Installation Guide

North Wall (white wall)

The gallery's North wall is sheet rocked with plywood backing and studs set at 16" on center. This wall also has a track for The Gallery Hanging System set at 12' high.

Brick Walls

The gallery's brick walls primarily use The Gallery Hanging System, which is set at 12' high. Tapcons are occasionally used to install heavy items on the brick walls.

The Gallery Hanging System

The Gallery Hanging System allows for non-invasive installations with easy adjustments. Each work is hung by d-rings that are installed on the work in some fashion. A hook that is strung through a wire connects with the d-ring. The wire slots into a track that is set at 12' high on all walls.

- The weight limit of each hook is 44 pounds. Objects up to 88 pounds can be hung using two hooks and two hangers. Multiple hooks can be used on one hanger cable, with combined hanging weight not to exceed 66 pounds.
- Special consideration should be given to installing the d-rings on a work. The top of the d-ring should be sit at ~1.5" from the top of the work to prevent tipping and hide the hardware.

Pedestals and Plinths (all painted in Volland grey) (L x W x H)

Pedestals: 20 x 20 x 36" (1); 16 x 16 x 40" (1); ~16.5 x 16.5 x 36.5" (1); 12 x 12 x 12" (3)

Plinths: 7' x 6' x 9.75" (3)

Lighting

Volland has both natural and artificial lighting. All windows on the historic second story, and a majority of windows on the ground level, have shades and UV blocking film.

Volland also has an artificial lighting track on a "halo" that is ~14' above the floor. The cans can be moved on the track and are on a rheostat that can be adjusted on the ground level.

Projector, Screen, and Sound

For digital or sound works Volland has a projector, screen, and two options for sound.

- Projector: Panasonic PT-MZ670 WUXGA. Videos can be played through HDMI or disk.
- Screen: A ~121" (diagonal) screen can be lowered from the ceiling to create a backdrop for projections on the North wall. The projector can also cast directly onto the wall.
- Sound: Volland has speakers installed on the "halo" with inputs at the ground level. A hardwired sound system with PAs, subs, and monitors (plus tripods) is also available.
