

AIR TRANSFER GRILLES

Designed for fire-rated doors, walls, and ducts, this product allows free airflow under normal conditions. In a fire, the intumescent material expands to seal openings, forming a solid barrier.

- Fire-tested: up to 120 minutes in flexible walls/ducts (BS476: Part 20: 1987) and 60 minutes in timber doors (BS EN1634-1:2014)
- Available in various standard and custom sizes*
- Provides approximately 60% free area
- No moving parts; maintenance-free
- Slim profile (38mm thick)
- Optional decorative covers
- Easy installation in doors, walls, or ducts
- Standard finish: black; other colours available

*Confirm maximum size with door manufacturer's fire test evidence.

Blazeout as the "specialist single source supplier of firestopping and passive fire materials, fixings and ancillary products" stock a range of Air Transfer Grilles from all the leading brands.
