PFAS Compliance Statement

Introduction:

Olympic Steel supplies flat-rolled metal plate, sheet, coil and blank products to a variety of industries. The types of materials supplied include carbon, alloy, aluminum and stainless steels. The metal compositions supplied are well-known materials as specified by ASTM International, the American Iron and Steel Institute (AISI) and the United States Military (MIL-specs). Products are supplied accompanied by a certificate which gives element concentrations within the product and the results of any required physical or metallurgical tests as specified on the material specification. The provision of such information has become standardized throughout the metals industry and until recently has been sufficient to satisfy the needs of our clients.

PFAS Compliance

To the best of our knowledge and based on the information provided to Olympic Steel Inc by our suppliers, the products we provide do not contain PFAS chemicals as per the latest updated publication by the USEPA dated March 2026.

Respectfully

Coady Barrie
Corporate Quality Manager.
