# WELCOME TO FRANCS ANGUS 2026 SPRING BULL AUCTION

It has been an excellent season for the bulls, with consistent rainfall providing ideal growing conditions throughout the year.

The quality of this year's offering reflects both strong genetics and a favourable season, with the bulls exhibiting excellent growth, muscle expression and overall condition.

Strong pasture availability and nutrition have allowed the bulls to maintain steady development and enter the sale season in peak condition, resulting in a quality line-up of sound, well-grown young bulls.

This years bulls are 18 months old and once again are displayed in good working order. Our bulls are not overfed and we like to describe our bulls as "fit not fat".

This years sale bulls are sired by industry leading sires, both AI and out own walking bulls. Angus stud bulls have been produced on this Jinamoc property for 70 years. We endeavour to breed cattle that are true to the Angus breed. Exceptional phenotype with, structural strength and docile temperament.

All bulls have been genomic tested and sire verified. All working together to give the best possible information.

FranCS Angus is a true family run operation, we supply quality bulls and a personal service that leaves customers satisfied.

## Health

All bulls have had 2 doses of Pestiguard, Vibrovax and 7 in 1. Bulls were drenched with Eprimectin 27/08/26.

## Caring For Your New Bull

These bulls have ran in a herd since birth and have never been alone, please have companions in the yards for them to go in with when they arrive at your farm.

## Insurance

An insurance agent will be available on sale day to organise insurance, we strongly recommend all bulls be insured for their 1st working 12 months at the fall of the hammer.

## Rebate

A 3% rebate to outside agents accompanying clients to the sale and settling within 7 days.

## Delivery

Delivery of bulls will be coordinated after the sale. Bulls are delivered free of charge in the state of Victoria.

## Fertility

We semen test ALL sale bulls. Bulls are examined by Nationwide Artificial Breeders for erection abnormalities and satisfactory sperm count specifications.

The visual test includes penile warts, hair rings, injuries and penile frenulums by undergoing a physical examination of the external genitalia and conformation. The crush side semen test involves qualified analysis of spermatozoa for motility, concentration, morphology and semen vesiculitis.

This information provides testicular and epididymal function which helps predict the potential fertility of the bull. Only bulls that pass this strict testing regime are certified and make the sale list.
