California Proposition 65- Policy for Olympic Steel's Uncoated Flat-Rolled Products

Introduction:

Olympic Steel supplies flat-rolled metal plate, sheet, coil and blank products to a variety of industries. The types of materials supplied include carbon, alloy, aluminum and stainless steels. The metal compositions supplied are well-known materials as specified by ASTM International, the American Iron and Steel Institute (AISI) and the United States Military (MIL-specs). Products are supplied accompanied by a certificate which gives element concentrations within the product and the results of any required physical or metallurgical tests as specified on the material specification. The provision of such information has become standardized throughout the metals industry and until recently has been sufficient to satisfy the needs of our clients.

Proposition 65 Compliance: Safe Drinking Water and Toxic Enforcement Act of 1986

In order to prevent the introduction of hazardous materials into the drinking water supply in California, the state implemented legislation Proposition 65: Safe Drinking Water and Toxic Enforcement Act of 1986, which prohibits the use of these substances in products introduced into the state. Olympic Steel is a supplier of metal products to several industries which may or may not be sold in California. The list of compounds contained within the Proposition 65 have been reviewed and at this time our products are neither manufactured nor supplied with any of these listed compounds at levels above the reporting thresholds. MSDS sheets are available on all of our products. The list of elements may change periodically and our compliance will be evaluated at least annually (Last updated 05 Dec 2025) .

Please feel free to contact me with any questions and additional information regarding this policy

Sincerely:

Coady Barrie
Corporate Quality Manager
