- Controlled irrigation of garden areas
- Proven overload capacity due to use of twin tanks
- Sludge recycling minimises “pump-out” intervals
- Standard treatment capacity – 2000 litres per day
- Proven system – widest acceptance in Australasia
- Safe and reliable
- Quiet and odourless
- Can be retrofitted to existing septic tank system

SEPTTECH Turbojet 2000 DELUXE Wastewater Treatment System

Easily the best

If you like the idea of a two tank system then the Turbojet 2000 Deluxe is the best Wastewater Treatment Plant system for you – [PREMIUM QUALITY AND VALUE FOR MONEY.](#)

Economical

The Turbojet 2000 Deluxe is the only treatment plant designed to operate 8 hours in every 24 hour cycle – maintaining a high quality discharge.

Safe & Reliable

The pump is operated from an external control panel with an isolator switch and an inbuilt alarm, to protect the system.

To eliminate noise the pump is located below the water line. This is also an advantage in the event of a flood as the plant will be fully operational when water subsides.

The permanent precast concrete tanks are manufactured to meet or exceed AS/NZS 1546.

Peace of Mind

MCG production facility has been manufacturing concrete products for over

80 years and have moved with the latest technology to Wastewater Treatment Plants.

Septech systems have proven their performance over the last 20 years throughout Australasia

Back-up Service

Every treatment plant sold in New Zealand must be serviced by qualified MCG personnel.

Councils require this as part of their consent.

As part of MCG's ongoing service a maintenance contract will be issued with the first years service free of charge. And thereafter at an annual fee.

Environmentally Friendly

[Our Earth's future depends on how well we treat it.](#)

MCG has created a wastewater treatment system that will ensure all wastewater is treated entirely so that only clean effluent is discharged, therefore saving water and helping the environment.

Your Turbojet 2000 Deluxe will operate at its best if you use biodegradable products in your household.
