## Stingray Ballast Sweeper

The Stingray Ballast Sweeper is one of our latest developments designed to remove the loose ballast from either side of the rail line without disturbing the clips. It is designed to be used on 5 – 17 tonne excavators. It has two brushers hydraulically operated which rotate in opposite directions, sweeping the ballast away from the rail. The brush height is controlled by one hydraulic cylinder and the unit is guided along the rail by a single roller. Our latest model is fitted with a stand for ease of storage.

A bolt-on hitch arrangement is available to facilitate multiple machine pick-ups.

### Specifications:

**Motor:** 76 lt/min, 310 bar = 191RPM

*Please Note; the Stingray Ballast Sweeper is not efficient when large amounts of ballast is required to be removed from around the rail line.*
