are looking to increase the bond size to pay a dividend while offering a lower coupon, we no longer find the risk-reward attractive.

Other trades during the month were minor adjustments around existing positions.

At month-end, the fund's yield was 7.9% (NOK) and the credit spread around 400 basis points.
