RoHS Compliance

Introduction: Olympic Steel supplies flat-rolled metal plate, sheet, coil and blank products to a variety of industries. The types of materials supplied include carbon, alloy, aluminum and stainless steels. The metal compositions supplied are well-known materials as specified by ASTM International, the American Iron and Steel Institute (AISI) and the United States Military (MIL-specs). Products are supplied accompanied by a certificate which gives element concentrations within the product and the results of any required physical or metallurgical tests as specified on the material specification. The provision of such information has become standardized throughout the metals industry and until recently has been sufficient to satisfy the needs of our clients.

RoHS Compliance Olympic Steel provides uncoated products that meet the requirements of Directive 2011/65/EU of European Parliament and Council of 8 June 2011 and Commission Delegated Directive (EU) 2015/863 of March 31 2015 on the restriction of the use of certain hazardous substances in electrical and electronic equipment ("RoHS Directive last published on November 21, 2025) . Products either do not contain the restricted elements or the products do not contain quantities above the specified limits. Some aluminum graded or free machining steel may fall into this category as the restricted elements are required for the product to function properly.

Some coated products that Olympic Steel sell may contain elements contained on the restricted substance list. Please review the requirements for "RoHS Directive" reporting and contact your Olympic Steel Sales Representative if you have specific questions regarding the coating that you are ordering.

Respectfully

Coady Barrie
Corporate Quality Manager
