UTILITY INDUSTRY CATALOGUE

*Products and Equipment used in the Power,
Water, Gas, and General Industries*

Products

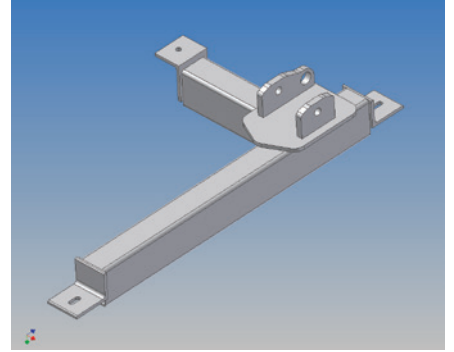

EARTH CABLES - HIGH VOLTAGE

Earth Cables used in the powerline industry which can be supplied with alternate ends and cable sizes.

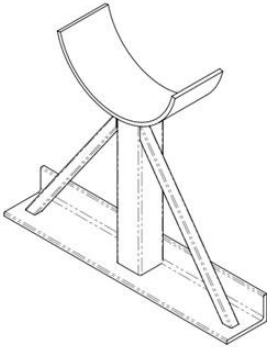

EARTH RECEPTACLE

Copper "Earth Receptacle Mounting Brackets" that can be customised to all different shapes and hole patterns.

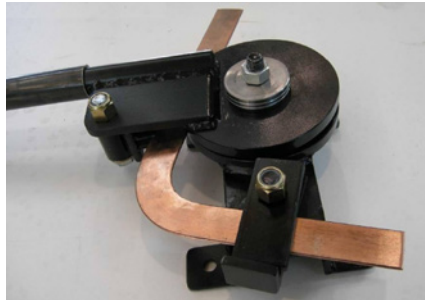

VARIOUS FALL ARREST BRACKETS

Certified Fall Arrest mounting brackets that are attached into the transformer steel structures, one style being the Maypole safety fall arrest system.

POLE DRESSING STANDS

Supports power poles when worked on in the horizontal position.

COPPER FLAT BAR BENDERS

The bender can form copper flat bar up to 60 x 6 mm wide to any angle required. Supplied with 3, 4, 5 & 6 mm x 130 spacer disks and an extension pole for ease of bending.

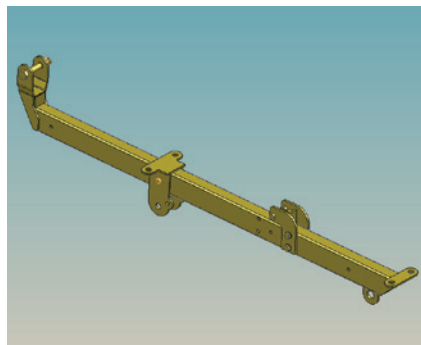

SUBSTATION STRUCTURES

The production of any type of steel structure that is required in a substation construction or refurbishment to customer's requirements.

POLE CALLIPER

Designed to provide accurate diameter measurements on poles up to 600mm. This is specifically valuable in the maintenance program for timber power poles.

LIFTING & SECURING STRUCTURES

The design, testing and production of many types of Holding Beams, Carrier Cages and any other structures required to facilitate safe and efficient high voltage tasks.

SERVICE & SPARE PARTS

A Spare Parts and Repair Service is also available for all products.

Attachments

FORK LIFTING JIB

Fork Lift mounted and includes 2t Swivel Hook. Boom angle designed to allow for increased height accessibility and flexibility of use.

RIPPER

For Excavator pick-up, strong and durable design to break up hard surfaces. Comes with replaceable tooth.

EXCAVATOR GRADER BLADE

For Excavator pick-up, ideal for cleaning up sites, form work and shoulders.

YABBY GRABS

A grab designed as a multipurpose tool for excavator use.

PIPE LIFTER

Provides safe, easy and fast pipe handling and installation. Operator does not need to be in trench and no hydraulics are required. Pipes can be tilted and maneuvered safely to avoid obstructions.

FORK GRAB

For Excavator pick-up, an efficient method of handling pallets with an excavator.

RAIL DOG

Is used as a rail mounted fall arrest device certified to Australian Standards for Industrial Arrest Systems and Devices.

RAKE / BLADE

Has a twin position hitch so that the operator is able to pick up the attachment for raking or cleaning up with the blade edge.
